

Senior Computer & AI Literacy Course for Seniors

Clean No-Photo Edition

This course teaches senior citizens how to use computers, Windows 11, the internet, email, Microsoft Office, smartphones, online banking, cybersecurity, and everyday AI. The language is simple and calm. Each lesson supports slow practice, confidence, memory, and safety.

Course Modules

- M01 Computer Fundamentals
- M02 Windows 11 Basics
- M03 Mouse & Keyboard Skills
- M04 Files & Folders
- M05 Internet Fundamentals
- M06 Web Browsers
- M07 Email
- M08 Microsoft Word
- M09 Microsoft Excel
- M10 Microsoft PowerPoint
- M11 Cloud Storage
- M12 Printing & Scanning
- M13 Android Smartphones
- M14 iPhone Basics
- M15 Digital Payments
- M16 Online Shopping
- M17 Cybersecurity
- M18 Online Banking
- M19 Artificial Intelligence
- M20 ChatGPT
- M21 Gemini
- M22 Microsoft Copilot
- M23 Deepfakes & Misinformation
- M24 Future Technology
- M25 Digital Life Mastery

M01 Computer Fundamentals

M01-L01: What Is a Computer?

Learning Objectives

By the end of this lesson, the learner will be able to:

- Understand what a computer is. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly and safely. -

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands what is a computer?, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

A computer is a machine that receives information, follows instructions, stores information, and shows results.

Important words in this lesson:

- laptop
- desktop computer
- tablet
- smartphone
- ATM
- self-checkout machine

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.
- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.
2. Look at the computer without touching anything yet.
3. Find the screen.
4. Find the keyboard.
5. Find the mouse or touchpad.
6. Find the power button, if it is visible.
7. Say aloud: "The keyboard and mouse help me give input."
8. Say aloud: "The screen shows output."
9. Look for any cable, charger, speaker, or camera.
10. Point to each part slowly.
11. Do not press unknown buttons.
12. Ask a helper if you are unsure about a part.
13. Write down three parts you can identify.
14. Rest for a moment.
15. Repeat the names once

Guided Example

Situation:

The learner wants to check a train route using Google Japan.

Guided thinking:

1. The learner uses the keyboard to type a station name.
2. The keyboard sends input to the computer.
3. The computer and website process the search.
4. The screen shows possible train routes.
5. The learner reads the result slowly.
6. The learner does not click ads or strange pop-ups.

Simple conclusion:

The computer is not magic. It follows steps. You give information. It works. It shows

Practice Exercise

Practice name: Point and Name

1. Sit near a computer.
2. Point to the screen.
3. Say "screen."
4. Point to the keyboard.
5. Say "keyboard."
6. Point to the mouse or touchpad.
7. Say "mouse" or "touchpad."
8. Point to the place where sound comes from, if you can find it.
9. Say "speaker."
10. Write down one thing each part does.

Practice goal:

Challenge Exercise

Challenge name: Explain to a Family Member

Explain this lesson to another person using only simple words.

Use this pattern:

- “This part is called ____.”
- “It helps me ____.”
- “I should use it slowly and carefully.”

Example:

“This part is called the keyboard. It helps me type words. I should use it slowly and

Common Mistakes

- Clicking too quickly before reading the screen.
- Thinking that one mistake will break the computer.
- Confusing memory and storage.
- Calling every part “the computer” without learning the part names.
- Pressing the power button when the computer is already working.
- Ignoring warning messages.
- Trusting strange pop-ups that say the computer is infected.

Troubleshooting

| Problem | What It May Mean | Safe First Action | |---|---|---| | The screen is black | The computer may be asleep, off, or not charged | Check power and ask before pressing many buttons | | The mouse does not move | The mouse may be off, disconnected, or out of battery | Check gently and try the touchpad if available | | No sound comes out |

Memory Reinforcement

Remember this simple sentence:

> Input goes in. Output comes out. Storage keeps it. Processing works on it.

Repeat this sentence three times:

1. Input goes in.
2. Output comes out.
3. Storage keeps it.
4. Processing works on it.

Memory tip:

Quick Notes

- A computer has physical parts called hardware. - Programs are called software. - The keyboard and mouse are input devices. - The screen and speakers are output devices. - Storage keeps files for later. - Memory helps with open tasks right now. - Slow

Quiz Answers

1. A computer is a machine that receives information, follows instructions, stores information, and shows results.
2. Input means giving information or instructions to the computer.

3. Output means the computer gives information back to you, such as showing it on the screen or playing sound.
4. Moving slowly helps the learner notice what changed and avoid accidental clicks.
5. Stop, do not click quickly, and ask a trusted person or check the official source.
6. One example is checking a JR train route before visiting family.
7. Computers have many small steps, and asking for help is a normal part of learning.
8. A safe habit is to pause, read the screen, and avoid clicking unknown warnings.
9. A common mistake is clicking too fast without reading the screen.
10. Repeat the simple practice, say the idea aloud, and use the quick notes as a reminder.

Flashcards

- Computer: A machine that receives information, follows instructions, stores information, and shows results.
- Hardware: The physical parts of a computer that you can touch.
- Software: Programs and instructions that tell the computer what to do.
- Input: Information you give to the computer.
- Output: Information the computer gives back to you.
- Storage: The place where files are saved for later.
- Memory: Short-term working space the computer uses while programs are open.
- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding what is a computer? using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L02: Main Parts of a Computer

Learning Objectives

By the end of this lesson, the learner will be able to:

- Name the main physical parts of a computer. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands main parts of a computer, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

A computer has parts for input, processing, storage, and output. Each part has a simple job.

Important words in this lesson:

- screen
- keyboard
- mouse
- touchpad
- CPU
- memory
- storage
- speakers
- microphone
- camera

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.

- The computer handles the words. That is processing.
- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.
2. Look at the computer without touching anything yet.
3. Find the screen.
4. Find the keyboard.
5. Find the mouse or touchpad.
6. Find the power button, if it is visible.

Summary

In this lesson, the learner practiced understanding main parts of a computer using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L03: Desktop Computers and Laptops

Learning Objectives

By the end of this lesson, the learner will be able to:

- Understand the difference between desktop and laptop computers. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands desktop computers and laptops, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Desktop computers usually stay in one place. Laptop computers are portable and include screen, keyboard, battery, and touchpad in one body.

Important words in this lesson:

- desktop PC
- laptop
- monitor
- power cable
- battery
- charger

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.

- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.

- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding desktop computers and laptops using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L04: Input Devices

Learning Objectives

By the end of this lesson, the learner will be able to:

- Understand how you give information to a computer. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands input devices, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Input devices are tools you use to send information into the computer, such as typing, clicking, touching, speaking, or scanning.

Important words in this lesson:

- keyboard
- mouse
- touchpad
- touchscreen
- microphone
- webcam
- scanner

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.
- The message may be saved in the app. That is storage.

- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.
2. Look at the computer without touching anything yet.
3. Find the screen.
4. Find the keyboard.
5. Find the mouse or touchpad.
6. Find the power button, if it is visible.
7. Say aloud: "The keyboard and mouse help me give input."
8. Say aloud: "The screen shows output."
9. Look for any cable, charger, speaker, or camera.
10. Point to each part slowly.
11. Do not press unknown buttons.
12. Ask a helper if you are unsure about a part.
13. Write down three parts you can identify.
14. Rest for a moment.
15. Repeat the names once

Guided Example

Situation:

The learner wants to check a train route using Google Japan.

Guided thinking:

1. The learner uses the keyboard to type a station name.
2. The keyboard sends input to the computer.
3. The computer and website process the search.
4. The screen shows possible train routes.
5. The learner reads the result slowly.
6. The learner does not click ads or strange pop-ups.

Simple conclusion:

The computer is not magic. It follows steps. You give information. It works. It shows

Practice Exercise

Practice name: Point and Name

1. Sit near a computer.

| Problem | What It May Mean | Safe First Action | |---|---|---| | The screen is black | The computer may be asleep, off, or not charged | Check power and ask before pressing many buttons | | The mouse does not move | The mouse may be off, disconnected, or out of battery | Check gently and try the touchpad if available | | No sound comes out |

Memory Reinforcement

Remember this simple sentence:

> Input goes in. Output comes out. Storage keeps it. Processing works on it.

Repeat this sentence three times:

1. Input goes in.
2. Output comes out.
3. Storage keeps it.
4. Processing works on it.

Memory tip:

Quick Notes

- A computer has physical parts called hardware. - Programs are called software. - The keyboard and mouse are input devices. - The screen and speakers are output devices. - Storage keeps files for later. - Memory helps with open tasks right now. - Slow

Quiz Answers

1. Input devices are tools you use to send information into the computer, such as typing, clicking, touching, speaking, or scanning.

2. Input means giving information or instructions to the computer.
3. Output means the computer gives information back to you, such as showing it on the screen or playing sound.
4. Moving slowly helps the learner notice what changed and avoid accidental clicks.
5. Stop, do not click quickly, and ask a trusted person or check the official source.
6. One example is opening a Rakuten or Mercari page carefully.
7. Computers have many small steps, and asking for help is a normal part of learning.
8. A safe habit is to pause, read the screen, and avoid clicking unknown warnings.
9. A common mistake is clicking too fast without reading the screen.
10. Repeat the simple practice, say the idea aloud, and use the quick notes as a reminder.

Flashcards

- Computer: A machine that receives information, follows instructions, stores information, and shows results.
- Hardware: The physical parts of a computer that you can touch.
- Software: Programs and instructions that tell the computer what to do.
- Input: Information you give to the computer.
- Output: Information the computer gives back to you.
- Storage: The place where files are saved for later.
- Memory: Short-term working space the computer uses while programs are open.
- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding input devices using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L05: Output Devices

Learning Objectives

By the end of this lesson, the learner will be able to:

- Understand how a computer gives information back to you. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands output devices, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Output devices show, play, print, or display results from the computer.

Important words in this lesson:

- monitor
- speakers
- printer
- headphones
- projector
- screen brightness

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.
- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

This simple pattern appears again and again in computer use.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.
2. Look at the computer without touching anything yet.
3. Find the screen.
4. Find the keyboard.
5. Find the mouse or touchpad.
6. Find the power button, if it is visible.
7. Say aloud: "The keyboard and mouse help me give input."
8. Say aloud: "The screen shows output."
9. Look for any cable, charger, speaker, or camera.
10. Point to each part slowly.
11. Do not press unknown buttons.
12. Ask a helper if you are unsure about a part.
13. Write down three parts you can identify.
14. Rest for a moment.
15. Repeat the names once

Guided Example

Situation:

The learner wants to check a train route using Google Japan.

Guided thinking:

1. The learner uses the keyboard to type a station name.
2. The keyboard sends input to the computer.
3. The computer and website process the search.
4. The screen shows possible train routes.
5. The learner reads the result slowly.
6. The learner does not click ads or strange pop-ups.

Simple conclusion:

The computer is not magic. It follows steps. You give information. It works. It shows

Practice Exercise

Practice name: Point and Name

1. Sit near a computer.
2. Point to the screen.
3. Say "screen."
4. Point to the keyboard.
5. Say "keyboard."
6. Point to the mouse or touchpad.
7. Say "mouse" or "touchpad."
8. Point to the place where sound comes from, if you can find it.
9. Say "speaker."

10. Write down one thing each part does.

Practice goal:

Challenge Exercise

Challenge name: Explain to a Family Member

Explain this lesson to another person using only simple words.

Use this pattern:

- “This part is called ____.”
- “It helps me ____.”
- “I should use it slowly and carefully.”

Example:

“This part is called the keyboard. It helps me type words. I should use it slowly and

Common Mistakes

- Clicking too quickly before reading the screen.
- Thinking that one mistake will break the computer.
- Confusing memory and storage.
- Calling every part “the computer” without learning the part names.
- Pressing the power button when the computer is already working.
- Ignoring warning messages.
- Trusting strange pop-ups that say the computer is infected.

Troubleshooting

| Problem | What It May Mean | Safe First Action | |---|---|---| | The screen is black | The computer may be asleep, off, or not charged | Check power and ask before pressing many buttons | | The mouse does not move | The mouse may be off, disconnected, or out of battery | Check gently and try the touchpad if available | | No sound comes out |

Memory Reinforcement

Remember this simple sentence:

> Input goes in. Output comes out. Storage keeps it. Processing works on it.

Repeat this sentence three times:

1. Input goes in.
2. Output comes out.
3. Storage keeps it.
4. Processing works on it.

Memory tip:

Quick Notes

- A computer has physical parts called hardware. - Programs are called software. - The keyboard and mouse are input devices. - The screen and speakers are output devices. - Storage keeps files for later. - Memory helps with open tasks right now. - Slow

Quiz Answers

1. Output devices show, play, print, or display results from the computer.
2. Input means giving information or instructions to the computer.

3. Output means the computer gives information back to you, such as showing it on the screen or playing sound.
4. Moving slowly helps the learner notice what changed and avoid accidental clicks.
5. Stop, do not click quickly, and ask a trusted person or check the official source.
6. One example is checking PayPal information without sharing a password.
7. Computers have many small steps, and asking for help is a normal part of learning.
8. A safe habit is to pause, read the screen, and avoid clicking unknown warnings.
9. A common mistake is clicking too fast without reading the screen.
10. Repeat the simple practice, say the idea aloud, and use the quick notes as a reminder.

Flashcards

- Computer: A machine that receives information, follows instructions, stores information, and shows results.
- Hardware: The physical parts of a computer that you can touch.
- Software: Programs and instructions that tell the computer what to do.
- Input: Information you give to the computer.
- Output: Information the computer gives back to you.
- Storage: The place where files are saved for later.
- Memory: Short-term working space the computer uses while programs are open.
- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding output devices using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L06: Storage and Memory

Learning Objectives

By the end of this lesson, the learner will be able to:

- Understand the difference between storage and memory. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly and

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands storage and memory, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Memory helps the computer work with open programs right now. Storage keeps files for later.

Important words in this lesson:

- RAM
- SSD
- hard drive
- USB drive
- Downloads folder
- Documents folder
- OneDrive
- Google Drive

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.

- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.
2. Look at the computer without touching anything yet.
3. Find the screen.
4. Find the keyboard.
5. Find the mouse or touchpad.
6. Find the power button, if it is visible.
7. Say aloud: "The keyboard and mouse help me give input."
8. Say aloud: "The screen shows output."
9. Look for any cable, charger, speaker, or camera.
10. Point to each part slowly.
11. Do not press unknown buttons.
12. Ask a helper if you are unsure about a part.
13. Write down three parts you can identify.
14. Rest for a moment.
15. Repeat the names once

Guided Example

Situation:

The learner wants to check a train route using Google Japan.

Guided thinking:

1. The learner uses the keyboard to type a station name.
2. The keyboard sends input to the computer.
3. The computer and website process the search.
4. The screen shows possible train routes.
5. The learner reads the result slowly.
6. The learner does not click ads or strange pop-ups.

Simple conclusion:

The computer is not magic. It follows steps. You give information. It works. It shows

Practice Exercise

Practice name: Point and Name

1. Sit near a computer.
2. Point to the screen.
3. Say "screen."
4. Point to the keyboard.
5. Say "keyboard."
6. Point to the mouse or touchpad.
7. Say "mouse" or "touchpad."
8. Point to the place where sound comes from, if you can find it.

9. Say “speaker.”

10. Write down one thing each part does.

Practice goal:

Challenge Exercise

Challenge name: Explain to a Family Member

Explain this lesson to another person using only simple words.

Use this pattern:

- “This part is called ____.”

- Memory: Short-term working space the computer uses while programs are open.
- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding storage and memory using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L07: Turning a Computer On and Off Safely

Learning Objectives

By the end of this lesson, the learner will be able to:

- Turn a computer on, restart it, and shut it down safely. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands turning a computer on and off safely, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Starting and shutting down correctly protects your files and helps the computer stay healthy.

Important words in this lesson:

- power button
- sign in screen
- Start menu
- Shut down
- Restart
- Sleep

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.

M01-L08: Understanding Programs and Apps

Learning Objectives

By the end of this lesson, the learner will be able to:

- Understand what programs and apps are. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly and safely.

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands understanding programs and apps, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Programs and apps are tools inside the computer that help you do tasks such as writing, browsing, calling, shopping, or learning.

Important words in this lesson:

- Microsoft Word
- Excel
- PowerPoint
- Google Chrome
- Microsoft Edge
- LINE
- ChatGPT

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.

- The computer handles the words. That is processing.
- The message may be saved in the app. That is storage.

M01-L09: Computer Safety and Care Basics

Learning Objectives

By the end of this lesson, the learner will be able to:

- Handle a computer safely and avoid simple damage. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill slowly

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands computer safety and care basics, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become easier.

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Computer care means using the device gently, keeping it clean, protecting it from liquids, and avoiding unsafe messages.

Important words in this lesson:

- clean hands
- dry table
- safe charging
- updates
- passwords
- scam warning

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.

- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.

Practice goal:

Challenge Exercise

Challenge name: Explain to a Family Member

Explain this lesson to another person using only simple words.

Use this pattern:

- “This part is called ____.”
- “It helps me ____.”
- “I should use it slowly and carefully.”

Example:

“This part is called the keyboard. It helps me type words. I should use it slowly and

Common Mistakes

- Clicking too quickly before reading the screen.
- Thinking that one mistake will break the computer.
- Confusing memory and storage.
- Calling every part “the computer” without learning the part names.
- Pressing the power button when the computer is already working.
- Ignoring warning messages.
- Trusting strange pop-ups that say the computer is infected.

Troubleshooting

| Problem | What It May Mean | Safe First Action | |---|---|---| | The screen is black | The computer may be asleep, off, or not charged | Check power and ask before pressing many buttons | | The mouse does not move | The mouse may be off, disconnected, or out of battery | Check gently and try the touchpad if available | | No sound comes out |

Memory Reinforcement

Remember this simple sentence:

> Input goes in. Output comes out. Storage keeps it. Processing works on it.

Repeat this sentence three times:

1. Input goes in.
2. Output comes out.
3. Storage keeps it.
4. Processing works on it.

Memory tip:

Quick Notes

- A computer has physical parts called hardware. - Programs are called software. - The keyboard and mouse are input devices. - The screen and speakers are output devices. - Storage keeps files for later. - Memory helps with open tasks right now. - Slow

Quiz Answers

1. Computer care means using the device gently, keeping it clean, protecting it from liquids, and avoiding unsafe messages.
2. Input means giving information or instructions to the computer.
3. Output means the computer gives information back to you, such as showing it on the screen or playing sound.
4. Moving slowly helps the learner notice what changed and avoid accidental clicks.
5. Stop, do not click quickly, and ask a trusted person or check the official source.
6. One example is searching Yahoo Japan or Google Japan for local clinic hours.
7. Computers have many small steps, and asking for help is a normal part of learning.
8. A safe habit is to pause, read the screen, and avoid clicking unknown warnings.
9. A common mistake is clicking too fast without reading the screen.
10. Repeat the simple practice, say the idea aloud, and use the quick notes as a reminder.

Flashcards

- Computer: A machine that receives information, follows instructions, stores information, and shows results.
- Hardware: The physical parts of a computer that you can touch.
- Software: Programs and instructions that tell the computer what to do.
- Input: Information you give to the computer.
- Output: Information the computer gives back to you.
- Storage: The place where files are saved for later.
- Memory: Short-term working space the computer uses while programs are open.
- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding computer safety and care basics using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01-L10: Computer Fundamentals Review and Confidence Practice

Learning Objectives

By the end of this lesson, the learner will be able to:

- Review the whole module and practice explaining computer basics. - Recognize important words connected to this topic. - Use simple English to explain the topic to another person. - Practice the skill

Why This Matters

Computers become easier when each part is learned one small step at a time.

This lesson matters because seniors often feel that computers are too fast, too technical, or too easy to break. The goal is not speed. The goal is calm confidence.

When the learner understands computer fundamentals review and confidence practice, future lessons about Windows 11, email, files, web browsing, online banking, smartphones, and AI become

Prerequisites

Before starting, the learner should have:

- A laptop or desktop computer nearby, if possible.
- A calm place to practice.
- Enough time to move slowly.
- Permission to ask questions.
- No pressure to finish quickly.

Lesson Content

Review helps the learner remember the big ideas: input, processing, storage, output, hardware, software, programs, and safety.

Important words in this lesson:

- review
- confidence
- practice
- family explanation
- daily routine

A computer can be understood using four simple actions:

1. Input - You give information to the computer.
2. Processing - The computer works with the information.
3. Storage - The computer saves information for later.
4. Output - The computer shows or gives the result back to you.

For example, imagine writing a short note to a family member in LINE on a computer.

- You type words with the keyboard. That is input.
- The computer handles the words. That is processing.

- The message may be saved in the app. That is storage.
- The screen shows the message. That is output.

Visual Explanation

Suggested screenshot or illustration for this lesson:

- A large labeled picture of a laptop or desktop computer.
- Clear arrows showing input, processing, storage, and output.
- A simple example showing a person typing, the computer working, and the screen showing the result.
- Large labels with high contrast and simple words.

Text description of the visual:

Step-by-Step Instructions

1. Sit comfortably in front of the computer.
2. Look at the computer without touching anything yet.
3. Find the screen.
4. Find the keyboard.
5. Find the mouse or touchpad.
6. Find the power button, if it is visible.
7. Say aloud: "The keyboard and mouse help me give input."
8. Say aloud: "The screen shows output."
9. Look for any cable, charger, speaker, or camera.
10. Point to each part slowly.
11. Do not press unknown buttons.
12. Ask a helper if you are unsure about a part.
13. Write down three parts you can identify.
14. Rest for a moment.
15. Repeat the names once

Guided Example

Situation:

The learner wants to check a train route using Google Japan.

Guided thinking:

1. The learner uses the keyboard to type a station name.
2. The keyboard sends input to the computer.
3. The computer and website process the search.
4. The screen shows possible train routes.
5. The learner reads the result slowly.
6. The learner does not click ads or strange pop-ups.

Simple conclusion:

The computer is not magic. It follows steps. You give information. It works. It shows

Practice Exercise

Practice name: Point and Name

1. Sit near a computer.
2. Point to the screen.
3. Say "screen."
4. Point to the keyboard.
5. Say "keyboard."
6. Point to the mouse or touchpad.
7. Say "mouse" or "touchpad."
8. Point to the place where sound comes from, if you can find it.

9. Say “speaker.”

10. Write down one thing each part does.

Practice goal:

Challenge Exercise

Challenge name: Explain to a Family Member

Explain this lesson to another person using only simple words.

Use this pattern:

- “This part is called ____.”
- “It helps me ____.”
- “I should use it slowly and carefully.”

Example:

“This part is called the keyboard. It helps me type words. I should use it slowly and

Common Mistakes

- Clicking too quickly before reading the screen.
- Thinking that one mistake will break the computer.
- Confusing memory and storage.
- Calling every part “the computer” without learning the part names.
- Pressing the power button when the computer is already working.
- Ignoring warning messages.
- Trusting strange pop-ups that say the computer is infected.

Troubleshooting

| Problem | What It May Mean | Safe First Action | |---|---|---| | The screen is black | The computer may be asleep, off, or not charged | Check power and ask before pressing many buttons | | The mouse does not move | The mouse may be off, disconnected, or out of battery | Check gently and try the touchpad if available | | No sound comes out |

Memory Reinforcement

Remember this simple sentence:

> Input goes in. Output comes out. Storage keeps it. Processing works on it.

Repeat this sentence three times:

1. Input goes in.
2. Output comes out.
3. Storage keeps it.
4. Processing works on it.

Memory tip:

Quick Notes

- A computer has physical parts called hardware. - Programs are called software. - The keyboard and mouse are input devices. - The screen and speakers are output devices. - Storage keeps files for later. - Memory helps with open tasks right now. - Slow

Quiz Answers

1. Review helps the learner remember the big ideas: input, processing, storage, output, hardware, software, programs, and safety.
2. Input means giving information or instructions to the computer.
3. Output means the computer gives information back to you, such as showing it on the screen or playing sound.
4. Moving slowly helps the learner notice what changed and avoid accidental clicks.
5. Stop, do not click quickly, and ask a trusted person or check the official source.
6. One example is reading a LINE message from family.
7. Computers have many small steps, and asking for help is a normal part of learning.
8. A safe habit is to pause, read the screen, and avoid clicking unknown warnings.
9. A common mistake is clicking too fast without reading the screen.
10. Repeat the simple practice, say the idea aloud, and use the quick notes as a reminder.

Flashcards

- Computer: A machine that receives information, follows instructions, stores information, and shows results.
- Hardware: The physical parts of a computer that you can touch.
- Software: Programs and instructions that tell the computer what to do.
- Input: Information you give to the computer.
- Output: Information the computer gives back to you.
- Storage: The place where files are saved for later.
- Memory: Short-term working space the computer uses while programs are open.
- Safe habit: Pause, read, and ask before clicking if something feels strange.

Summary

In this lesson, the learner practiced understanding computer fundamentals review and confidence practice using simple language and real daily examples. The most important lesson is not to rush. A computer is easier when the learner pauses, observes, and practices one small action at a time.

M01 Module Review: Computer Fundamentals

Module Review

In this module, the learner studied the basic ideas needed before using Windows 11, email, files, browsers, smartphones, online banking, and AI tools.

The main ideas are:

- A computer receives information, processes it, stores it, and shows results.
- Hardware means physical parts.
- Software means programs and instructions.
- Input means information goes into the computer.
- Output means information comes out of the computer.
- Memory helps the computer work with open programs.
- Storage keeps files for later.
- Programs and apps help people do tasks.
- Safe computer use means moving slowly, reading the screen, and avoiding suspicious messages.

What the Learner Should Be Able to Do

The learner should be able to:

1. Point to the screen, keyboard, mouse or touchpad, speaker, and power button.
2. Explain the difference between hardware and software.
3. Explain input and output in simple words.
4. Understand that storage and memory are not the same.
5. Turn a computer on and off safely with help if needed.
6. Understand that apps and programs are tools.
7. Use calm safety habits before clicking warnings or pop-ups.

Review Practice

Ask the learner to explain:

- What does the keyboard do?
- What does the screen do?
- What is a program?
- What should you do if a message feels scary?
- Why is slow practice good?

M01 Module Quiz: Computer Fundamentals

1. What is a computer?
2. What is hardware?
3. What is software?
4. What does input mean?
5. What does output mean?
6. Is a keyboard input or output?
7. Is a screen input or output?
8. What is the CPU often compared to?
9. What does storage do?
10. What does memory help with?
11. What is one example of a program or app?
12. Why should you shut down safely?
13. What should you do before clicking a scary warning?
14. Why is a laptop portable?
15. What is a touchpad used for?
16. What is one safe computer care habit?
17. Why should liquids stay away from a computer?
18. What should you do if the computer is slow?
19. What is one Japan-based service a computer can help with?
20. What is more important for a senior beginner: speed or calm accuracy?

M01 Practical Assessment: Computer Fundamentals

Goal

The learner will show that they can identify basic computer parts, explain simple computer ideas, and use safe habits.

Materials Needed

- A laptop or desktop computer
- A mouse, if available
- A charger, if available
- A notebook and pen

Assessment Tasks

1. Point to the screen.
2. Point to the keyboard.
3. Point to the mouse or touchpad.
4. Explain what input means.
5. Explain what output means.
6. Name one piece of hardware.
7. Name one example of software.
8. Explain the difference between storage and memory in simple words.
9. Turn the computer on or describe how to do it safely.
10. Describe how to shut down safely.
11. Say what to do if a scary pop-up appears.
12. Explain one way a computer can help with daily life in Japan.

Scoring

- 10 to 12 tasks completed: Strong understanding
- 7 to 9 tasks completed: Good progress; review weak areas
- 0 to 6 tasks completed: Repeat lessons slowly with guided practice

Teacher Notes

Do not punish slow answers. Give the learner time to think. The goal is calm confidence, not speed.

M01 Module Flashcards: Computer Fundamentals

- Computer: A machine that receives information, follows instructions, stores information, and shows results.
- Hardware: Physical computer parts you can touch.
- Software: Programs and instructions that tell the computer what to do.
- Input: Information or instructions going into the computer.
- Output: Information coming out of the computer.
- Keyboard: An input device used for typing.
- Mouse: An input device used for pointing and clicking.
- Touchpad: A flat mouse built into many laptops.
- Screen: An output device that shows information.
- Speakers: Output devices that play sound.
- Microphone: An input device that records voice.
- Webcam: An input device that captures video.
- CPU: The main processing part of the computer.
- Memory/RAM: Short-term working space for open programs.
- Storage: Long-term place for files.
- SSD: A common type of fast storage.
- Program/App: A tool that helps the computer do a task.
- Shutdown: Safely turning the computer off.
- Restart: Turning the computer off and on again to refresh it.
- Safe habit: Pause, read, and ask before clicking unknown warnings.

M01 Cheat Sheet: Computer Fundamentals

Big Idea

A computer follows this pattern:

1. Input goes in.
2. Processing happens.
3. Storage keeps information.
4. Output comes out.

Common Parts

Part	Simple Job
Screen	Shows information
Keyboard	Types letters and numbers
Mouse	Points and clicks
Touchpad	Moves pointer on laptop
Speakers	Play sound
Microphone	Records voice
Webcam	Captures video
Storage	Saves files
Memory	Helps open programs work
CPU	Processes instructions

Safe Habits

- Move slowly.
- Read the screen.
- Do not click scary pop-ups quickly.
- Keep drinks away from the computer.
- Shut down safely.
- Ask for help when unsure.

Japan Daily Examples

- Use Google Japan or Yahoo Japan to search.
- Use LINE to communicate with family.
- Use JR services to check train routes.
- Use Rakuten or Mercari carefully for shopping.
- Check My Number Card or government services only on official websites.

M02 Windows 11 Basics

M02-L01 Starting the Computer and Signing In

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain power button, lock screen, password or PIN, safe startup and shutdown in simple words.
2. Follow steps to turn on an HP or similar laptop and sign in without fear.
- 3.

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: The computer is like a house. The power button opens the house, the sign-in screen is the front door, and the PIN is your key.

This lesson focuses on power button, lock screen, password or PIN, safe startup and shutdown. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Starting the Computer and Signing In
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to turn on an HP or similar laptop and sign in without fear."
3. Find the part of the screen, mouse, keyboard, file, or browser related to power button.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while checking the weather for Tokyo.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while opening Yahoo! JAPAN.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for opening Yahoo! JAPAN.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> **The computer is like a house. The power button opens the house, the sign-in screen is the front door, and the

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about power button, lock screen, password or PIN, safe startup and shutdown.
2. The learner should be able to turn on an HP or similar laptop and sign in without fear.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is checking the weather for Tokyo.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Power Button
- Back: A key idea in Starting the Computer and Signing In.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line - Back: The computer is like a house. The power button opens the house, the sign-in screen is the front door, and the PIN

Summary

In this lesson, the learner practiced Starting the Computer and Signing In in M02 Windows 11 Basics. The key idea was power button, lock screen, password or PIN, safe startup and shutdown. The learner used a realistic example, such as checking the weather for Tokyo,

M02-L02 The Desktop, Taskbar, and Start Menu

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain desktop icons, taskbar, Start button, pinned apps, clock area in simple words.
2. Follow steps to recognize the main parts of the Windows 11 screen.
3. Use the skill in an

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: The desktop is your desk, the taskbar is your tool shelf, and the Start menu is the drawer where apps live.

This lesson focuses on desktop icons, taskbar, Start button, pinned apps, clock area. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Continue or ask for help

Memory picture:

The Desktop, Taskbar, and Start Menu
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to recognize the main parts of the Windows 11 screen."
3. Find the part of the screen, mouse, keyboard, file, or browser related to desktop icons.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while opening Yahoo! JAPAN.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while finding a saved Japan Rail note.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for finding a saved Japan Rail note.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> The desktop is your desk, the taskbar is your tool shelf, and the Start menu is the drawer where apps live.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about desktop icons, taskbar, Start button, pinned apps, clock area.
2. The learner should be able to recognize the main parts of the Windows 11 screen.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is opening Yahoo! JAPAN.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced The Desktop, Taskbar, and Start Menu in M02 Windows 11 Basics. The key idea was desktop icons, taskbar, Start button, pinned apps, clock area. The learner used a realistic example, such as opening Yahoo! JAPAN, and practiced safe recovery

M02-L03 Opening, Closing, and Switching Apps

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain open apps, close apps, minimize, maximize, switch with taskbar and Alt+Tab in simple words.
2. Follow steps to control simple programs without getting lost.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Apps are like open notebooks on a table. You can open one, put one aside, or close it when finished.

This lesson focuses on open apps, close apps, minimize, maximize, switch with taskbar and Alt+Tab. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Memory picture:

Opening, Closing, and Switching Apps

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to control simple programs without getting lost."
3. Find the part of the screen, mouse, keyboard, file, or browser related to open apps.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while finding a saved Japan Rail note.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while adjusting Wi-Fi at home in Japan.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for adjusting Wi-Fi at home in Japan.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Apps are like open notebooks on a table. You can open one, put one aside, or close it when finished.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about open apps, close apps, minimize, maximize, switch with taskbar and Alt+Tab.
2. The learner should be able to control simple programs without getting lost.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is finding a saved Japan Rail note.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Open Apps
- Back: A key idea in Opening, Closing, and Switching Apps.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Apps are like open notebooks on a table. You can open one, put one aside, or close it when finished.

Summary

In this lesson, the learner practiced Opening, Closing, and Switching Apps in M02 Windows 11 Basics. The key idea was open apps, close apps, minimize, maximize, switch with taskbar and Alt+Tab. The learner used a realistic example, such as finding a saved Japan Rail note,

M02-L04 Using Windows Search and Settings

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain search box, finding apps, settings app, common settings categories in simple words.
2. Follow steps to find apps and basic settings by searching instead of memorizing locations.
3. Use the skill

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Windows Search is like asking a helpful receptionist where something is.

This lesson focuses on search box, finding apps, settings app, common settings categories. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Using Windows Search and Settings
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to find apps and basic settings by searching instead of memorizing locations."
3. Find the part of the screen, mouse, keyboard, file, or browser related to search box.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while adjusting Wi-Fi at home in Japan.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while using Microsoft 365 on a Windows 11 laptop.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for using Microsoft 365 on a Windows 11 laptop.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Windows Search is like asking a helpful receptionist where something is.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about search box, finding apps, settings app, common settings categories.
2. The learner should be able to find apps and basic settings by searching instead of memorizing locations.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is adjusting Wi-Fi at home in Japan.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Summary

In this lesson, the learner practiced Using Windows Search and Settings in M02 Windows 11 Basics. The key idea was search box, finding apps, settings app, common settings categories. The learner used a realistic example, such as adjusting Wi-Fi at home in Japan, and practiced

M02-L05 Wi-Fi, Sound, Display, and Battery Basics

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain Quick Settings, Wi-Fi, volume, brightness, battery, airplane mode in simple words.
2. Follow steps to fix common comfort and connection settings.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Quick Settings is like a small control panel for daily comfort: internet, sound, screen, and power.

This lesson focuses on Quick Settings, Wi-Fi, volume, brightness, battery, airplane mode. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

Check what changed

Continue or ask for help

Memory picture:

Wi-Fi, Sound, Display, and Battery Basics
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to fix common comfort and connection settings."
3. Find the part of the screen, mouse, keyboard, file, or browser related to Quick Settings.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while using Microsoft 365 on a Windows 11 laptop.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while checking the weather for Tokyo.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for checking the weather for Tokyo.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Quick Settings is like a small control panel for daily comfort: internet, sound, screen, and power.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about Quick Settings, Wi-Fi, volume, brightness, battery, airplane mode.
2. The learner should be able to fix common comfort and connection settings.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is using Microsoft 365 on a Windows 11 laptop.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Wi-Fi, Sound, Display, and Battery Basics in M02 Windows 11 Basics. The key idea was Quick Settings, Wi-Fi, volume, brightness, battery, airplane mode. The learner used a realistic example, such as using Microsoft 365 on a Windows 11 laptop,

M02-L06 Notifications, Quick Settings, and Focus

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain notification center, reminders, calendar, focus, do not disturb in simple words.
2. Follow steps to understand messages from the computer and reduce distractions.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Notifications are like small notes. Some are useful, but too many can make learning harder.

This lesson focuses on notification center, reminders, calendar, focus, do not disturb. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action

Check what changed

Continue or ask for help

Memory picture:

Notifications, Quick Settings, and Focus
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to understand messages from the computer and reduce distractions."
3. Find the part of the screen, mouse, keyboard, file, or browser related to notification center.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while checking the weather for Tokyo.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while opening Yahoo! JAPAN.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for opening Yahoo! JAPAN.
2. Explain each step aloud.

3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Notifications are like small notes. Some are useful, but too many can make learning harder.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about notification center, reminders, calendar, focus, do not disturb.
2. The learner should be able to understand messages from the computer and reduce distractions.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is checking the weather for Tokyo.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.

10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Notification Center
- Back: A key idea in Notifications, Quick Settings, and Focus.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help

Card 5

- Front: Memory Line
- Back: Notifications are like small notes. Some are useful, but too many can make learning harder.

Summary

In this lesson, the learner practiced Notifications, Quick Settings, and Focus in M02 Windows 11 Basics. The key idea was notification center, reminders, calendar, focus, do not disturb. The learner used a realistic example, such as checking the weather for Tokyo, and practiced safe recovery

M02-L07 Restarting, Updating, and Shutting Down Safely

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain restart, update, shutdown, sleep, update warnings, patience during updates in simple words.
2. Follow steps to keep Windows healthy without interrupting updates.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Updates are like medicine for the computer. They may take time, but they help protect it.

This lesson focuses on restart, update, shutdown, sleep, update warnings, patience during updates. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

Check what changed

Continue or ask for help

Memory picture:

Restarting, Updating, and Shutting Down Safely
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to keep Windows healthy without interrupting updates."
3. Find the part of the screen, mouse, keyboard, file, or browser related to restart.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while opening Yahoo! JAPAN.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while finding a saved Japan Rail note.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for finding a saved Japan Rail note.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Updates are like medicine for the computer. They may take time, but they help protect it.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about restart, update, shutdown, sleep, update warnings, patience during updates.
2. The learner should be able to keep Windows healthy without interrupting updates.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is opening Yahoo! JAPAN.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Restart
- Back: A key idea in Restarting, Updating, and Shutting Down Safely.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

Summary

In this lesson, the learner practiced Restarting, Updating, and Shutting Down Safely in M02 Windows 11 Basics. The key idea was restart, update, shutdown, sleep, update warnings, patience during updates. The learner used a realistic example, such as opening Yahoo! JAPAN, and practiced safe recovery

M02-L08 Personalizing Windows and Accessibility

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain text size, display scale, mouse pointer size, themes, language, accessibility tools in simple words.
2. Follow steps to make Windows easier to see, hear, and use.
3. Use the skill in

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Windows 11 is the main system that controls the laptop. The learner does not need to know every setting. The learner needs to recognize common screen areas, use safe choices, and stay calm when Windows looks slightly different after updates.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Accessibility settings are like adjusting a chair and lamp before studying.

This lesson focuses on text size, display scale, mouse pointer size, themes, language, accessibility tools. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to make Windows easier to see, hear, and use."
3. Find the part of the screen, mouse, keyboard, file, or browser related to text size.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while finding a saved Japan Rail note.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while adjusting Wi-Fi at home in Japan.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for adjusting Wi-Fi at home in Japan.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Accessibility settings are like adjusting a chair and lamp before studying.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about text size, display scale, mouse pointer size, themes, language, accessibility tools.
2. The learner should be able to make Windows easier to see, hear, and use.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is finding a saved Japan Rail note.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Text Size
- Back: A key idea in Personalizing Windows and Accessibility.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Accessibility settings are like adjusting a chair and lamp before studying.

Summary

In this lesson, the learner practiced Personalizing Windows and Accessibility in M02 Windows 11 Basics. The key idea was text size, display scale, mouse pointer size, themes, language, accessibility tools. The learner used a realistic example, such as finding a saved Japan Rail note, and

M02 Module Review: Windows 11 Basics

Big Review Idea

In this module, the learner practiced the foundation skills for Windows 11 Basics. The goal was to help a new senior learner turn on a Windows 11 laptop, understand the screen, open apps, adjust basic settings, and keep the computer safe through simple update habits.

The learner does not need to remember every detail perfectly. The learner should remember the repeated safety habit:

> Do one action. Pause. Check what changed. Continue only when it makes sense.

Lessons Reviewed

- M02-L01 Starting the Computer and Signing In: power button, lock screen, password or PIN, safe startup and shutdown.
- M02-L02 The Desktop, Taskbar, and Start Menu: desktop icons, taskbar, Start button, pinned apps, clock area.
- M02-L03 Opening, Closing, and Switching Apps: open apps, close apps, minimize, maximize, switch with taskbar and Alt+Tab.
- M02-L04 Using Windows Search and Settings: search box, finding apps, settings app, common settings categories.
- M02-L05 Wi-Fi, Sound, Display, and Battery Basics: Quick Settings, Wi-Fi, volume, brightness, battery, airplane mode.
- M02-L06 Notifications, Quick Settings, and Focus: notification center, reminders, calendar, focus, do not disturb.
- M02-L07 Restarting, Updating, and Shutting Down Safely: restart, update, shutdown, sleep, update warnings, patience during updates.
- M02-L08 Personalizing Windows and Accessibility: text size, display scale, mouse pointer size, themes, language, accessibility tools.

Key Vocabulary Review

- Action: Something the learner does, such as click, type, save, search, open, close, copy, or choose.

M02 Module Quiz: Windows 11 Basics

1. Which lesson teaches about power button?
2. Which lesson teaches about desktop icons?
3. Which lesson teaches about open apps?
4. Which lesson teaches about search box?
5. Which lesson teaches about Quick Settings?
6. Which lesson teaches about notification center?
7. Which lesson teaches about restart?
8. Which lesson teaches about text size?
9. What should a learner do after each click or key press?
10. What should a learner do if a message mentions money, deletion, passwords, or installation?
11. Why is practice with harmless examples useful?
12. What is more important for senior beginners: speed or accuracy?
13. Why should lesson notes use simple words?
14. What is one sign the learner should ask for help?
15. How can the learner remember the module?
16. What is the Start menu used for?
17. Why should Windows updates not be ignored forever?
18. What can accessibility settings help with?
19. Why should you close apps you are not using?
20. What should you check if Wi-Fi is not working?

M02 Practical Assessment: Windows 11 Basics

Assessment Purpose

This practical assessment checks whether the learner can use the module skills in real life, not only remember quiz answers. The teacher should allow extra time and should not interrupt too quickly. The learner may use the cheat sheet.

Setup

- Use a Windows 11 computer.
- Use practice files, practice websites, or harmless settings.
- Do not use real bank accounts, payments, private medical records, or important official forms during assessment.
- Keep the environment calm and quiet.

Assessment Tasks

1. Demonstrate one safe action from M02-L01 Starting the Computer and Signing In and explain what changed on the screen.
2. Demonstrate one safe action from M02-L02 The Desktop, Taskbar, and Start Menu and explain what changed on the screen.
3. Demonstrate one safe action from M02-L03 Opening, Closing, and Switching Apps and explain what changed on the screen.
4. Demonstrate one safe action from M02-L04 Using Windows Search and Settings and explain what changed on the screen.
5. Demonstrate one safe action from M02-L05 Wi-Fi, Sound, Display, and Battery Basics and explain what changed on the screen.
6. Demonstrate one safe action from M02-L06 Notifications, Quick Settings, and Focus and explain what changed on the screen.
7. Demonstrate one safe action from M02-L07 Restarting, Updating, and Shutting Down Safely and explain what changed on the screen.
8. Demonstrate one safe action from M02-L08 Personalizing Windows and Accessibility and explain what changed on the

M02 Flashcards: Windows 11 Basics

Cut these into cards or import them into an LMS flashcard tool.

Card 1

Front: M02-L01 Starting the Computer and Signing In

Back: The computer is like a house. The power button opens the house, the sign-in screen is the front door, and the PIN is your key.

Card 2

Front: Power Button

Back: A core concept from Starting the Computer and Signing In.

Card 3

Front: M02-L02 The Desktop, Taskbar, and Start Menu

Back: The desktop is your desk, the taskbar is your tool shelf, and the Start menu is the drawer where apps live.

Card 4

Front: Desktop Icons

Back: A core concept from The Desktop, Taskbar, and Start Menu.

Card 5

Front: M02-L03 Opening, Closing, and Switching Apps

Back: Apps are like open notebooks on a table. You can open one, put one aside, or close it when finished.

Card 6

Front: Open Apps

Back: A core concept from Opening, Closing, and Switching Apps.

Card 7

Front: M02-L04 Using Windows Search and Settings

Back: Windows Search is like asking a helpful receptionist where something is.

Card 8

Front: Search Box

Back: A core concept from Using Windows Search and Settings.

Card 9

M02 Cheat Sheet: Windows 11 Basics

Main Safety Habit

Do one action → pause → check what changed → continue only if it makes sense.

Lesson Memory Lines

- M02-L01 Starting the Computer and Signing In: Remember - The computer is like a house. The power button opens the house, the sign-in screen is the front door, and the PIN is your key. - M02-L02 The Desktop, Taskbar, and Start Menu: Remember - The desktop is your desk, the taskbar is your tool shelf, and the Start menu is the drawer where apps live. - M02-L03 Opening, Closing, and Switching Apps: Remember - Apps are like open notebooks on a table. You can open one, put one aside, or close it when finished. - M02-L04 Using Windows Search and Settings: Remember - Windows Search is like asking a helpful receptionist where something is. - M02-L05 Wi-Fi, Sound, Display, and Battery Basics: Remember - Quick Settings is like a small control panel for daily comfort: internet, sound, screen, and power. - M02-L06 Notifications, Quick Settings, and Focus: Remember - Notifications are like small notes. Some are useful, but too many can make learning harder. - M02-L07 Restarting, Updating, and Shutting Down Safely: Remember - Updates are like medicine for the

M03 Mouse & Keyboard Skills

M03-L01 Holding and Moving the Mouse

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain mouse grip, pointer, moving slowly, resting the hand, touchpad basics in simple words.
2. Follow steps to move the pointer calmly and accurately.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: The mouse pointer is like your finger on the screen. Move slowly first; speed comes later.

This lesson focuses on mouse grip, pointer, moving slowly, resting the hand, touchpad basics. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Holding and Moving the Mouse
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to move the pointer calmly and accurately."
3. Find the part of the screen, mouse, keyboard, file, or browser related to mouse grip.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while typing a Japanese address.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while searching for a clinic name.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for searching for a clinic name.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> The mouse pointer is like your finger on the screen. Move slowly first; speed comes later.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about mouse grip, pointer, moving slowly, resting the hand, touchpad basics.
2. The learner should be able to move the pointer calmly and accurately.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is typing a Japanese address.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Mouse Grip
- Back: A key idea in Holding and Moving the Mouse.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: The mouse pointer is like your finger on the screen. Move slowly first; speed comes later.

Summary

In this lesson, the learner practiced Holding and Moving the Mouse in M03 Mouse & Keyboard Skills. The key idea was mouse grip, pointer, moving slowly, resting the hand, touchpad basics. The learner used a realistic example, such as typing a Japanese address, and practiced

M03-L02 Click, Double-Click, Right-Click, and Scroll

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain left click, double-click, right click menu, mouse wheel, touchpad tap in simple words.
2. Follow steps to choose items and open menus with confidence.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Left-click says “choose this.” Right-click says “show me more options.”

This lesson focuses on left click, double-click, right click menu, mouse wheel, touchpad tap. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Click, Double-Click, Right-Click, and Scroll
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to choose items and open menus with confidence."
3. Find the part of the screen, mouse, keyboard, file, or browser related to left click.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while searching for a clinic name.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while copying a LINE message into a document.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for copying a LINE message into a document.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Left-click says "choose this." Right-click says "show me more options."

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about left click, double-click, right click menu, mouse wheel, touchpad tap.
2. The learner should be able to choose items and open menus with confidence.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is searching for a clinic name.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Click, Double-Click, Right-Click, and Scroll in M03 Mouse & Keyboard Skills. The key idea was left click, double-click, right click menu, mouse wheel, touchpad tap. The learner used a realistic example, such as searching for a clinic name, and

M03-L03 Dragging, Dropping, and Selecting Items

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain drag, drop, select icons, select text, resize windows in simple words.
2. Follow steps to move objects and select items safely.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Dragging is like picking up a paper and putting it in a different folder.

This lesson focuses on drag, drop, select icons, select text, resize windows. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

Check what changed

↓

Continue or ask for help

Memory picture:

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to move objects and select items safely."
3. Find the part of the screen, mouse, keyboard, file, or browser related to drag.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while copying a LINE message into a document.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while filling a travel form.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for filling a travel form.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Dragging is like picking up a paper and putting it in a different folder.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about drag, drop, select icons, select text, resize windows.
2. The learner should be able to move objects and select items safely.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is copying a LINE message into a document.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Dragging, Dropping, and Selecting Items in M03 Mouse & Keyboard Skills. The key idea was drag, drop, select icons, select text, resize windows. The learner used a realistic example, such as copying a LINE message into a document, and

M03-L04 Keyboard Basics: Letters, Numbers, and Editing Keys

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain letter keys, number keys, space, enter, backspace, delete, arrow keys in simple words.
2. Follow steps to type simple words and correct mistakes.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: The keyboard is a writing machine. Backspace erases behind you; Delete erases in front of you.

This lesson focuses on letter keys, number keys, space, enter, backspace, delete, arrow keys. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Continue or ask for help

Memory picture:

Keyboard Basics: Letters, Numbers, and Editing Keys

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to type simple words and correct mistakes."
3. Find the part of the screen, mouse, keyboard, file, or browser related to letter keys.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while filling a travel form.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while switching English and Japanese input.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for switching English and Japanese input.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> The keyboard is a writing machine. Backspace erases behind you; Delete erases in front of you.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about letter keys, number keys, space, enter, backspace, delete, arrow keys.
2. The learner should be able to type simple words and correct mistakes.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is filling a travel form.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Letter Keys
- Back: A key idea in Keyboard Basics: Letters, Numbers, and Editing Keys.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: The keyboard is a writing machine. Backspace erases behind you; Delete erases in front of you.

Summary

In this lesson, the learner practiced Keyboard Basics: Letters, Numbers, and Editing Keys in M03 Mouse & Keyboard Skills. The key idea was letter keys, number keys, space, enter, backspace, delete, arrow keys. The learner used a realistic example, such as filling a travel form,

M03-L05 Useful Shortcuts: Copy, Cut, Paste, Undo, and Save

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain Ctrl+C, Ctrl+X, Ctrl+V, Ctrl+Z, Ctrl+S, shortcut safety in simple words.
2. Follow steps to use the most useful shortcuts for office work.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Shortcuts are like small magic buttons, but they are safe when practiced slowly.

This lesson focuses on Ctrl+C, Ctrl+X, Ctrl+V, Ctrl+Z, Ctrl+S, shortcut safety. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Useful Shortcuts: Copy, Cut, Paste, Undo, and Save
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to use the most useful shortcuts for office work."
3. Find the part of the screen, mouse, keyboard, file, or browser related to Ctrl+C.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while switching English and Japanese input.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while typing a Japanese address.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for typing a Japanese address.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Shortcuts are like small magic buttons, but they are safe when practiced slowly.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about Ctrl+C, Ctrl+X, Ctrl+V, Ctrl+Z, Ctrl+S, shortcut safety.
2. The learner should be able to use the most useful shortcuts for office work.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is switching English and Japanese input.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Ctrl+C
- Back: A key idea in Useful Shortcuts: Copy, Cut, Paste, Undo, and Save.

Card 2

- Front: Pause and Check

- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Shortcuts are like small magic buttons, but they are safe when practiced slowly.

Summary

In this lesson, the learner practiced Useful Shortcuts: Copy, Cut, Paste, Undo, and Save in M03 Mouse & Keyboard Skills. The key idea was Ctrl+C, Ctrl+X, Ctrl+V, Ctrl+Z, Ctrl+S, shortcut safety. The learner used a realistic example, such as switching English and Japanese input, and

M03-L06 Selecting and Editing Text in Forms

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain cursor, highlight, replace text, tab key, form fields, checkboxes in simple words.
2. Follow steps to complete online forms and documents with fewer mistakes.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: The cursor is the blinking place where your next letter will appear.

This lesson focuses on cursor, highlight, replace text, tab key, form fields, checkboxes. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Selecting and Editing Text in Forms
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to complete online forms and documents with fewer mistakes."
3. Find the part of the screen, mouse, keyboard, file, or browser related to cursor.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while typing a Japanese address.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while searching for a clinic name.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for searching for a clinic name.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> The cursor is the blinking place where your next letter will appear.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about cursor, highlight, replace text, tab key, form fields, checkboxes.
2. The learner should be able to complete online forms and documents with fewer mistakes.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is typing a Japanese address.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Cursor
- Back: A key idea in Selecting and Editing Text in Forms.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: The cursor is the blinking place where your next letter will appear.

Summary

In this lesson, the learner practiced Selecting and Editing Text in Forms in M03 Mouse & Keyboard Skills. The key idea was cursor, highlight, replace text, tab key, form fields, checkboxes. The learner used a realistic example, such as typing a Japanese address, and practiced

M03-L07 English, Japanese Input, Symbols, and Password Typing

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain language switch, IME, uppercase, symbols, password dots, common mistakes in simple words.
2. Follow steps to type names, emails, Japanese words, and passwords carefully.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Language input is like choosing which pen you use: English pen or Japanese pen.

This lesson focuses on language switch, IME, uppercase, symbols, password dots, common mistakes. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

English, Japanese Input, Symbols, and Password Typing
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to type names, emails, Japanese words, and passwords carefully."
3. Find the part of the screen, mouse, keyboard, file, or browser related to language switch.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while searching for a clinic name.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while copying a LINE message into a document.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for copying a LINE message into a document.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Language input is like choosing which pen you use: English pen or Japanese pen.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about language switch, IME, uppercase, symbols, password dots, common mistakes.
2. The learner should be able to type names, emails, Japanese words, and passwords carefully.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is searching for a clinic name.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Language Switch
- Back: A key idea in English, Japanese Input, Symbols, and Password Typing.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Language input is like choosing which pen you use: English pen or Japanese pen.

Summary

In this lesson, the learner practiced English, Japanese Input, Symbols, and Password Typing in M03 Mouse & Keyboard Skills. The key idea was language switch, IME, uppercase, symbols, password dots, common mistakes. The learner used a realistic example, such as searching for a clinic name,

M03-L08 Combined Practice: Mouse and Keyboard Together

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain open app, type, select, copy, paste, save, close in simple words.
2. Follow steps to combine mouse and keyboard skills in a realistic task.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Mouse and keyboard skills are hand skills. They improve through repetition. Accuracy matters more than speed, especially for older learners who may need more time to control the pointer or find keys.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Real computer work uses both hands: mouse to go somewhere, keyboard to write something.

This lesson focuses on open app, type, select, copy, paste, save, close. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Combined Practice: Mouse and Keyboard Together
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to combine mouse and keyboard skills in a realistic task."
3. Find the part of the screen, mouse, keyboard, file, or browser related to open app.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while copying a LINE message into a document.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while filling a travel form.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for filling a travel form.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Real computer work uses both hands: mouse to go somewhere, keyboard to write something.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about open app, type, select, copy, paste, save, close.
2. The learner should be able to combine mouse and keyboard skills in a realistic task.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is copying a LINE message into a document.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Open App
- Back: A key idea in Combined Practice: Mouse and Keyboard Together.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Real computer work uses both hands: mouse to go somewhere, keyboard to write something.

Summary

In this lesson, the learner practiced Combined Practice: Mouse and Keyboard Together in M03 Mouse & Keyboard Skills. The key idea was open app, type, select, copy, paste, save, close. The learner used a realistic example, such as copying a LINE message into a document,

M03 Module Review: Mouse & Keyboard Skills

Big Review Idea

In this module, the learner practiced the foundation skills for Mouse & Keyboard Skills. The goal was to build comfortable hand skills for pointing, clicking, typing, editing text, and using simple keyboard shortcuts.

The learner does not need to remember every detail perfectly. The learner should remember the repeated safety habit:

> Do one action. Pause. Check what changed. Continue only when it makes sense.

Lessons Reviewed

- M03-L01 Holding and Moving the Mouse: mouse grip, pointer, moving slowly, resting the hand, touchpad basics.
- M03-L02 Click, Double-Click, Right-Click, and Scroll: left click, double-click, right click menu, mouse wheel, touchpad tap.
- M03-L03 Dragging, Dropping, and Selecting Items: drag, drop, select icons, select text, resize windows.
- M03-L04 Keyboard Basics: Letters, Numbers, and Editing Keys: letter keys, number keys, space, enter, backspace, delete, arrow keys.
- M03-L05 Useful Shortcuts: Copy, Cut, Paste, Undo, and Save: Ctrl+C, Ctrl+X, Ctrl+V, Ctrl+Z, Ctrl+S, shortcut safety.
- M03-L06 Selecting and Editing Text in Forms: cursor, highlight, replace text, tab key, form fields, checkboxes.
- M03-L07 English, Japanese Input, Symbols, and Password Typing: language switch, IME, uppercase, symbols, password dots, common mistakes.
- M03-L08 Combined Practice: Mouse and Keyboard Together: open app, type, select, copy, paste, save, close.

Key Vocabulary Review

- Action: Something the learner does, such as click, type, save, search, open, close, copy, or choose. - Screen feedback: The change the learner sees after an action.

M03 Module Quiz: Mouse & Keyboard Skills

1. Which lesson teaches about mouse grip?
2. Which lesson teaches about left click?
3. Which lesson teaches about drag?
4. Which lesson teaches about letter keys?
5. Which lesson teaches about Ctrl+C?
6. Which lesson teaches about cursor?
7. Which lesson teaches about language switch?
8. Which lesson teaches about open app?
9. What should a learner do after each click or key press?
10. What should a learner do if a message mentions money, deletion, passwords, or installation?
11. Why is practice with harmless examples useful?
12. What is more important for senior beginners: speed or accuracy?
13. Why should lesson notes use simple words?
14. What is one sign the learner should ask for help?
15. How can the learner remember the module?
16. What is right-click commonly used for?
17. What does the scroll wheel help you do?
18. What shortcut usually copies selected text?
19. Why is password typing practice important?
20. What should you do if Japanese and English input changes unexpectedly?

M03 Practical Assessment: Mouse & Keyboard Skills

Assessment Purpose

This practical assessment checks whether the learner can use the module skills in real life, not only remember quiz answers. The teacher should allow extra time and should not interrupt too quickly. The learner may use the cheat sheet.

Setup

- Use a Windows 11 computer.
- Use practice files, practice websites, or harmless settings.
- Do not use real bank accounts, payments, private medical records, or important official forms during assessment.
- Keep the environment calm and quiet.

Assessment Tasks

1. Demonstrate one safe action from M03-L01 Holding and Moving the Mouse and explain what changed on the screen.
2. Demonstrate one safe action from M03-L02 Click, Double-Click, Right-Click, and Scroll and explain what changed on the screen.
3. Demonstrate one safe action from M03-L03 Dragging, Dropping, and Selecting Items and explain what changed on the screen.
4. Demonstrate one safe action from M03-L04 Keyboard Basics: Letters, Numbers, and Editing Keys and explain what changed on the screen.
5. Demonstrate one safe action from M03-L05 Useful Shortcuts: Copy, Cut, Paste, Undo, and Save and explain what changed on the screen.
6. Demonstrate one safe action from M03-L06 Selecting and Editing Text in Forms and explain what changed on the screen.
7. Demonstrate one safe action from M03-L07 English, Japanese Input, Symbols, and Password Typing and explain what changed on the screen.
8. Demonstrate one safe action from M03-L08 Combined Practice: Mouse and Keyboard Together

M03 Flashcards: Mouse & Keyboard Skills

Cut these into cards or import them into an LMS flashcard tool.

Card 1

Front: M03-L01 Holding and Moving the Mouse

Back: The mouse pointer is like your finger on the screen. Move slowly first; speed comes later.

Card 2

Front: Mouse Grip

Back: A core concept from Holding and Moving the Mouse.

Card 3

Front: M03-L02 Click, Double-Click, Right-Click, and Scroll

Back: Left-click says “choose this.” Right-click says “show me more options.”

Card 4

Front: Left Click

Back: A core concept from Click, Double-Click, Right-Click, and Scroll.

Card 5

Front: M03-L03 Dragging, Dropping, and Selecting Items

Back: Dragging is like picking up a paper and putting it in a different folder.

Card 6

Front: Drag

Back: A core concept from Dragging, Dropping, and Selecting Items.

Card 7

Front: M03-L04 Keyboard Basics: Letters, Numbers, and Editing Keys

Back: The keyboard is a writing machine. Backspace erases behind you; Delete erases in front of you.

Card 8

Front: Letter Keys

Back: A core concept from Keyboard Basics: Letters, Numbers, and Editing Keys.

Card 9

Front: M03-L05 Useful Shortcuts: Copy, Cut, Paste, Undo, and Save

Back: Shortcuts are like small magic buttons, but they are safe when practiced

M03 Cheat Sheet: Mouse & Keyboard Skills

Main Safety Habit

Do one action → pause → check what changed → continue only if it makes sense.

Lesson Memory Lines

- M03-L01 Holding and Moving the Mouse: Remember - The mouse pointer is like your finger on the screen. Move slowly first; speed comes later. - M03-L02 Click, Double-Click, Right-Click, and Scroll: Remember - Left-click says “choose this.” Right-click says “show me more options.” - M03-L03 Dragging, Dropping, and Selecting Items: Remember - Dragging is like picking up a paper and putting it in a different folder. - M03-L04 Keyboard Basics: Letters, Numbers, and Editing Keys: Remember - The keyboard is a writing machine. Backspace erases behind you; Delete erases in front of you. - M03-L05 Useful Shortcuts: Copy, Cut, Paste, Undo, and Save: Remember - Shortcuts are like small magic buttons, but they are safe when practiced slowly. - M03-L06 Selecting and Editing Text in Forms: Remember - The cursor is the blinking place where your next letter will appear. - M03-L07 English, Japanese Input, Symbols, and Password Typing: Remember - Language input is like choosing which pen you use: English pen or Japanese pen. - M03-L08 Combined Practice: Mouse and Keyboard Together: Remember - Real computer work uses both

M04 Files & Folders

M04-L01 Understanding Files, Folders, and Locations

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain file, folder, location, Documents, Downloads, Pictures, Desktop in simple words.
2. Follow steps to understand where computer information lives.
3. Use the skill in an everyday example such as **saving a

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A file is one paper. A folder is a paper folder. A location is the cabinet or shelf.

This lesson focuses on file, folder, location, Documents, Downloads, Pictures, Desktop. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Understanding Files, Folders, and Locations
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to understand where computer information lives."
3. Find the part of the screen, mouse, keyboard, file, or browser related to file.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while saving a hospital appointment note.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while organizing family photos from Kyoto.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for organizing family photos from Kyoto.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A file is one paper. A folder is a paper folder. A location is the cabinet or shelf.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about file, folder, location, Documents, Downloads, Pictures, Desktop.
2. The learner should be able to understand where computer information lives.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is saving a hospital appointment note.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: File
- Back: A key idea in Understanding Files, Folders, and Locations.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: A file is one paper. A folder is a paper folder. A location is the cabinet or shelf.

Summary

In this lesson, the learner practiced Understanding Files, Folders, and Locations in M04 Files & Folders. The key idea was file, folder, location, Documents, Downloads, Pictures, Desktop. The learner used a realistic example, such as saving a hospital appointment note, and practiced safe recovery from

M04-L02 File Explorer Basics

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain File Explorer, navigation pane, address bar, view area, preview, icons in simple words.
2. Follow steps to open File Explorer and recognize its parts.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: File Explorer is the map of your computer storage.

This lesson focuses on File Explorer, navigation pane, address bar, view area, preview, icons. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Summary

In this lesson, the learner practiced File Explorer Basics in M04 Files & Folders. The key idea was File Explorer, navigation pane, address bar, view area, preview, icons. The learner used a realistic example, such as organizing family photos from Kyoto, and practiced safe recovery

M04-L03 Creating, Naming, and Renaming Folders

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain new folder, clear names, dates, rename, avoid confusing symbols in simple words.
2. Follow steps to make simple folders for daily life.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Good folder names are like labels on medicine bottles: clear, readable, and not too long.

This lesson focuses on new folder, clear names, dates, rename, avoid confusing symbols. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action

Continue or ask for help

Memory picture:

Creating, Naming, and Renaming Folders
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to make simple folders for daily life."
3. Find the part of the screen, mouse, keyboard, file, or browser related to new folder.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while renaming a scanned pension document.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while saving a PDF receipt from Rakuten.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for saving a PDF receipt from Rakuten.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Good folder names are like labels on medicine bottles: clear, readable, and not too long.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about new folder, clear names, dates, rename, avoid confusing symbols.
2. The learner should be able to make simple folders for daily life.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is renaming a scanned pension document.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

M04-L04 Saving Files from Apps

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain Save, Save As, file name, file type, choose folder, Microsoft Word example in simple words.
2. Follow steps to save work in the right place with a clear name.
3. Use

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Saving is like putting a finished paper into the correct folder before leaving the room.

This lesson focuses on Save, Save As, file name, file type, choose folder, Microsoft Word example. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to save work in the right place with a clear name."
3. Find the part of the screen, mouse, keyboard, file, or browser related to Save.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while saving a PDF receipt from Rakuten.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while copying photos to a USB drive.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for copying photos to a USB drive.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Saving is like putting a finished paper into the correct folder before leaving the room.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about Save, Save As, file name, file type, choose folder, Microsoft Word example.
2. The learner should be able to save work in the right place with a clear name.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is saving a PDF receipt from Rakuten.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Saving Files from Apps in M04 Files & Folders. The key idea was Save, Save As, file name, file type, choose folder, Microsoft Word example. The learner used a realistic example, such as saving a PDF receipt from Rakuten,

M04-L05 Copying, Moving, Deleting, and Restoring Files

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain copy, move, delete, recycle bin, restore, permanent delete warning in simple words.
2. Follow steps to manage files safely without losing them.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Copy makes a second paper. Move changes the paper's place. Delete puts it in the trash first.

This lesson focuses on copy, move, delete, recycle bin, restore, permanent delete warning. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Continue or ask for help

Memory picture:

Copying, Moving, Deleting, and Restoring Files
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to manage files safely without losing them."
3. Find the part of the screen, mouse, keyboard, file, or browser related to copy.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while copying photos to a USB drive.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while saving a hospital appointment note.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for saving a hospital appointment note.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Copy makes a second paper. Move changes the paper's place. Delete puts it in the trash first.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about copy, move, delete, recycle bin, restore, permanent delete warning.
2. The learner should be able to manage files safely without losing them.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is copying photos to a USB drive.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Copy
- Back: A key idea in Copying, Moving, Deleting, and Restoring Files.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Copy makes a second paper. Move changes the paper's place. Delete puts it in the trash first.

Summary

In this lesson, the learner practiced Copying, Moving, Deleting, and Restoring Files in M04 Files & Folders. The key idea was copy, move, delete, recycle bin, restore, permanent delete warning. The learner used a realistic example, such as copying photos to a USB drive, and

M04-L06 Searching, Sorting, and Changing File Views

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain search box, sort by date/name/type, details view, large icons in simple words.
2. Follow steps to find documents and photos faster.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Sorting files is like arranging papers by date, name, or type.

This lesson focuses on search box, sort by date/name/type, details view, large icons. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Searching, Sorting, and Changing File Views
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to find documents and photos faster."
3. Find the part of the screen, mouse, keyboard, file, or browser related to search box.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while saving a hospital appointment note.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while organizing family photos from Kyoto.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for organizing family photos from Kyoto.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Sorting files is like arranging papers by date, name, or type.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about search box, sort by date/name/type, details view, large icons.
2. The learner should be able to find documents and photos faster.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is saving a hospital appointment note.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Search Box
- Back: A key idea in Searching, Sorting, and Changing File Views.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Sorting files is like arranging papers by date, name, or type.

Summary

In this lesson, the learner practiced Searching, Sorting, and Changing File Views in M04 Files & Folders. The key idea was search box, sort by date/name/type, details view, large icons. The learner used a realistic example, such as saving a hospital appointment note, and practiced

M04-L07 Downloads, USB Drives, and External Storage

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain Downloads folder, USB drive, safely remove, external storage, duplicate copies in simple words.
2. Follow steps to handle downloaded files and removable storage carefully.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A USB drive is a small bag for files. It can carry copies, but it can also be lost.

This lesson focuses on Downloads folder, USB drive, safely remove, external storage, duplicate copies. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Downloads, USB Drives, and External Storage
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to handle downloaded files and removable storage carefully."
3. Find the part of the screen, mouse, keyboard, file, or browser related to Downloads folder.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while organizing family photos from Kyoto.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while renaming a scanned pension document.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for renaming a scanned pension document.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A USB drive is a small bag for files. It can carry copies, but it can also be lost.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about Downloads folder, USB drive, safely remove, external storage, duplicate copies.
2. The learner should be able to handle downloaded files and removable storage carefully.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is organizing family photos from Kyoto.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: A USB drive is a small bag for files. It can carry copies, but it can also be lost.

Summary

In this lesson, the learner practiced Downloads, USB Drives, and External Storage in M04 Files & Folders. The key idea was Downloads folder, USB drive, safely remove, external storage, duplicate copies. The learner used a realistic example, such as organizing family photos from Kyoto, and

M04-L08 Organizing Documents, Photos, and Receipts

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain folder system, backup copy, photo names, receipt folders, simple habits in simple words.
2. Follow steps to build an easy personal filing system.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

Files and folders help learners keep documents, photos, and downloads organized. Many beginners lose work because they do not know where it was saved. Clear names and simple folders solve many problems.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A simple filing habit today prevents a big search problem later.

This lesson focuses on folder system, backup copy, photo names, receipt folders, simple habits. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed
↓
Continue or ask for help

Memory picture:

Organizing Documents, Photos, and Receipts
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to build an easy personal filing system."
3. Find the part of the screen, mouse, keyboard, file, or browser related to folder system.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while renaming a scanned pension document.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while saving a PDF receipt from Rakuten.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for saving a PDF receipt from Rakuten.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A simple filing habit today prevents a big search problem later.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about folder system, backup copy, photo names, receipt folders, simple habits.
2. The learner should be able to build an easy personal filing system.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is renaming a scanned pension document.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Folder System
- Back: A key idea in Organizing Documents, Photos, and Receipts.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Summary

In this lesson, the learner practiced Organizing Documents, Photos, and Receipts in M04 Files & Folders. The key idea was folder system, backup copy, photo names, receipt folders, simple habits. The learner used a realistic example, such as renaming a scanned pension document, and practiced

M04 Module Review: Files & Folders

Big Review Idea

In this module, the learner practiced the foundation skills for Files & Folders. The goal was to teach learners what files and folders are, how to save, find, move, copy, delete, restore, and organize everyday documents and photos.

The learner does not need to remember every detail perfectly. The learner should remember the repeated safety habit:

> Do one action. Pause. Check what changed. Continue only when it makes sense.

Lessons Reviewed

- M04-L01 Understanding Files, Folders, and Locations: file, folder, location, Documents, Downloads, Pictures, Desktop.
- M04-L02 File Explorer Basics: File Explorer, navigation pane, address bar, view area, preview, icons.
- M04-L03 Creating, Naming, and Renaming Folders: new folder, clear names, dates, rename, avoid confusing symbols.
- M04-L04 Saving Files from Apps: Save, Save As, file name, file type, choose folder, Microsoft Word example.
- M04-L05 Copying, Moving, Deleting, and Restoring Files: copy, move, delete, recycle bin, restore, permanent delete warning.
- M04-L06 Searching, Sorting, and Changing File Views: search box, sort by date/name/type, details view, large icons.
- M04-L07 Downloads, USB Drives, and External Storage: Downloads folder, USB drive, safely remove, external storage, duplicate copies.
- M04-L08 Organizing Documents, Photos, and Receipts: folder system, backup copy, photo names, receipt folders, simple habits.

Key Vocabulary Review

- Action: Something the learner does, such as click, type, save, search, open, close, copy, or choose. - Screen feedback: The change the learner sees after an

M04 Module Quiz: Files & Folders

1. Which lesson teaches about file?
2. Which lesson teaches about File Explorer?
3. Which lesson teaches about new folder?
4. Which lesson teaches about Save?
5. Which lesson teaches about copy?
6. Which lesson teaches about search box?
7. Which lesson teaches about Downloads folder?
8. Which lesson teaches about folder system?
9. What should a learner do after each click or key press?
10. What should a learner do if a message mentions money, deletion, passwords, or installation?
11. Why is practice with harmless examples useful?
12. What is more important for senior beginners: speed or accuracy?
13. Why should lesson notes use simple words?
14. What is one sign the learner should ask for help?
15. How can the learner remember the module?
16. What is a folder used for?
17. Why should file names be clear?
18. What is the Downloads folder commonly used for?
19. Why should you check before deleting a file?
20. What is one safe backup habit?

M04 Practical Assessment: Files & Folders

Assessment Purpose

This practical assessment checks whether the learner can use the module skills in real life, not only remember quiz answers. The teacher should allow extra time and should not interrupt too quickly. The learner may use the cheat sheet.

Setup

- Use a Windows 11 computer.
- Use practice files, practice websites, or harmless settings.
- Do not use real bank accounts, payments, private medical records, or important official forms during assessment.
- Keep the environment calm and quiet.

Assessment Tasks

1. Demonstrate one safe action from M04-L01 Understanding Files, Folders, and Locations and explain what changed on the screen.
2. Demonstrate one safe action from M04-L02 File Explorer Basics and explain what changed on the screen.
3. Demonstrate one safe action from M04-L03 Creating, Naming, and Renaming Folders and explain what changed on the screen.
4. Demonstrate one safe action from M04-L04 Saving Files from Apps and explain what changed on the screen.
5. Demonstrate one safe action from M04-L05 Copying, Moving, Deleting, and Restoring Files and explain what changed on the screen.
6. Demonstrate one safe action from M04-L06 Searching, Sorting, and Changing File Views and explain what changed on the screen.
7. Demonstrate one safe action from M04-L07 Downloads, USB Drives, and External Storage and explain what changed on the screen.
8. Demonstrate one safe action from M04-L08 Organizing Documents, Photos, and Receipts and explain what changed on the screen.

M04 Flashcards: Files & Folders

Cut these into cards or import them into an LMS flashcard tool.

Card 1

Front: M04-L01 Understanding Files, Folders, and Locations

Back: A file is one paper. A folder is a paper folder. A location is the cabinet or shelf.

Card 2

Front: File

Back: A core concept from Understanding Files, Folders, and Locations.

Card 3

Front: M04-L02 File Explorer Basics

Back: File Explorer is the map of your computer storage.

Card 4

Front: File Explorer

Back: A core concept from File Explorer Basics.

Card 5

Front: M04-L03 Creating, Naming, and Renaming Folders

Back: Good folder names are like labels on medicine bottles: clear, readable, and not too long.

Card 6

Front: New Folder

Back: A core concept from Creating, Naming, and Renaming Folders.

Card 7

Front: M04-L04 Saving Files from Apps

Back: Saving is like putting a finished paper into the correct folder before leaving the room.

Card 8

Front: Save

Back: A core concept from Saving Files from Apps.

Card 9

Front: M04-L05 Copying, Moving, Deleting, and Restoring Files

Back: Copy makes a second paper. Move changes the paper's place. Delete puts it in the trash first.

Card 10

Front: Copy

M04 Cheat Sheet: Files & Folders

Main Safety Habit

Do one action → pause → check what changed → continue only if it makes sense.

Lesson Memory Lines

- M04-L01 Understanding Files, Folders, and Locations: Remember - A file is one paper. A folder is a paper folder. A location is the cabinet or shelf. - M04-L02 File Explorer Basics: Remember - File Explorer is the map of your computer storage. - M04-L03 Creating, Naming, and Renaming Folders: Remember - Good folder names are like labels on medicine bottles: clear, readable, and not too long. - M04-L04 Saving Files from Apps: Remember - Saving is like putting a finished paper into the correct folder before leaving the room. - M04-L05 Copying, Moving, Deleting, and Restoring Files: Remember - Copy makes a second paper. Move changes the paper's place. Delete puts it in the trash first. - M04-L06 Searching, Sorting, and Changing File Views: Remember - Sorting files is like arranging papers by date, name, or type. - M04-L07 Downloads, USB Drives, and External Storage: Remember - A USB drive is a small bag for files. It can carry copies, but it can also be lost. - M04-L08 Organizing Documents, Photos, and Receipts: Remember - A simple filing habit today

M05 Internet Fundamentals

M05-L01 What the Internet Is

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain internet, website, server, cloud, online and offline in simple words.
2. Follow steps to understand the internet in simple daily-life language.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as searching NHK weather or checking a train route.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: The internet is like a huge road system connecting your computer to many information buildings.

This lesson focuses on internet, website, server, cloud, online and offline. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

What the Internet Is

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to understand the internet in simple daily-life language."
3. Find the part of the screen, mouse, keyboard, file, or browser related to internet.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while searching NHK weather.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while checking a train route.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for checking a train route.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> The internet is like a huge road system connecting your computer to many information buildings.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about internet, website, server, cloud, online and offline.
2. The learner should be able to understand the internet in simple daily-life language.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is searching NHK weather.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Internet
- Back: A key idea in What the Internet Is.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: The internet is like a huge road system connecting your computer to many information buildings.

Summary

In this lesson, the learner practiced What the Internet Is in M05 Internet Fundamentals. The key idea was internet, website, server, cloud, online and offline. The learner used a realistic example, such as searching NHK weather, and practiced safe recovery from small mistakes.

M05-L02 Connecting to the Internet with Wi-Fi

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain Wi-Fi, router, network name, password, signal, public Wi-Fi caution in simple words.
2. Follow steps to connect to a safe network and recognize connection problems.
3. Use the skill in an

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as checking a train route or **opening a city

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Wi-Fi is invisible radio that connects your laptop to your home router.

This lesson focuses on Wi-Fi, router, network name, password, signal, public Wi-Fi caution. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Connecting to the Internet with Wi-Fi

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to connect to a safe network and recognize connection problems."
3. Find the part of the screen, mouse, keyboard, file, or browser related to Wi-Fi.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while checking a train route.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while opening a city office website.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for opening a city office website.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Wi-Fi is invisible radio that connects your laptop to your home router.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about Wi-Fi, router, network name, password, signal, public Wi-Fi caution.
2. The learner should be able to connect to a safe network and recognize connection problems.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is checking a train route.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Connecting to the Internet with Wi-Fi in M05 Internet Fundamentals. The key idea was Wi-Fi, router, network name, password, signal, public Wi-Fi caution. The learner used a realistic example, such as checking a train route, and practiced safe recovery

M05-L03 Websites, Addresses, and Links

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain website, URL, domain, link, back button, secure lock in simple words.
2. Follow steps to move around websites without getting lost.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as opening a city office website or **reading a

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A web address is like a street address. A link is like a door to another room.

This lesson focuses on website, URL, domain, link, back button, secure lock. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Continue or ask for help

Memory picture:

Websites, Addresses, and Links
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to move around websites without getting lost."
3. Find the part of the screen, mouse, keyboard, file, or browser related to website.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while opening a city office website.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while reading a clinic website.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for reading a clinic website.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A web address is like a street address. A link is like a door to another room.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about website, URL, domain, link, back button, secure lock.
2. The learner should be able to move around websites without getting lost.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is opening a city office website.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

M05-L04 Search Engines and Better Searching

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain search engine, keywords, search results, ads, simple search strategies in simple words.
2. Follow steps to search for useful information with better words.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as reading a clinic website or **using Yahoo! JAPAN

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A search engine is like a librarian. The better your question, the better the answer.

This lesson focuses on search engine, keywords, search results, ads, simple search strategies. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Search Engines and Better Searching

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to search for useful information with better words."
3. Find the part of the screen, mouse, keyboard, file, or browser related to search engine.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while reading a clinic website.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while using Yahoo! JAPAN search.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for using Yahoo! JAPAN search.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A search engine is like a librarian. The better your question, the better the answer.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about search engine, keywords, search results, ads, simple search strategies.
2. The learner should be able to search for useful information with better words.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is reading a clinic website.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

In this lesson, the learner practiced Search Engines and Better Searching in M05 Internet Fundamentals. The key idea was search engine, keywords, search results, ads, simple search strategies. The learner used a realistic example, such as reading a clinic website, and practiced safe recovery from

M05-L05 Checking Whether Online Information Is Trustworthy

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain source, date, author, official site, ads, rumors, health caution in simple words.
2. Follow steps to judge basic trust before believing or sharing.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as using Yahoo! JAPAN search or searching NHK weather.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Online information is like advice from strangers. Check who is speaking before trusting it.

This lesson focuses on source, date, author, official site, ads, rumors, health caution. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓
Continue or ask for help
Memory picture:

Checking Whether Online Information Is Trustworthy
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to judge basic trust before believing or sharing."
3. Find the part of the screen, mouse, keyboard, file, or browser related to source.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while using Yahoo! JAPAN search.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while searching NHK weather.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for searching NHK weather.
2. Explain each step aloud.

3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Online information is like advice from strangers. Check who is speaking before trusting it.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about source, date, author, official site, ads, rumors, health caution.
2. The learner should be able to judge basic trust before believing or sharing.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is using Yahoo! JAPAN search.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

M05-L06 Online Forms, Accounts, and Basic Password Habits

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain form fields, account, username, email, password, submit button in simple words.
2. Follow steps to understand common online forms and account basics.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as searching NHK weather or checking a train route.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: An online form is like a paper form, but mistakes can be sent quickly, so check slowly.

This lesson focuses on form fields, account, username, email, password, submit button. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Online Forms, Accounts, and Basic Password Habits
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to understand common online forms and account basics."
3. Find the part of the screen, mouse, keyboard, file, or browser related to form fields.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while searching NHK weather.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while checking a train route.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for checking a train route.
2. Explain each step aloud.

3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> An online form is like a paper form, but mistakes can be sent quickly, so check slowly.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about form fields, account, username, email, password, submit button.
2. The learner should be able to understand common online forms and account basics.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is searching NHK weather.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Form Fields
- Back: A key idea in Online Forms, Accounts, and Basic Password Habits.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: An online form is like a paper form, but mistakes can be sent quickly, so check slowly.

Summary

In this lesson, the learner practiced Online Forms, Accounts, and Basic Password Habits in M05 Internet Fundamentals. The key idea was form fields, account, username, email, password, submit button. The learner used a realistic example, such as searching NHK weather, and practiced safe recovery from

M05-L07 Downloads, Uploads, and Attachments

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain download, upload, attachment, PDF, image, file size, safe download habit in simple words.
2. Follow steps to send and receive files through websites safely.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as checking a train route or **opening a city

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Download means bring a file to your computer. Upload means send a file from your computer.

This lesson focuses on download, upload, attachment, PDF, image, file size, safe download habit. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item
↓
Do one small action
↓
Pause
↓
Check what changed

Continue or ask for help

Memory picture:

Downloads, Uploads, and Attachments

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to send and receive files through websites safely."
3. Find the part of the screen, mouse, keyboard, file, or browser related to download.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while checking a train route.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while opening a city office website.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for opening a city office website.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Download means bring a file to your computer. Upload means send a file from your computer.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about download, upload, attachment, PDF, image, file size, safe download habit.
2. The learner should be able to send and receive files through websites safely.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is checking a train route.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Downloads, Uploads, and Attachments in M05 Internet Fundamentals. The key idea was download, upload, attachment, PDF, image, file size, safe download habit. The learner used a realistic example, such as checking a train route, and practiced safe recovery from

M05-L08 Common Internet Problems and Safe Daily Habits

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain slow internet, no connection, wrong page, scam warning, safe routine in simple words.
2. Follow steps to solve small internet problems and practice safe habits.
3. Use the skill in an

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

The internet helps with news, maps, forms, learning, and communication. It also contains wrong information and scams. This module teaches use and caution together.

This skill can support daily life in Japan, such as opening a city office website or **reading a

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Good internet habits are like looking both ways before crossing a road.

This lesson focuses on slow internet, no connection, wrong page, scam warning, safe routine. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Common Internet Problems and Safe Daily Habits

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to solve small internet problems and practice safe habits."
3. Find the part of the screen, mouse, keyboard, file, or browser related to slow internet.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while opening a city office website.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while reading a clinic website.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for reading a clinic website.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Good internet habits are like looking both ways before crossing a road.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about slow internet, no connection, wrong page, scam warning, safe routine.
2. The learner should be able to solve small internet problems and practice safe habits.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is opening a city office website.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced Common Internet Problems and Safe Daily Habits in M05 Internet Fundamentals. The key idea was slow internet, no connection, wrong page, scam warning, safe routine. The learner used a realistic example, such as opening a city office website, and

M05 Module Review: Internet Fundamentals

Big Review Idea

In this module, the learner practiced the foundation skills for Internet Fundamentals. The goal was to explain what the internet is, how people connect, how websites and search work, and how to use online information safely.

The learner does not need to remember every detail perfectly. The learner should remember the repeated safety habit:

> Do one action. Pause. Check what changed. Continue only when it makes sense.

Lessons Reviewed

- M05-L01 What the Internet Is: internet, website, server, cloud, online and offline.
- M05-L02 Connecting to the Internet with Wi-Fi: Wi-Fi, router, network name, password, signal, public Wi-Fi caution.
- M05-L03 Websites, Addresses, and Links: website, URL, domain, link, back button, secure lock.
- M05-L04 Search Engines and Better Searching: search engine, keywords, search results, ads, simple search strategies.
- M05-L05 Checking Whether Online Information Is Trustworthy: source, date, author, official site, ads, rumors, health caution.
- M05-L06 Online Forms, Accounts, and Basic Password Habits: form fields, account, username, email, password, submit button.
- M05-L07 Downloads, Uploads, and Attachments: download, upload, attachment, PDF, image, file size, safe download habit.
- M05-L08 Common Internet Problems and Safe Daily Habits: slow internet, no connection, wrong page, scam warning, safe routine.

Key Vocabulary Review

- Action: Something the learner does, such as click, type, save, search, open, close, copy, or choose. - Screen feedback: The change the learner sees after an action. - Safe habit: A

M05 Module Quiz: Internet Fundamentals

1. Which lesson teaches about internet?
2. Which lesson teaches about Wi-Fi?
3. Which lesson teaches about website?
4. Which lesson teaches about search engine?
5. Which lesson teaches about source?
6. Which lesson teaches about form fields?
7. Which lesson teaches about download?
8. Which lesson teaches about slow internet?
9. What should a learner do after each click or key press?
10. What should a learner do if a message mentions money, deletion, passwords, or installation?
11. Why is practice with harmless examples useful?
12. What is more important for senior beginners: speed or accuracy?
13. Why should lesson notes use simple words?
14. What is one sign the learner should ask for help?
15. How can the learner remember the module?
16. What is a website address used for?
17. Why should official government or bank websites be checked carefully?
18. What does HTTPS usually show?
19. Why can public Wi-Fi be risky?
20. What should you do before entering personal information online?

M05 Practical Assessment: Internet Fundamentals

Assessment Purpose

This practical assessment checks whether the learner can use the module skills in real life, not only remember quiz answers. The teacher should allow extra time and should not interrupt too quickly. The learner may use the cheat sheet.

Setup

- Use a Windows 11 computer.
- Use practice files, practice websites, or harmless settings.
- Do not use real bank accounts, payments, private medical records, or important official forms during assessment.
- Keep the environment calm and quiet.

Assessment Tasks

1. Demonstrate one safe action from M05-L01 What the Internet Is and explain what changed on the screen.
2. Demonstrate one safe action from M05-L02 Connecting to the Internet with Wi-Fi and explain what changed on the screen.
3. Demonstrate one safe action from M05-L03 Websites, Addresses, and Links and explain what changed on the screen.
4. Demonstrate one safe action from M05-L04 Search Engines and Better Searching and explain what changed on the screen.
5. Demonstrate one safe action from M05-L05 Checking Whether Online Information Is Trustworthy and explain what changed on the screen.
6. Demonstrate one safe action from M05-L06 Online Forms, Accounts, and Basic Password Habits and explain what changed on the screen.
7. Demonstrate one safe action from M05-L07 Downloads, Uploads, and Attachments and explain what changed on the screen.
8. Demonstrate one safe action from M05-L08 Common Internet Problems and Safe Daily Habits and explain what changed on the

M05 Flashcards: Internet Fundamentals

Cut these into cards or import them into an LMS flashcard tool.

M05 Cheat Sheet: Internet Fundamentals

Main Safety Habit

Do one action → pause → check what changed → continue only if it makes sense.

Lesson Memory Lines

- M05-L01 What the Internet Is: Remember - The internet is like a huge road system connecting your computer to many information buildings. - M05-L02 Connecting to the Internet with Wi-Fi: Remember - Wi-Fi is invisible radio that connects your laptop to your home router. - M05-L03 Websites, Addresses, and Links: Remember - A web address is like a street address. A link is like a door to another room. - M05-L04 Search Engines and Better Searching: Remember - A search engine is like a librarian. The better your question, the better the answer. - M05-L05 Checking Whether Online Information Is Trustworthy: Remember - Online information is like advice from strangers. Check who is speaking before trusting it. - M05-L06 Online Forms, Accounts, and Basic Password Habits: Remember - An online form is like a paper form, but mistakes can be sent quickly, so check slowly. - M05-L07 Downloads, Uploads, and Attachments: Remember - Download means bring a file to your computer. Upload means send a file from your computer. - M05-L08 Common Internet Problems and Safe Daily Habits: Remember -

M06 Web Browsers

M06-L01 What a Web Browser Does

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain browser, Edge, Chrome, Safari, address bar, web page in simple words.
2. Follow steps to open a browser and understand its job.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as using Microsoft Edge for Microsoft 365 or **opening Chrome for

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A browser is a window for looking at websites.

This lesson focuses on browser, Edge, Chrome, Safari, address bar, web page. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to open a browser and understand its job."
3. Find the part of the screen, mouse, keyboard, file, or browser related to browser.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while using Microsoft Edge for Microsoft 365.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while opening Chrome for Google Drive.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for opening Chrome for Google Drive.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A browser is a window for looking at websites.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about browser, Edge, Chrome, Safari, address bar, web page.
2. The learner should be able to open a browser and understand its job.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is using Microsoft Edge for Microsoft 365.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Summary

In this lesson, the learner practiced What a Web Browser Does in M06 Web Browsers. The key idea was browser, Edge, Chrome, Safari, address bar, web page. The learner used a realistic example, such as using Microsoft Edge for Microsoft 365, and practiced safe recovery

M06-L02 Tabs, Windows, and the Address Bar

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain tabs, new tab, close tab, new window, address bar, refresh in simple words.
2. Follow steps to manage several websites without confusion.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as opening Chrome for Google Drive or **saving a Yahoo! JAPAN

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Tabs are like pages in one notebook. Windows are like separate notebooks.

This lesson focuses on tabs, new tab, close tab, new window, address bar, refresh. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

Continue or ask for help

Memory picture:

Tabs, Windows, and the Address Bar

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to manage several websites without confusion."
3. Find the part of the screen, mouse, keyboard, file, or browser related to tabs.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while opening Chrome for Google Drive.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while saving a Yahoo! JAPAN page.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for saving a Yahoo! JAPAN page.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Tabs are like pages in one notebook. Windows are like separate notebooks.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about tabs, new tab, close tab, new window, address bar, refresh.
2. The learner should be able to manage several websites without confusion.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is opening Chrome for Google Drive.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Tabs
- Back: A key idea in Tabs, Windows, and the Address Bar.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Tabs are like pages in one notebook. Windows are like separate notebooks.

Summary

In this lesson, the learner practiced Tabs, Windows, and the Address Bar in M06 Web Browsers. The key idea was tabs, new tab, close tab, new window, address bar, refresh. The learner used a realistic example, such as opening Chrome for Google Drive, and practiced

M06-L03 Bookmarks and Favorites

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain bookmark, favorite, folder, favorites bar, save important sites in simple words.
2. Follow steps to save useful websites for easy return.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as saving a Yahoo! JAPAN page or **printing a city office

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A bookmark is like putting a sticky note on a useful page.

This lesson focuses on bookmark, favorite, folder, favorites bar, save important sites. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

↓

Continue or ask for help

Memory picture:

Bookmarks and Favorites

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to save useful websites for easy return."
3. Find the part of the screen, mouse, keyboard, file, or browser related to bookmark.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while saving a Yahoo! JAPAN page.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while printing a city office webpage.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for printing a city office webpage.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A bookmark is like putting a sticky note on a useful page.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about bookmark, favorite, folder, favorites bar, save important sites.
2. The learner should be able to save useful websites for easy return.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is saving a Yahoo! JAPAN page.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Bookmark
- Back: A key idea in Bookmarks and Favorites.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: A bookmark is like putting a sticky note on a useful page.

Summary

In this lesson, the learner practiced Bookmarks and Favorites in M06 Web Browsers. The key idea was bookmark, favorite, folder, favorites bar, save important sites. The learner used a realistic example, such as saving a Yahoo! JAPAN page, and practiced safe recovery from small mistakes.

M06-L04 History, Downloads, and Basic Privacy

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain history, downloads list, clear history, private window, privacy limits in simple words.
2. Follow steps to find recent pages and understand simple privacy controls.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as printing a city office webpage or bookmarking Japan Post tracking.

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Browser history is like a list of places you visited online.

This lesson focuses on history, downloads list, clear history, private window, privacy limits. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

Continue or ask for help

Memory picture:

History, Downloads, and Basic Privacy

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to find recent pages and understand simple privacy controls."
3. Find the part of the screen, mouse, keyboard, file, or browser related to history.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while printing a city office webpage.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while bookmarking Japan Post tracking.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for bookmarking Japan Post tracking.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Browser history is like a list of places you visited online.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about history, downloads list, clear history, private window, privacy limits.
2. The learner should be able to find recent pages and understand simple privacy controls.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is printing a city office webpage.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: History
- Back: A key idea in History, Downloads, and Basic Privacy.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Browser history is like a list of places you visited online.

Summary

In this lesson, the learner practiced History, Downloads, and Basic Privacy in M06 Web Browsers. The key idea was history, downloads list, clear history, private window, privacy limits. The learner used a realistic example, such as printing a city office webpage, and practiced safe recovery

M06-L05 Browser Settings: Zoom, Language, Home Page, and Default Browser

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain zoom, text size, language, home page, default browser in simple words.
2. Follow steps to adjust the browser for comfort and daily use.
3. Use the skill in an everyday example

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as bookmarking Japan Post tracking or **using Microsoft Edge for Microsoft

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Browser settings are like adjusting a reading lamp, chair, and newspaper size.

This lesson focuses on zoom, text size, language, home page, default browser. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

Continue or ask for help

Memory picture:

Browser Settings: Zoom, Language, Home Page, and Default Browser
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to adjust the browser for comfort and daily use."
3. Find the part of the screen, mouse, keyboard, file, or browser related to zoom.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while bookmarking Japan Post tracking.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while using Microsoft Edge for Microsoft 365.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for using Microsoft Edge for Microsoft 365.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Browser settings are like adjusting a reading lamp, chair, and newspaper size.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about zoom, text size, language, home page, default browser.
2. The learner should be able to adjust the browser for comfort and daily use.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is bookmarking Japan Post tracking.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Zoom

Summary

In this lesson, the learner practiced Browser Settings: Zoom, Language, Home Page, and Default Browser in M06 Web Browsers. The key idea was zoom, text size, language, home page, default browser. The learner used a realistic example, such as bookmarking Japan Post tracking, and practiced

M06-L06 Extensions and Browser Add-ons

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain extension, add-on, permission, install, remove, risk in simple words.
2. Follow steps to understand why extensions can be useful but risky.
3. Use the skill in an everyday example such as

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as using Microsoft Edge for Microsoft 365 or **opening Chrome for

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: An extension is like adding a helper tool to the browser. Choose helpers carefully.

This lesson focuses on extension, add-on, permission, install, remove, risk. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

Continue or ask for help

Memory picture:

Extensions and Browser Add-ons

= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to understand why extensions can be useful but risky."
3. Find the part of the screen, mouse, keyboard, file, or browser related to extension.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while using Microsoft Edge for Microsoft 365.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while opening Chrome for Google Drive.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for opening Chrome for Google Drive.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> An extension is like adding a helper tool to the browser. Choose helpers carefully.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about extension, add-on, permission, install, remove, risk.
2. The learner should be able to understand why extensions can be useful but risky.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is using Microsoft Edge for Microsoft 365.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Extension
- Back: A key idea in Extensions and Browser Add-ons.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: An extension is like adding a helper tool to the browser. Choose helpers carefully.

Summary

In this lesson, the learner practiced Extensions and Browser Add-ons in M06 Web Browsers. The key idea was extension, add-on, permission, install, remove, risk. The learner used a realistic example, such as using Microsoft Edge for Microsoft 365, and practiced safe recovery from small mistakes.

M06-L07 Printing, Saving, and Sharing Web Pages

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain print, save as PDF, share link, copy URL, reader view in simple words.
2. Follow steps to keep useful web information outside the browser.
3. Use the skill in an everyday

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as opening Chrome for Google Drive or **saving a Yahoo! JAPAN

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: Saving a web page as PDF is like making a paper copy for later.

This lesson focuses on print, save as PDF, share link, copy URL, reader view. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

Continue or ask for help

Memory picture:

Printing, Saving, and Sharing Web Pages
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to keep useful web information outside the browser."
3. Find the part of the screen, mouse, keyboard, file, or browser related to print.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while opening Chrome for Google Drive.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while saving a Yahoo! JAPAN page.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for saving a Yahoo! JAPAN page.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.
4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> Saving a web page as PDF is like making a paper copy for later.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about print, save as PDF, share link, copy URL, reader view.
2. The learner should be able to keep useful web information outside the browser.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is opening Chrome for Google Drive.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

Flashcards

Card 1

- Front: Print
- Back: A key idea in Printing, Saving, and Sharing Web Pages.

Card 2

- Front: Pause and Check
- Back: Do one action, then look at the screen.

Card 3

- Front: Safe Practice
- Back: Practice with harmless examples before important tasks.

Card 4

- Front: Ask for Help
- Back: Ask before payment, password, delete, or install actions.

Card 5

- Front: Memory Line
- Back: Saving a web page as PDF is like making a paper copy for later.

Summary

In this lesson, the learner practiced Printing, Saving, and Sharing Web Pages in M06 Web Browsers. The key idea was print, save as PDF, share link, copy URL, reader view. The learner used a realistic example, such as opening Chrome for Google Drive, and practiced

M06-L08 Browser Safety: Scam Pop-Ups, Updates, and Resetting

Learning Objectives

By the end of this lesson, the learner will be able to:

1. Explain pop-up, fake warning, update browser, reset settings, safe closing in simple words.
2. Follow steps to react calmly to suspicious browser messages.
3. Use the skill in an everyday example such

Why This Matters

This lesson gives the learner one more practical computer skill. Learning one small pattern at a time makes the computer feel more useful and less scary.

A browser is the app used to visit websites. Learners need to control tabs, bookmarks, downloads, settings, and safety messages without panic.

This skill can support daily life in Japan, such as saving a Yahoo! JAPAN page or **printing a city office

Prerequisites

Before starting, the learner should have:

- A Windows 11 computer.
- A mouse or touchpad and keyboard.
- A calm place to practice.
- Permission to use practice files, practice websites, or harmless settings.
- Enough time to move slowly.

Lesson Content

Main idea: A scary pop-up is often like a fake alarm. Do not call numbers or click quickly.

This lesson focuses on pop-up, fake warning, update browser, reset settings, safe closing. The teacher should show the action once, then let the learner do it.

Use this teaching pattern:

1. Name it: Say what the item is called.
2. Find it: Point to where it appears.
3. Try it: Do one small action.
4. Check it: Look at what changed.
5. Repeat it: Practice again until it feels familiar.

Important rule: one action at a time. Pause and check after every action.

Visual Explanation

Find the item

↓

Do one small action

↓

Pause

↓

Check what changed

Continue or ask for help

Memory picture:

Browser Safety: Scam Pop-Ups, Updates, and Resetting
= slow steps + careful checking

Step-by-Step Instructions

1. Sit comfortably and look at the screen.
2. Say the goal aloud: "I will learn to react calmly to suspicious browser messages."
3. Find the part of the screen, mouse, keyboard, file, or browser related to pop-up.
4. Do the first small action slowly.
5. Stop for two seconds.
6. Say what changed on the screen.
7. Continue to the next small action.
8. If something looks wrong, stop. Try Back, Cancel, Undo, or ask for help.
9. Repeat the task three times with a practice example.
10. Write one short note about what you learned.

Guided Example

Scenario: The learner practices this skill while saving a Yahoo! JAPAN page.

1. The teacher explains the task in one sentence.
2. The teacher demonstrates the first step slowly.
3. The learner repeats the same step.
4. The learner pauses and says what changed.
5. The learner completes the small task.
6. The teacher asks: "What was easy? What was confusing?"

Second practice idea: repeat the skill while printing a city office webpage.

Practice Exercise

Complete this practice:

1. Start from the normal screen.
2. Perform the main action from this lesson.
3. Stop and explain what changed.
4. Repeat with a second harmless example.
5. Ask yourself: "Did I click or type only what I intended?"
6. Write the memory line in a notebook.

Practice target: three calm repetitions, not fast repetitions.

Challenge Exercise

After normal practice, try a new situation without the teacher touching the mouse or keyboard.

1. Use the skill for printing a city office webpage.
2. Explain each step aloud.
3. Recover from one small mistake if it happens.

4. Teach the steps back to another person.

Focus on independence, not speed.

Common Mistakes

- Clicking before reading the screen.
- Double-clicking when one click is enough.
- Forgetting to check what changed.
- Closing the wrong window or tab.
- Using unclear names or confusing choices.
- Thinking a small mistake means the computer is broken.
- Continuing when a message feels unsafe.

Troubleshooting

| Problem | What to Try | |---|---| | The screen looks different | Look for similar words or icons. | | Nothing happens | Check the pointer or cursor and try once more slowly. | | Too many things are open | Close unneeded windows or choose the correct one from the taskbar. | | Text is hard to read | Increase zoom or ask to adjust display size. |

Memory Reinforcement

Repeat these sentences:

1. "I do one action at a time."
2. "I pause and check the screen."
3. "If I am unsure, I stop and ask."

Memory phrase:

> A scary pop-up is often like a fake alarm. Do not call numbers or click quickly.

Quick Notes

- Slow is okay.
- Read before clicking.
- Practice with harmless examples.
- Use clear names and simple routines.
- Ask before payment, password, delete, or install actions.
- Screens may look slightly different after updates; focus on the idea.

Quiz Answers

1. It is about pop-up, fake warning, update browser, reset settings, safe closing.
2. The learner should be able to react calmly to suspicious browser messages.
3. Pause and check what changed on the screen.
4. It reduces mistakes and builds confidence.
5. Stop, read it, and ask for help if it seems important.
6. One example is saving a Yahoo! JAPAN page.
7. Accuracy and calm thinking are better than speed.
8. Try Back, Cancel, Undo, or close the harmless window.
9. Speaking aloud helps memory and shows understanding.
10. When the learner can repeat the basic task with less help.

- Back: A scary pop-up is often like a fake alarm. Do not call numbers or click quickly.

Summary

In this lesson, the learner practiced Browser Safety: Scam Pop-Ups, Updates, and Resetting in M06 Web Browsers. The key idea was pop-up, fake warning, update browser, reset settings, safe closing. The learner used a realistic example, such as saving a Yahoo! JAPAN page, and practiced

M06 Module Review: Web Browsers

Big Review Idea

In this module, the learner practiced the foundation skills for Web Browsers. The goal was to teach learners to use Microsoft Edge, Google Chrome, and other browsers for everyday browsing, bookmarks, downloads, privacy, printing, and safety.

The learner does not need to remember every detail perfectly. The learner should remember the repeated safety habit:

> Do one action. Pause. Check what changed. Continue only when it makes sense.

Lessons Reviewed

- M06-L01 What a Web Browser Does: browser, Edge, Chrome, Safari, address bar, web page.
- M06-L02 Tabs, Windows, and the Address Bar: tabs, new tab, close tab, new window, address bar, refresh.
- M06-L03 Bookmarks and Favorites: bookmark, favorite, folder, favorites bar, save important sites.
- M06-L04 History, Downloads, and Basic Privacy: history, downloads list, clear history, private window, privacy limits.
- M06-L05 Browser Settings: Zoom, Language, Home Page, and Default Browser: zoom, text size, language, home page, default browser.
- M06-L06 Extensions and Browser Add-ons: extension, add-on, permission, install, remove, risk.
- M06-L07 Printing, Saving, and Sharing Web Pages: print, save as PDF, share link, copy URL, reader view.
- M06-L08 Browser Safety: Scam Pop-Ups, Updates, and Resetting: pop-up, fake warning, update browser, reset settings, safe closing.

Key Vocabulary Review

- Action: Something the learner does, such as click, type, save, search, open, close, copy, or choose. - Screen feedback: The change the learner sees after an action. - Safe habit: A

M06 Module Quiz: Web Browsers

1. Which lesson teaches about browser?
2. Which lesson teaches about tabs?
3. Which lesson teaches about bookmark?
4. Which lesson teaches about history?
5. Which lesson teaches about zoom?
6. Which lesson teaches about extension?
7. Which lesson teaches about print?
8. Which lesson teaches about pop-up?
9. What should a learner do after each click or key press?
10. What should a learner do if a message mentions money, deletion, passwords, or installation?
11. Why is practice with harmless examples useful?
12. What is more important for senior beginners: speed or accuracy?
13. Why should lesson notes use simple words?
14. What is one sign the learner should ask for help?
15. How can the learner remember the module?
16. What is a browser used for?
17. What is a tab?
18. Why are bookmarks useful?
19. Why should browser extensions be installed carefully?
20. What should you do if a browser pop-up says your computer is infected?

M06 Practical Assessment: Web Browsers

Assessment Purpose

This practical assessment checks whether the learner can use the module skills in real life, not only remember quiz answers. The teacher should allow extra time and should not interrupt too quickly. The learner may use the cheat sheet.

Setup

- Use a Windows 11 computer.
- Use practice files, practice websites, or harmless settings.
- Do not use real bank accounts, payments, private medical records, or important official forms during assessment.
- Keep the environment calm and quiet.

Assessment Tasks

1. Demonstrate one safe action from M06-L01 What a Web Browser Does and explain what changed on the screen.
2. Demonstrate one safe action from M06-L02 Tabs, Windows, and the Address Bar and explain what changed on the screen.
3. Demonstrate one safe action from M06-L03 Bookmarks and Favorites and explain what changed on the screen.
4. Demonstrate one safe action from M06-L04 History, Downloads, and Basic Privacy and explain what changed on the screen.
5. Demonstrate one safe action from M06-L05 Browser Settings: Zoom, Language, Home Page, and Default Browser and explain what changed on the screen.
6. Demonstrate one safe action from M06-L06 Extensions and Browser Add-ons and explain what changed on the screen.
7. Demonstrate one safe action from M06-L07 Printing, Saving, and Sharing Web Pages and explain what changed on the screen.
8. Demonstrate one safe action from M06-L08 Browser Safety: Scam Pop-Ups, Updates, and Resetting and explain what changed

M06 Flashcards: Web Browsers

Cut these into cards or import them into an LMS flashcard tool.

Card 1

Front: M06-L01 What a Web Browser Does

Back: A browser is a window for looking at websites.

Card 2

Front: Browser

Back: A core concept from What a Web Browser Does.

Card 3

Front: M06-L02 Tabs, Windows, and the Address Bar

Back: Tabs are like pages in one notebook. Windows are like separate notebooks.

Card 4

Front: Tabs

Back: A core concept from Tabs, Windows, and the Address Bar.

Card 5

Front: M06-L03 Bookmarks and Favorites

Back: A bookmark is like putting a sticky note on a useful page.

Card 6

Front: Bookmark

Back: A core concept from Bookmarks and Favorites.

Card 7

Front: M06-L04 History, Downloads, and Basic Privacy

Back: Browser history is like a list of places you visited online.

Card 8

Front: History

Back: A core concept from History, Downloads, and Basic Privacy.

Card 9

Front: M06-L05 Browser Settings: Zoom, Language, Home Page, and Default Browser

Back: Browser settings are like adjusting a reading lamp, chair, and newspaper size.

Card 10

Front: Zoom

Back: A core concept from Browser Settings: Zoom, Language, Home Page, and Default Browser.

M06 Cheat Sheet: Web Browsers

Main Safety Habit

Do one action → pause → check what changed → continue only if it makes sense.

Lesson Memory Lines

- M06-L01 What a Web Browser Does: Remember - A browser is a window for looking at websites.
- M06-L02 Tabs, Windows, and the Address Bar: Remember - Tabs are like pages in one notebook. Windows are like separate notebooks.
- M06-L03 Bookmarks and Favorites: Remember - A bookmark is like putting a sticky note on a useful page.
- M06-L04 History, Downloads, and Basic Privacy: Remember - Browser history is like a list of places you visited online.
- M06-L05 Browser Settings: Zoom, Language, Home Page, and Default Browser: Remember - Browser settings are like adjusting a reading lamp, chair, and newspaper size.
- M06-L06 Extensions and Browser Add-ons: Remember - An extension is like adding a helper tool to the browser. Choose helpers carefully.
- M06-L07 Printing, Saving, and Sharing Web Pages: Remember - Saving a web page as PDF is like making a paper copy for later.
- M06-L08 Browser Safety: Scam Pop-Ups, Updates, and Resetting: Remember - A scary pop-up is often like a fake alarm. Do not call numbers or click quickly.

M07 Email

M07-L01 What Email Is and How It Works

Learning Objectives

By the end of this lesson, the learner can:

- Understand what email is, what an address means, and how messages move from sender to receiver. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Email address parts: name, @ symbol, and domain. Notice this idea on the screen and connect it to a real task.
- Inbox, sent mail, drafts, spam, and trash. Notice this idea on the screen and connect it to a real task.
- Why email is still useful for hospitals, banks, travel, city offices, and family. Notice this idea on the screen and connect it to a real task.
- Difference between email and LINE messages. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand what email is, what an address means, and how messages move from sender to receiver

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Look at your email address and identify the part before @ and after @.
2. Open Gmail or Yahoo Japan Mail and find Inbox, Sent, Drafts, Spam, and Trash.
3. Send a short test message to yourself with the subject "Practice Email".

4. Open the received message and reply with one polite sentence.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: a senior in Japan receiving a clinic appointment notice by Gmail and replying to confirm the date.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Look at your email address and identify the part before @ and after @.
2. Open Gmail or Yahoo Japan Mail and find Inbox, Sent, Drafts, Spam, and Trash.
3. Send a short test message to yourself with the subject "Practice Email".
4. Open the received message and reply with

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots.
- Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu.
- Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help.
- Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand what email is, what an address means, and how messages move from sender to receiver.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. a senior in Japan receiving a clinic appointment notice by Gmail and replying to confirm the date.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- What Email Is and How It Works: Understand what email is, what an address means, and how messages move from sender to receiver.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced what email is and how it works. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07-L02 Gmail and Yahoo Japan Mail Basics

Learning Objectives

By the end of this lesson, the learner can:

- Open, read, reply, and compose email using common Japanese personal email services. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Gmail layout: compose button, search bar, labels, star, and archive. Notice this idea on the screen and connect it to a real task.
- Yahoo Japan Mail layout: mail list, folders, search, and reply. Notice this idea on the screen and connect it to a real task.
- How to open an email safely before clicking anything. Notice this idea on the screen and connect it to a real task.
- How to check sender name and email address. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to open, read, reply, and compose email using common Japanese personal email services

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open Gmail or Yahoo Japan Mail.
2. Find one safe old message, such as a newsletter or family message.
3. Use Reply, type a short thank-you message, then discard it if it is only practice.

4. Create a new email draft to yourself and save it without sending.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: using Yahoo Japan Mail to receive a Rakuten order confirmation and Gmail to send a family update.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Gmail or Yahoo Japan Mail. 2. Find one safe old message, such as a newsletter or family message. 3. Use Reply, type a short thank-you message, then discard it if it is only practice. 4. Create a new email draft to yourself and save it without sending. 5. Write

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To open, read, reply, and compose email using common Japanese personal email services.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. using Yahoo Japan Mail to receive a Rakuten order confirmation and Gmail to send a family update.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Gmail and Yahoo Japan Mail Basics: Open, read, reply, and compose email using common Japanese personal email services.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced gmail and yahoo japan mail basics. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07-L03 Outlook and Microsoft 365 Mail Basics

Learning Objectives

By the end of this lesson, the learner can:

- Use outlook email for personal, school, office, or microsoft 365 communication. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Outlook web and Outlook app basics. Notice this idea on the screen and connect it to a real task.
- Focused Inbox, folders, calendar links, and attachments. Notice this idea on the screen and connect it to a real task.
- How Outlook connects with Word, Excel, PowerPoint, and OneDrive. Notice this idea on the screen and connect it to a real task.
- How to avoid confusion between Outlook email and Microsoft account login. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use Outlook email for personal, school, office, or Microsoft 365 communication
↓
Open the correct tool
↓
Do one small action
↓
Check the result
↓
Finish safely

Step-by-Step Instructions

1. Open Outlook or Microsoft 365 mail.
2. Find Inbox, Sent Items, Drafts, Deleted Items, and Junk Email.
3. Compose a message with a clear subject.

4. Attach a small practice document from OneDrive if available.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: sending a Microsoft 365 email with a Word document attached to a community center staff member.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Outlook or Microsoft 365 mail.
2. Find Inbox, Sent Items, Drafts, Deleted Items, and Junk Email.
3. Compose a message with a clear subject.
4. Attach a small practice document from OneDrive if available.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.

- Keep practice separate from real private documents.

Quiz Answers

1. To use Outlook email for personal, school, office, or Microsoft 365 communication.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. sending a Microsoft 365 email with a Word document attached to a community center staff member.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Outlook and Microsoft 365 Mail Basics: Use outlook email for personal, school, office, or microsoft 365 communication.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced outlook and microsoft 365 mail basics. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07-L04 Writing Clear Emails and Adding Attachments

Learning Objectives

By the end of this lesson, the learner can:

- Write polite email messages and attach files without confusion. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Subject lines that explain the purpose. Notice this idea on the screen and connect it to a real task.
- Simple greetings and closings. Notice this idea on the screen and connect it to a real task.
- Attachments: Word files, PDFs, photos, and Excel sheets. Notice this idea on the screen and connect it to a real task.
- File size, file names, and checking before sending. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to write polite email messages and attach files without confusion

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Write a clear subject such as “Question About Appointment on 12 June”.
2. Begin with a polite greeting.
3. Write only one main topic in the email.
4. Attach the correct file and check the filename before sending.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: emailing a scanned medical form as a PDF to a family member for checking.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Write a clear subject such as “Question About Appointment on 12 June”.
2. Begin with a polite greeting.
3. Write only one main topic in the email.
4. Attach the correct file and check the filename before sending.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: “I check first, then I click.”

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To write polite email messages and attach files without confusion.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. emailing a scanned medical form as a PDF to a family member for checking.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Writing Clear Emails and Adding Attachments: Write polite email messages and attach files without confusion.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced writing clear emails and adding attachments. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07-L05 Organizing Email: Search, Labels, Folders, and Archive

Learning Objectives

By the end of this lesson, the learner can:

- Keep an email inbox easy to use by organizing and finding old messages. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Search by sender, subject, keyword, and date. Notice this idea on the screen and connect it to a real task.
- Gmail labels and Outlook folders. Notice this idea on the screen and connect it to a real task.
- Archive versus delete. Notice this idea on the screen and connect it to a real task.
- Star, flag, and mark unread for later. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to keep an email inbox easy to use by organizing and finding old messages

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Search for an old message by typing one keyword.
2. Create a folder or label named "Important Documents".
3. Move or label one safe practice email.
4. Archive a newsletter instead of deleting it.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: finding a past PayPay or Rakuten email by searching the store name and the month.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Search for an old message by typing one keyword.
2. Create a folder or label named "Important Documents".
3. Move or label one safe practice email.
4. Archive a newsletter instead of deleting it.
5. Write one sentence in your notebook about what you practiced.

- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To keep an email inbox easy to use by organizing and finding old messages.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. finding a past PayPay or Rakuten email by searching the store name and the month.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Organizing Email: Keep an email inbox easy to use by organizing and finding old messages.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced organizing email: search, labels, folders, and archive. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07-L06 Email Safety: Spam, Phishing, Links, and Attachments

Learning Objectives

By the end of this lesson, the learner can:

- Recognize risky email and use safe habits before opening links or files. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Sender address checking. Notice this idea on the screen and connect it to a real task.
- Urgent scam language and fake login pages. Notice this idea on the screen and connect it to a real task.
- Safe attachment habits. Notice this idea on the screen and connect it to a real task.
- When to use spam, block, report phishing, or delete. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to recognize risky email and use safe habits before opening links or files

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Stop before clicking a link.
2. Check the sender address slowly.
3. Do not open unexpected ZIP, EXE, or strange attachments.
4. Use Report phishing or Move to spam when a message looks suspicious.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: a fake Yahoo Japan Mail or bank message asking the learner to “verify account immediately”.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Stop before clicking a link.
2. Check the sender address slowly.
3. Do not open unexpected ZIP, EXE, or strange attachments.
4. Use Report phishing or Move to spam when a message looks suspicious.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: “I check first, then I click.”

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.

Quiz Answers

1. To recognize risky email and use safe habits before opening links or files.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. a fake Yahoo Japan Mail or bank message asking the learner to “verify account immediately”.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Email Safety: Recognize risky email and use safe habits before opening links or files.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced email safety: spam, phishing, links, and attachments. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07-L07 Email Practice for Daily Japanese Life

Learning Objectives

By the end of this lesson, the learner can:

- Combine reading, writing, organizing, and safety into realistic email tasks. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Appointment email. Notice this idea on the screen and connect it to a real task.
- Travel or hotel email. Notice this idea on the screen and connect it to a real task.
- Family photo email. Notice this idea on the screen and connect it to a real task.
- Online shopping confirmation. Notice this idea on the screen and connect it to a real task.
- Safe handling of official-looking messages. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to combine reading, writing, organizing, and safety into realistic email tasks

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create three practice emails: family, appointment, and shopping question.
2. Add one safe attachment to the family email draft.
3. Search for one old message and move it into a folder or label.
4. Review one suspicious sample message and explain why you would not click.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: planning a Tokyo day trip by emailing a friend, saving the itinerary, and keeping the confirmation email.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create three practice emails: family, appointment, and shopping question.
2. Add one safe attachment to the family email draft.
3. Search for one old message and move it into a folder or label.
4. Review one suspicious sample message and explain why you would not click.
5. Write one sentence

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots.
- Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu.
- Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help.
- Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To combine reading, writing, organizing, and safety into realistic email tasks.
2. Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. planning a Tokyo day trip by emailing a friend, saving the itinerary, and keeping the confirmation email.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Email Practice for Daily Japanese Life: Combine reading, writing, organizing, and safety into realistic email tasks.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced email practice for daily Japanese life. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M07 Module Review - Email

Module Purpose

The purpose of M07 Email is to help a senior learner send, receive, organize, and protect email in daily life. This module is written for senior beginners who may forget steps, worry about mistakes, or feel nervous when a screen changes. The module uses simple English and Japan-focused examples, including Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.

Lesson Numbering and Titles

- M07-L01 What Email Is and How It Works - Understand what email is, what an address means, and how messages move from sender to receiver.
- M07-L02 Gmail and Yahoo Japan Mail Basics - Open, read, reply, and compose email using common Japanese personal email services.
- M07-L03 Outlook and Microsoft 365 Mail Basics - Use outlook email for personal, school, office, or microsoft 365 communication.
- M07-L04 Writing Clear Emails and Adding Attachments - Write polite email messages and attach files without confusion.
- M07-L05 Organizing Email: Search, Labels, Folders, and Archive - Keep an email inbox easy to use by organizing and finding old messages.
- M07-L06 Email Safety: Spam, Phishing, Links, and Attachments - Recognize risky email and use safe habits before opening links or files.
- M07-L07 Email Practice for Daily Japanese Life - Combine reading, writing, organizing, and safety into realistic email tasks.

Big Ideas to Remember

1. One task at a time. Do not mix too many actions.
2. Check the place. Know which app, folder, account,

M07 Module Quiz - Email

1. In M07-L01, what is the main skill?
2. Give one real-life example for What Email Is and How It Works.
3. In M07-L02, what is the main skill?
4. Give one real-life example for Gmail and Yahoo Japan Mail Basics.
5. In M07-L03, what is the main skill?
6. Give one real-life example for Outlook and Microsoft 365 Mail Basics.
7. In M07-L04, what is the main skill?
8. Give one real-life example for Writing Clear Emails and Adding Attachments.
9. In M07-L05, what is the main skill?
10. Give one real-life example for Organizing Email: Search, Labels, Folders, and Archive.
11. In M07-L06, what is the main skill?
12. Give one real-life example for Email Safety: Spam, Phishing, Links, and Attachments.
13. In M07-L07, what is the main skill?
14. Give one real-life example for Email Practice for Daily Japanese Life.
15. Why should a senior learner use practice files first?
16. What should you check before sharing something?
17. What should you do before printing?
18. What should you do if an email or cloud link looks suspicious?
19. Why are clear titles and file names useful?
20. Which services are used as examples in this module?

M07 Practical Assessment - Email

Assessment Purpose

This practical assessment checks whether the learner can use Email skills in a calm and safe way. The assessment should use practice accounts and sample files only. Do not use real bank, payment, My Number Card, password, or medical information.

Tools and Examples

Suggested tools/examples: Gmail, Outlook, Microsoft 365, Yahoo Japan Mail.

Performance Tasks

- Task 1: Complete a safe practice activity from M07-L01 What Email Is and How It Works. Expected result: the learner can understand what email is, what an address means, and how messages move from sender to receiver. - Task 2: Complete a safe practice activity from M07-L02 Gmail and Yahoo Japan Mail Basics. Expected result: the learner can open, read, reply, and compose email using common Japanese personal email services. - Task 3: Complete a safe practice activity from M07-L03 Outlook and Microsoft 365 Mail Basics. Expected result: the learner can use Outlook email for personal, school, office, or Microsoft 365 communication. - Task 4: Complete a safe practice activity from M07-L04 Writing Clear Emails and Adding Attachments. Expected result: the learner can write polite email messages and attach files without confusion. - Task 5: Complete a safe practice activity from M07-L05 Organizing Email: Search, Labels, Folders, and Archive. Expected result: the learner can keep an email inbox easy to use by organizing and finding old messages. - Task 6: Complete a safe practice activity from **M07-L06 Email Safety: Spam,

M07 Module Flashcards - Email

Use these flashcards for quick review. Read the front first, then cover the back and try to explain it in your own words.

1. What Email Is and How It Works - Understand what email is, what an address means, and how messages move from sender to receiver.
2. Email address parts: name, @ symbol, and domain - A key idea in M07-L01. It helps the learner complete tasks more safely and clearly.
3. Inbox, sent mail, drafts, spam, and trash - A key idea in M07-L01. It helps the learner complete tasks more safely and clearly.
4. Gmail and Yahoo Japan Mail Basics - Open, read, reply, and compose email using common japanese personal email services.
5. Gmail layout: compose button, search bar, labels, star, and archive - A key idea in M07-L02. It helps the learner complete tasks more safely and clearly.
6. Yahoo Japan Mail layout: mail list, folders, search, and reply - A key idea in M07-L02. It helps the learner complete tasks more safely and clearly.
7. Outlook and Microsoft 365 Mail Basics - Use outlook email for personal, school, office, or microsoft 365 communication.
8. Outlook web and Outlook app basics - A key idea in M07-L03. It helps the learner complete tasks more safely and clearly.
9. Focused Inbox, folders, calendar links, and attachments - A key idea in M07-L03. It helps the learner complete tasks more safely and clearly.
10. Writing Clear Emails and Adding Attachments - Write polite email messages and attach files without confusion.
11. Subject lines that explain the purpose - A key idea in M07-L04. It helps the learner complete tasks more safely and clearly.
12. Simple greetings and closings - A key idea in M07-L04. It helps the learner complete tasks more safely and clearly.
13. Organizing Email: Search, Labels, Folders, and Archive - Keep an email inbox easy to use by organizing and finding old messages.
14. Search by sender, subject, keyword, and date - A key idea in M07-L05. It helps the learner complete tasks more safely and clearly.
15. Gmail labels and Outlook folders - A key idea in M07-L05. It helps the learner complete tasks more safely and clearly.
16. Email Safety: Spam, Phishing, Links, and Attachments - Recognize risky email and use safe habits before opening links or files.
17. Sender address checking - A key idea in M07-L06. It helps the learner complete tasks more safely and clearly.
18. Urgent scam language and fake login pages - A key idea in M07-L06. It helps the learner complete tasks more safely and clearly.
19. Email Practice for Daily Japanese Life - Combine reading, writing, organizing, and safety into realistic email tasks.
20. Appointment email - A key idea in M07-L07. It helps the learner complete tasks more safely and clearly.
21. Travel or hotel email - A key idea in M07-L07. It helps the learner complete tasks more safely and clearly.
22. Stop-check-click - Pause, check the screen, then click only when ready.

- 23. Practice file - A safe file used for learning instead of a real private file.
- 24. View-only sharing - Permission that lets someone see a file but not change it.
- 25. Preview - A final check screen before printing, sending, or exporting.
- 26. Clear file name - A name that includes topic and date so the file is easy to find later.
- 27. Ask for help - The correct action when money, password, identity, banking, or urgent warning appears.

Review Method

Use five cards per day. A senior learner should not try to memorize all cards in one sitting. Repetition over many days is better than one long study session.

M07 Cheat Sheet - Email

Main Tools / Examples

Gmail, Outlook, Microsoft 365, Yahoo Japan Mail

Universal Senior-Friendly Routine

1. Say the task: "I am doing ____."
2. Check the app, account, file, folder, printer, or recipient.
3. Do one action at a time.
4. Preview or confirm the result.
5. Save, send, share, print, or close only after checking.

Lesson Quick Guide

M07-L01 What Email Is and How It Works - Goal: Understand what email is, what an address means, and how messages move from sender to receiver. - Remember: Email address parts: name, @ symbol, and domain. - Daily example: a senior in Japan receiving a clinic appointment notice by Gmail and replying to confirm the date. ### M07-L02 Gmail and Yahoo Japan Mail Basics - Goal: Open, read, reply, and compose email using common japanese personal email services. - Remember: Gmail layout: compose button, search bar, labels, star, and archive. - Daily example: using Yahoo Japan Mail to receive a Rakuten order confirmation and Gmail to send a family update. ### M07-L03 Outlook and Microsoft 365 Mail Basics - Goal: Use outlook email for personal, school, office, or microsoft 365 communication. - Remember: Outlook web and Outlook app basics. - Daily example: sending

M08 Microsoft Word

M08-L01 Getting Started with Microsoft Word

Learning Objectives

By the end of this lesson, the learner can:

- Understand what word is and how to open, read, and create a document. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Word as a document writing tool. Notice this idea on the screen and connect it to a real task.
- Blank document versus template. Notice this idea on the screen and connect it to a real task.
- Ribbon, tabs, page area, cursor, and status bar. Notice this idea on the screen and connect it to a real task.
- Saving documents in Microsoft 365 or local computer. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand what Word is and how to open, read, and create a document

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open Microsoft Word.
2. Choose Blank Document.
3. Type your name, today's date, and one sentence.
4. Save the file as "Word Practice 01".

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: creating a simple notice for a senior club meeting in Japan.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Microsoft Word.
2. Choose Blank Document.
3. Type your name, today's date, and one sentence.
4. Save the file as "Word Practice 01".
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots.
- Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu.
- Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help.
- Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand what Word is and how to open, read, and create a document.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. creating a simple notice for a senior club meeting in Japan.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Getting Started with Microsoft Word: Understand what word is and how to open, read, and create a document.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced getting started with microsoft word. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08-L02 Typing, Editing, and Saving Documents

Learning Objectives

By the end of this lesson, the learner can:

- Type comfortably, fix mistakes, and save safely without losing work. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Cursor movement, clicking, selecting, backspace, delete, undo, redo. Notice this idea on the screen and connect it to a real task.
- Japanese and English input switching. Notice this idea on the screen and connect it to a real task.
- Save and Save As. Notice this idea on the screen and connect it to a real task.
- Autosave with OneDrive and manual save on computer. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to type comfortably, fix mistakes, and save safely without losing work

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Type five short lines.
2. Practice selecting one word and changing it.
3. Use Undo and Redo.
4. Save a copy with a new name.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: writing a short thank-you letter in English with a Japanese address line.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Type five short lines.
2. Practice selecting one word and changing it.
3. Use Undo and Redo.
4. Save a copy with a new name.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.

Quiz Answers

1. To type comfortably, fix mistakes, and save safely without losing work.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. writing a short thank-you letter in English with a Japanese address line.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Typing, Editing, and Saving Documents: Type comfortably, fix mistakes, and save safely without losing work.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced typing, editing, and saving documents. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08-L03 Formatting Text and Paragraphs

Learning Objectives

By the end of this lesson, the learner can:

- Make documents easier to read by changing font, size, spacing, and alignment. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Font family and size. Notice this idea on the screen and connect it to a real task.
- Bold, italic, underline, and color used carefully. Notice this idea on the screen and connect it to a real task.
- Left, center, right alignment. Notice this idea on the screen and connect it to a real task.
- Line spacing and paragraph spacing. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to make documents easier to read by changing font, size, spacing, and alignment

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Select a title and make it larger.
2. Make one important word bold.
3. Center the title.
4. Add space between paragraphs.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: formatting a printed instruction sheet for paying a bill at a convenience store.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Select a title and make it larger.
2. Make one important word bold.
3. Center the title.
4. Add space between paragraphs.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.

- Keep practice separate from real private documents.

Quiz Answers

1. To make documents easier to read by changing font, size, spacing, and alignment.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. formatting a printed instruction sheet for paying a bill at a convenience store.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Formatting Text and Paragraphs: Make documents easier to read by changing font, size, spacing, and alignment.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced formatting text and paragraphs. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08-L04 Lists, Tables, and Pictures

Learning Objectives

By the end of this lesson, the learner can:

- Add structure and images to make a document more useful. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Bulleted and numbered lists. Notice this idea on the screen and connect it to a real task.
- Simple tables. Notice this idea on the screen and connect it to a real task.
- Inserting pictures. Notice this idea on the screen and connect it to a real task.
- Moving and resizing pictures safely. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to add structure and images to make a document more useful

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create a shopping list with bullets.
2. Create a two-column table for date and task.
3. Insert one picture.
4. Resize the picture from the corner, not the side.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: making a travel packing list for Kyoto with a small photo.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create a shopping list with bullets.
2. Create a two-column table for date and task.
3. Insert one picture.
4. Resize the picture from the corner, not the side.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To add structure and images to make a document more useful.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.

4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. making a travel packing list for Kyoto with a small photo.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Lists, Tables, and Pictures: Add structure and images to make a document more useful.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced lists, tables, and pictures. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08-L05 Page Layout, Headers, Footers, and Printing

Learning Objectives

By the end of this lesson, the learner can:

- Prepare a word document for paper or pdf output. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Margins and page size. Notice this idea on the screen and connect it to a real task.
- Header and footer. Notice this idea on the screen and connect it to a real task.
- Page numbers. Notice this idea on the screen and connect it to a real task.
- Print preview and PDF export. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to prepare a Word document for paper or PDF output

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open Page Layout settings.
2. Add a header with your name.
3. Add page numbers.
4. Use Print Preview before printing.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: preparing a one-page community notice to print on A4 paper.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Page Layout settings.
2. Add a header with your name.
3. Add page numbers.
4. Use Print Preview before printing.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To prepare a Word document for paper or PDF output.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. preparing a one-page community notice to print on A4 paper.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Page Layout, Headers, Footers, and Printing: Prepare a word document for paper or pdf output.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced page layout, headers, footers, and printing. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08-L06 Review, Comments, and Sharing with OneDrive

Learning Objectives

By the end of this lesson, the learner can:

- Use word with family, classmates, or staff by sharing and adding comments. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Comments and track changes in simple use. Notice this idea on the screen and connect it to a real task.
- Sharing from OneDrive. Notice this idea on the screen and connect it to a real task.
- View-only versus edit permission. Notice this idea on the screen and connect it to a real task.
- Why to check the recipient before sharing. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use Word with family, classmates, or staff by sharing and adding comments

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Save a Word file to OneDrive.
2. Add one comment to a sentence.
3. Use Share and choose view-only permission.
4. Copy a sharing link but do not send it during practice.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: asking a family member to check a Word letter before printing.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Save a Word file to OneDrive.
2. Add one comment to a sentence.
3. Use Share and choose view-only permission.
4. Copy a sharing link but do not send it during practice.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To use Word with family, classmates, or staff by sharing and adding comments.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. asking a family member to check a Word letter before printing.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Review, Comments, and Sharing with OneDrive: Use word with family, classmates, or staff by sharing and adding comments.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced review, comments, and sharing with onedrive. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08-L07 Creating Useful Daily Documents

Learning Objectives

By the end of this lesson, the learner can:

- Make real documents that seniors can use in daily life. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Personal checklist. Notice this idea on the screen and connect it to a real task.
- Medication or appointment sheet. Notice this idea on the screen and connect it to a real task.
- Simple resume or profile. Notice this idea on the screen and connect it to a real task.
- Community event announcement. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to make real documents that seniors can use in daily life

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Choose one daily document type.
2. Start from a blank document.
3. Use title, sections, lists, and one table.
4. Save both Word and PDF versions.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: creating a “Hospital Visit Checklist” document with items to bring, questions, and contact information.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Choose one daily document type.
2. Start from a blank document.
3. Use title, sections, lists, and one table.
4. Save both Word and PDF versions.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: “I check first, then I click.”

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To make real documents that seniors can use in daily life.
2. Microsoft Word, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. creating a “Hospital Visit Checklist” document with items to bring, questions, and contact information.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Creating Useful Daily Documents: Make real documents that seniors can use in daily life.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced creating useful daily documents. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M08 Module Review - Microsoft Word

Module Purpose

The purpose of M08 Microsoft Word is to help a senior learner create, edit, format, save, share, and print useful documents. This module is written for senior beginners who may forget steps, worry about mistakes, or feel nervous when a screen changes. The module uses simple English and Japan-focused examples, including Microsoft Word, Microsoft 365, OneDrive.

Lesson Numbering and Titles

- M08-L01 Getting Started with Microsoft Word - Understand what word is and how to open, read, and create a document.
- M08-L02 Typing, Editing, and Saving Documents - Type comfortably, fix mistakes, and save safely without losing work.
- M08-L03 Formatting Text and Paragraphs - Make documents easier to read by changing font, size, spacing, and alignment.
- M08-L04 Lists, Tables, and Pictures - Add structure and images to make a document more useful.
- M08-L05 Page Layout, Headers, Footers, and Printing - Prepare a word document for paper or pdf output.
- M08-L06 Review, Comments, and Sharing with OneDrive - Use word with family, classmates, or staff by sharing and adding comments.
- M08-L07 Creating Useful Daily Documents - Make real documents that seniors can use in daily life.

Big Ideas to Remember

1. One task at a time. Do not mix too many actions.
2. Check the place. Know which app, folder, account, file, or printer you are using.
3. Use clear names. A clear name is better than a clever name.

M08 Module Quiz - Microsoft Word

1. In M08-L01, what is the main skill?
2. Give one real-life example for Getting Started with Microsoft Word.
3. In M08-L02, what is the main skill?
4. Give one real-life example for Typing, Editing, and Saving Documents.
5. In M08-L03, what is the main skill?
6. Give one real-life example for Formatting Text and Paragraphs.
7. In M08-L04, what is the main skill?
8. Give one real-life example for Lists, Tables, and Pictures.
9. In M08-L05, what is the main skill?
10. Give one real-life example for Page Layout, Headers, Footers, and Printing.
11. In M08-L06, what is the main skill?
12. Give one real-life example for Review, Comments, and Sharing with OneDrive.
13. In M08-L07, what is the main skill?
14. Give one real-life example for Creating Useful Daily Documents.
15. Why should a senior learner use practice files first?
16. What should you check before sharing something?
17. What should you do before printing?
18. What should you do if an email or cloud link looks suspicious?
19. Why are clear titles and file names useful?
20. Which services are used as examples in this module?

M08 Practical Assessment - Microsoft Word

Assessment Purpose

This practical assessment checks whether the learner can use Microsoft Word skills in a calm and safe way. The assessment should use practice accounts and sample files only. Do not use real bank, payment, My Number Card, password, or medical information.

Tools and Examples

Suggested tools/examples: Microsoft Word, Microsoft 365, OneDrive.

Performance Tasks

- Task 1: Complete a safe practice activity from M08-L01 Getting Started with Microsoft Word. Expected result: the learner can understand what Word is and how to open, read, and create a document. - Task 2: Complete a safe practice activity from M08-L02 Typing, Editing, and Saving Documents. Expected result: the learner can type comfortably, fix mistakes, and save safely without losing work. - Task 3: Complete a safe practice activity from M08-L03 Formatting Text and Paragraphs. Expected result: the learner can make documents easier to read by changing font, size, spacing, and alignment. - Task 4: Complete a safe practice activity from M08-L04 Lists, Tables, and Pictures. Expected result: the learner can add structure and images to make a document more useful. - Task 5: Complete a safe practice activity from M08-L05 Page Layout, Headers, Footers, and Printing. Expected result: the learner can prepare a Word document for paper or PDF output. - Task 6: Complete a safe practice activity from M08-L06 Review, Comments, and Sharing with OneDrive. Expected result: the learner can use Word with family, classmates, or staff by

M08 Module Flashcards - Microsoft Word

Use these flashcards for quick review. Read the front first, then cover the back and try to explain it in your own words.

1. Getting Started with Microsoft Word - Understand what word is and how to open, read, and create a document.
2. Word as a document writing tool - A key idea in M08-L01. It helps the learner complete tasks more safely and clearly.
3. Blank document versus template - A key idea in M08-L01. It helps the learner complete tasks more safely and clearly.
4. Typing, Editing, and Saving Documents - Type comfortably, fix mistakes, and save safely without losing work.
5. Cursor movement, clicking, selecting, backspace, delete, undo, redo - A key idea in M08-L02. It helps the learner complete tasks more safely and clearly.
6. Japanese and English input switching - A key idea in M08-L02. It helps the learner complete tasks more safely and clearly.
7. Formatting Text and Paragraphs - Make documents easier to read by changing font, size, spacing, and alignment.
8. Font family and size - A key idea in M08-L03. It helps the learner complete tasks more safely and clearly.
9. Bold, italic, underline, and color used carefully - A key idea in M08-L03. It helps the learner complete tasks more safely and clearly.
10. Lists, Tables, and Pictures - Add structure and images to make a document more useful.
11. Bulleted and numbered lists - A key idea in M08-L04. It helps the learner complete tasks more safely and clearly.
12. Simple tables - A key idea in M08-L04. It helps the learner complete tasks more safely and clearly.
13. Page Layout, Headers, Footers, and Printing - Prepare a word document for paper or pdf output.
14. Margins and page size - A key idea in M08-L05. It helps the learner complete tasks more safely and clearly.
15. Header and footer - A key idea in M08-L05. It helps the learner complete tasks more safely and clearly.
16. Review, Comments, and Sharing with OneDrive - Use word with family, classmates, or staff by sharing and adding comments.
17. Comments and track changes in simple use - A key idea in M08-L06. It helps the learner complete tasks more safely and clearly.
18. Sharing from OneDrive - A key idea in M08-L06. It helps the learner complete tasks more safely and clearly.
19. Creating Useful Daily Documents - Make real documents that seniors can use in daily life.
20. Personal checklist - A key idea in M08-L07. It helps the learner complete tasks more safely and clearly.
21. Medication or appointment sheet - A key idea in M08-L07. It helps the learner complete tasks more safely and clearly.
22. Stop-check-click - Pause, check the screen, then click only when ready.

- 23. Practice file - A safe file used for learning instead of a real private file.
- 24. View-only sharing - Permission that lets someone see a file but not change it.
- 25. Preview - A final check screen before printing, sending, or exporting.
- 26. Clear file name - A name that includes topic and date so the file is easy to find later.
- 27. Ask for help - The correct action when money, password, identity, banking, or urgent warning appears.

Review Method

Use five cards per day. A senior learner should not try to memorize all cards in one sitting. Repetition over many days is better than one long study session.

M08 Cheat Sheet - Microsoft Word

Main Tools / Examples

Microsoft Word, Microsoft 365, OneDrive

Universal Senior-Friendly Routine

1. Say the task: "I am doing ____."
2. Check the app, account, file, folder, printer, or recipient.
3. Do one action at a time.
4. Preview or confirm the result.
5. Save, send, share, print, or close only after checking.

Lesson Quick Guide

M08-L01 Getting Started with Microsoft Word - Goal: Understand what word is and how to open, read, and create a document. -

Remember: Word as a document writing tool. - Daily example: creating a simple notice for a senior club meeting in Japan. ###

M08-L02 Typing, Editing, and Saving Documents - Goal: Type comfortably, fix mistakes, and save safely without losing work. -

Remember: Cursor movement, clicking, selecting, backspace, delete, undo, redo. - Daily example: writing a short thank-you letter in English with a Japanese address line. ###

M08-L03 Formatting Text and Paragraphs - Goal: Make documents easier to read by changing font, size, spacing, and alignment. - Remember:

Font family and size. - Daily example: formatting a printed instruction sheet for paying a bill at a convenience store. ###

M08-L04 Lists, Tables, and Pictures - Goal: Add structure and images to make a document

M09 Microsoft Excel

M09-L01 Getting Started with Excel Spreadsheets

Learning Objectives

By the end of this lesson, the learner can:

- Understand rows, columns, cells, sheets, and simple workbook saving. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Workbook, worksheet, row, column, cell, and cell address. Notice this idea on the screen and connect it to a real task.
- Typing text, numbers, and dates. Notice this idea on the screen and connect it to a real task.
- Selecting cells and ranges. Notice this idea on the screen and connect it to a real task.
- Saving to computer or OneDrive. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand rows, columns, cells, sheets, and simple workbook saving

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open Excel and create a blank workbook.
2. Click cell A1 and type "Item".
3. Type a short shopping list in column A.
4. Save as "Excel Practice 01".

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: making a simple monthly shopping list for groceries from Aeon or a local supermarket.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Excel and create a blank workbook.
2. Click cell A1 and type "Item".
3. Type a short shopping list in column A.
4. Save as "Excel Practice 01".
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand rows, columns, cells, sheets, and simple workbook saving.
2. Microsoft Excel, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. making a simple monthly shopping list for groceries from Aeon or a local supermarket.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Getting Started with Excel Spreadsheets: Understand rows, columns, cells, sheets, and simple workbook saving.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced getting started with excel spreadsheets. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09-L02 Entering Data and Simple Formulas

Learning Objectives

By the end of this lesson, the learner can:

- Use excel to calculate totals instead of doing arithmetic by hand. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Numbers versus text. Notice this idea on the screen and connect it to a real task.
- Formula begins with =. Notice this idea on the screen and connect it to a real task.
- Addition with +. Notice this idea on the screen and connect it to a real task.
- SUM function for totals. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use Excel to calculate totals instead of doing arithmetic by hand

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Type three expense numbers.
2. Click an empty cell.
3. Type a simple formula using =.
4. Use SUM to add a small range.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: adding weekly food expenses in yen using Excel.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Type three expense numbers.
2. Click an empty cell.
3. Type a simple formula using =.
4. Use SUM to add a small range.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To use Excel to calculate totals instead of doing arithmetic by hand.
2. Microsoft Excel, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. adding weekly food expenses in yen using Excel.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Entering Data and Simple Formulas: Use excel to calculate totals instead of doing arithmetic by hand.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced entering data and simple formulas. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09-L03 Formatting Tables and Sorting Data

Learning Objectives

By the end of this lesson, the learner can:

- Make a list readable and sort it by date, name, or amount. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Column width and row height. Notice this idea on the screen and connect it to a real task.
- Currency format for yen. Notice this idea on the screen and connect it to a real task.
- Table style used lightly. Notice this idea on the screen and connect it to a real task.
- Sort A to Z, oldest to newest, and smallest to largest. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to make a list readable and sort it by date, name, or amount

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create headings: Date, Item, Category, Amount.
2. Enter five rows of sample data.
3. Format amount as currency.
4. Sort by date.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: sorting clinic appointments or payment records by date.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create headings: Date, Item, Category, Amount.
2. Enter five rows of sample data.
3. Format amount as currency.
4. Sort by date.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To make a list readable and sort it by date, name, or amount.
2. Microsoft Excel, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. sorting clinic appointments or payment records by date.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Formatting Tables and Sorting Data: Make a list readable and sort it by date, name, or amount.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced formatting tables and sorting data. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09-L04 Household Budget with SUM and AVERAGE

Learning Objectives

By the end of this lesson, the learner can:

- Build a basic monthly budget and understand totals and averages. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Income and expense categories. Notice this idea on the screen and connect it to a real task.
- SUM for total expense. Notice this idea on the screen and connect it to a real task.
- AVERAGE for typical cost. Notice this idea on the screen and connect it to a real task.
- Why formulas reduce mistakes. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to build a basic monthly budget and understand totals and averages

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create categories such as Food, Transport, Phone, Health.
2. Enter weekly amounts.
3. Use SUM for the monthly total.
4. Use AVERAGE for weekly average.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: checking how much is spent on train travel, food, and mobile phone payments in one month.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create categories such as Food, Transport, Phone, Health.
2. Enter weekly amounts.
3. Use SUM for the monthly total.
4. Use AVERAGE for weekly average.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To build a basic monthly budget and understand totals and averages.
2. Microsoft Excel, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. checking how much is spent on train travel, food, and mobile phone payments in one month.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Household Budget with SUM and AVERAGE: Build a basic monthly budget and understand totals and averages.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced household budget with sum and average. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09-L05 Charts for Easy Understanding

Learning Objectives

By the end of this lesson, the learner can:

- Turn numbers into simple charts that are easier to see. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- When a chart helps. Notice this idea on the screen and connect it to a real task.
- Column charts for comparison. Notice this idea on the screen and connect it to a real task.
- Pie charts used carefully. Notice this idea on the screen and connect it to a real task.
- Chart title and labels. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to turn numbers into simple charts that are easier to see

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Select a small expense table.
2. Insert a column chart.
3. Add a clear title.
4. Move the chart so it does not cover data.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: creating a chart of monthly expenses to discuss with family.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Select a small expense table.
2. Insert a column chart.
3. Add a clear title.
4. Move the chart so it does not cover data.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To turn numbers into simple charts that are easier to see.
2. Microsoft Excel, Microsoft 365, OneDrive.

3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. creating a chart of monthly expenses to discuss with family.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Charts for Easy Understanding: Turn numbers into simple charts that are easier to see.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced charts for easy understanding. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09-L06 Practical Lists: Medicines, Travel, and Contacts

Learning Objectives

By the end of this lesson, the learner can:

- Use excel as a simple organized list for daily life. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Medication list columns. Notice this idea on the screen and connect it to a real task.
- Travel checklist columns. Notice this idea on the screen and connect it to a real task.
- Emergency contact list. Notice this idea on the screen and connect it to a real task.
- Filtering a table. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use Excel as a simple organized list for daily life

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create a medicine table with Name, Time, Amount, Notes.
2. Add at least five sample rows.
3. Turn the range into a table.
4. Filter by time of day.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: making a medicine schedule before visiting a doctor.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create a medicine table with Name, Time, Amount, Notes.
2. Add at least five sample rows.
3. Turn the range into a table.
4. Filter by time of day.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To use Excel as a simple organized list for daily life.

2. Microsoft Excel, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. making a medicine schedule before visiting a doctor.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Practical Lists: Use excel as a simple organized list for daily life.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced practical lists: medicines, travel, and contacts. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09-L07 Saving, Sharing, Printing, and Avoiding Errors

Learning Objectives

By the end of this lesson, the learner can:

- Protect excel files from loss and print the right area clearly. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Save often and keep one backup. Notice this idea on the screen and connect it to a real task.
- Share view-only when unsure. Notice this idea on the screen and connect it to a real task.
- Print area and page orientation. Notice this idea on the screen and connect it to a real task.
- Formula error signs such as #VALUE!. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to protect Excel files from loss and print the right area clearly
↓
Open the correct tool
↓
Do one small action
↓
Check the result
↓
Finish safely

Step-by-Step Instructions

1. Save a workbook to OneDrive.
2. Use Print Preview.
3. Set landscape orientation for wide tables.
4. Check formulas before sharing.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: sharing a household budget with a family member through OneDrive view-only link.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Save a workbook to OneDrive.
2. Use Print Preview.
3. Set landscape orientation for wide tables.
4. Check formulas before sharing.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To protect Excel files from loss and print the right area clearly.
2. Microsoft Excel, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. sharing a household budget with a family member through OneDrive view-only link.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Saving, Sharing, Printing, and Avoiding Errors: Protect excel files from loss and print the right area clearly.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced saving, sharing, printing, and avoiding errors. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M09 Module Review - Microsoft Excel

Module Purpose

The purpose of M09 Microsoft Excel is to help a senior learner use spreadsheets for lists, budgets, simple formulas, charts, and printed records. This module is written for senior beginners who may forget steps, worry about mistakes, or feel nervous when a screen changes. The module uses simple English and Japan-focused examples, including Microsoft Excel, Microsoft 365, OneDrive.

Lesson Numbering and Titles

- M09-L01 Getting Started with Excel Spreadsheets - Understand rows, columns, cells, sheets, and simple workbook saving.
- M09-L02 Entering Data and Simple Formulas - Use excel to calculate totals instead of doing arithmetic by hand.
- M09-L03 Formatting Tables and Sorting Data - Make a list readable and sort it by date, name, or amount.
- M09-L04 Household Budget with SUM and AVERAGE - Build a basic monthly budget and understand totals and averages.
- M09-L05 Charts for Easy Understanding - Turn numbers into simple charts that are easier to see.
- M09-L06 Practical Lists: Medicines, Travel, and Contacts - Use excel as a simple organized list for daily life.
- M09-L07 Saving, Sharing, Printing, and Avoiding Errors - Protect excel files from loss and print the right area clearly.

Big Ideas to Remember

1. One task at a time. Do not mix too many actions.
2. Check the place. Know which app, folder, account, file, or printer you are using.
3. Use clear names. A clear name is better than a

M09 Module Quiz - Microsoft Excel

1. In M09-L01, what is the main skill?
2. Give one real-life example for Getting Started with Excel Spreadsheets.
3. In M09-L02, what is the main skill?
4. Give one real-life example for Entering Data and Simple Formulas.
5. In M09-L03, what is the main skill?
6. Give one real-life example for Formatting Tables and Sorting Data.
7. In M09-L04, what is the main skill?
8. Give one real-life example for Household Budget with SUM and AVERAGE.
9. In M09-L05, what is the main skill?
10. Give one real-life example for Charts for Easy Understanding.
11. In M09-L06, what is the main skill?
12. Give one real-life example for Practical Lists: Medicines, Travel, and Contacts.
13. In M09-L07, what is the main skill?
14. Give one real-life example for Saving, Sharing, Printing, and Avoiding Errors.
15. Why should a senior learner use practice files first?
16. What should you check before sharing something?
17. What should you do before printing?
18. What should you do if an email or cloud link looks suspicious?
19. Why are clear titles and file names useful?
20. Which services are used as examples in this module?

M09 Practical Assessment - Microsoft Excel

Assessment Purpose

This practical assessment checks whether the learner can use Microsoft Excel skills in a calm and safe way. The assessment should use practice accounts and sample files only. Do not use real bank, payment, My Number Card, password, or medical information.

Tools and Examples

Suggested tools/examples: Microsoft Excel, Microsoft 365, OneDrive.

Performance Tasks

- Task 1: Complete a safe practice activity from M09-L01 Getting Started with Excel Spreadsheets. Expected result: the learner can understand rows, columns, cells, sheets, and simple workbook saving. - Task 2: Complete a safe practice activity from M09-L02 Entering Data and Simple Formulas. Expected result: the learner can use Excel to calculate totals instead of doing arithmetic by hand. - Task 3: Complete a safe practice activity from M09-L03 Formatting Tables and Sorting Data. Expected result: the learner can make a list readable and sort it by date, name, or amount. - Task 4: Complete a safe practice activity from M09-L04 Household Budget with SUM and AVERAGE. Expected result: the learner can build a basic monthly budget and understand totals and averages. - Task 5: Complete a safe practice activity from M09-L05 Charts for Easy Understanding. Expected result: the learner can turn numbers into simple charts that are easier to see. - Task 6: Complete a safe practice activity from M09-L06 Practical Lists: Medicines, Travel, and Contacts. Expected result: the learner can use Excel as a simple organized list for daily

M09 Module Flashcards - Microsoft Excel

Use these flashcards for quick review. Read the front first, then cover the back and try to explain it in your own words.

1. Getting Started with Excel Spreadsheets - Understand rows, columns, cells, sheets, and simple workbook saving.
2. Workbook, worksheet, row, column, cell, and cell address - A key idea in M09-L01. It helps the learner complete tasks more safely and clearly.
3. Typing text, numbers, and dates - A key idea in M09-L01. It helps the learner complete tasks more safely and clearly.
4. Entering Data and Simple Formulas - Use excel to calculate totals instead of doing arithmetic by hand.
5. Numbers versus text - A key idea in M09-L02. It helps the learner complete tasks more safely and clearly.
6. Formula begins with = - A key idea in M09-L02. It helps the learner complete tasks more safely and clearly.
7. Formatting Tables and Sorting Data - Make a list readable and sort it by date, name, or amount.
8. Column width and row height - A key idea in M09-L03. It helps the learner complete tasks more safely and clearly.
9. Currency format for yen - A key idea in M09-L03. It helps the learner complete tasks more safely and clearly.
10. Household Budget with SUM and AVERAGE - Build a basic monthly budget and understand totals and averages.
11. Income and expense categories - A key idea in M09-L04. It helps the learner complete tasks more safely and clearly.
12. SUM for total expense - A key idea in M09-L04. It helps the learner complete tasks more safely and clearly.
13. Charts for Easy Understanding - Turn numbers into simple charts that are easier to see.
14. When a chart helps - A key idea in M09-L05. It helps the learner complete tasks more safely and clearly.
15. Column charts for comparison - A key idea in M09-L05. It helps the learner complete tasks more safely and clearly.
16. Practical Lists: Medicines, Travel, and Contacts - Use excel as a simple organized list for daily life.
17. Medication list columns - A key idea in M09-L06. It helps the learner complete tasks more safely and clearly.
18. Travel checklist columns - A key idea in M09-L06. It helps the learner complete tasks more safely and clearly.
19. Saving, Sharing, Printing, and Avoiding Errors - Protect excel files from loss and print the right area clearly.
20. Save often and keep one backup - A key idea in M09-L07. It helps the learner complete tasks more safely and clearly.
21. Share view-only when unsure - A key idea in M09-L07. It helps the learner complete tasks more safely and clearly.

- 22. Stop-check-click - Pause, check the screen, then click only when ready.
- 23. Practice file - A safe file used for learning instead of a real private file.
- 24. View-only sharing - Permission that lets someone see a file but not change it.
- 25. Preview - A final check screen before printing, sending, or exporting.
- 26. Clear file name - A name that includes topic and date so the file is easy to find later.
- 27. Ask for help - The correct action when money, password, identity, banking, or urgent warning appears.

Review Method

Use five cards per day. A senior learner should not try to memorize all cards in one sitting. Repetition over many days is better than one long study session.

M09 Cheat Sheet - Microsoft Excel

Main Tools / Examples

Microsoft Excel, Microsoft 365, OneDrive

Universal Senior-Friendly Routine

1. Say the task: "I am doing ____."
2. Check the app, account, file, folder, printer, or recipient.
3. Do one action at a time.
4. Preview or confirm the result.
5. Save, send, share, print, or close only after checking.

Lesson Quick Guide

M09-L01 Getting Started with Excel Spreadsheets - Goal: Understand rows, columns, cells, sheets, and simple workbook saving. - **Remember:** Workbook, worksheet, row, column, cell, and cell address. - **Daily example:** making a simple monthly shopping list for groceries from Aeon or a local supermarket. ### **M09-L02 Entering Data and Simple Formulas - Goal:** Use excel to calculate totals instead of doing arithmetic by hand. - **Remember:** Numbers versus text. - **Daily example:** adding weekly food expenses in yen using Excel. ### **M09-L03 Formatting Tables and Sorting Data - Goal:** Make a list readable and sort it by date, name, or amount. - **Remember:** Column width and row height. - **Daily example:** sorting clinic appointments or payment records by date. ### **M09-L04 Household Budget with SUM and AVERAGE - Goal:** Build a basic monthly budget and understand totals and averages. - **Remember:** Income and expense categories.

M10 Microsoft PowerPoint

M10-L01 Getting Started with PowerPoint

Learning Objectives

By the end of this lesson, the learner can:

- Understand slides, layouts, title slides, and presentation files. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- PowerPoint as a slide tool. Notice this idea on the screen and connect it to a real task.
- Slide thumbnails and main slide area. Notice this idea on the screen and connect it to a real task.
- Title slide, content slide, and closing slide. Notice this idea on the screen and connect it to a real task.
- Saving a presentation. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand slides, layouts, title slides, and presentation files

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open PowerPoint.
2. Choose Blank Presentation.
3. Add a title slide.
4. Save as "PowerPoint Practice 01".

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: making a simple self-introduction slide deck for a community class.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open PowerPoint.
2. Choose Blank Presentation.
3. Add a title slide.
4. Save as "PowerPoint Practice 01".
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand slides, layouts, title slides, and presentation files.
2. Microsoft PowerPoint, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. making a simple self-introduction slide deck for a community class.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Getting Started with PowerPoint: Understand slides, layouts, title slides, and presentation files.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced getting started with powerpoint. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10-L02 Creating Slides with Clear Text

Learning Objectives

By the end of this lesson, the learner can:

- Write short slide text that people can read easily. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- One idea per slide. Notice this idea on the screen and connect it to a real task.
- Large readable text. Notice this idea on the screen and connect it to a real task.
- Bullets, not long paragraphs. Notice this idea on the screen and connect it to a real task.
- Simple slide titles. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to write short slide text that people can read easily

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create three slides.
2. Add one clear title to each slide.
3. Use three short bullet points per slide.
4. Read the slide from far away to test readability.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: explaining how to use Gmail in three simple slides for a friend.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create three slides.
2. Add one clear title to each slide.
3. Use three short bullet points per slide.
4. Read the slide from far away to test readability.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To write short slide text that people can read easily.
2. Microsoft PowerPoint, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.

4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. explaining how to use Gmail in three simple slides for a friend.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Creating Slides with Clear Text: Write short slide text that people can read easily.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced creating slides with clear text. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10-L03 Pictures, Icons, and Slide Layouts

Learning Objectives

By the end of this lesson, the learner can:

- Add visuals without making slides crowded. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such as making

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Insert pictures from computer. Notice this idea on the screen and connect it to a real task.
- Use icons or shapes simply. Notice this idea on the screen and connect it to a real task.
- Picture size and position. Notice this idea on the screen and connect it to a real task.
- Layout choices: title and content, two content, blank. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to add visuals without making slides crowded

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Insert one photo.
2. Resize from the corner.
3. Add a caption.
4. Use alignment guides to keep it neat.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: making a travel memory slide with one photo from Kyoto and a short caption.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Insert one photo.
2. Resize from the corner.
3. Add a caption.
4. Use alignment guides to keep it neat.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To add visuals without making slides crowded.
2. Microsoft PowerPoint, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. making a travel memory slide with one photo from Kyoto and a short caption.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Pictures, Icons, and Slide Layouts: Add visuals without making slides crowded.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced pictures, icons, and slide layouts. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10-L04 Design, Themes, Fonts, and Colors

Learning Objectives

By the end of this lesson, the learner can:

- Choose a clean design that is easy for seniors to read. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Theme selection. Notice this idea on the screen and connect it to a real task.
- Font size and contrast. Notice this idea on the screen and connect it to a real task.
- Avoid too many colors. Notice this idea on the screen and connect it to a real task.
- Consistent layout. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to choose a clean design that is easy for seniors to read

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Choose one simple theme.
2. Use the same title size on all slides.
3. Use dark text on light background or light text on dark background.
4. Remove decoration that makes reading hard.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: designing a health information slide deck with calm colors and large text.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Choose one simple theme.
2. Use the same title size on all slides.
3. Use dark text on light background or light text on dark background.
4. Remove decoration that makes reading hard.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To choose a clean design that is easy for seniors to read.

2. Microsoft PowerPoint, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. designing a health information slide deck with calm colors and large text.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Design, Themes, Fonts, and Colors: Choose a clean design that is easy for seniors to read.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced design, themes, fonts, and colors. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10-L05 Speaker Notes and Presenting

Learning Objectives

By the end of this lesson, the learner can:

- Present with confidence using notes, practice, and simple controls. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Slide Show mode. Notice this idea on the screen and connect it to a real task.
- Next and previous slide. Notice this idea on the screen and connect it to a real task.
- Speaker notes. Notice this idea on the screen and connect it to a real task.
- Practice timing without rushing. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to present with confidence using notes, practice, and simple controls

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Add speaker notes to one slide.
2. Start Slide Show from the beginning.
3. Move forward and backward.
4. Practice speaking for one minute.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: giving a short talk about safe email habits at a senior center.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Add speaker notes to one slide.
2. Start Slide Show from the beginning.
3. Move forward and backward.
4. Practice speaking for one minute.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To present with confidence using notes, practice, and simple controls.
2. Microsoft PowerPoint, Microsoft 365, OneDrive.

3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. giving a short talk about safe email habits at a senior center.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Speaker Notes and Presenting: Present with confidence using notes, practice, and simple controls.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced speaker notes and presenting. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10-L06 Sharing, Exporting to PDF, and Printing Handouts

Learning Objectives

By the end of this lesson, the learner can:

- Share presentations in safe and useful formats. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such as

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- PowerPoint file versus PDF. Notice this idea on the screen and connect it to a real task.
- OneDrive sharing. Notice this idea on the screen and connect it to a real task.
- Print handouts with multiple slides per page. Notice this idea on the screen and connect it to a real task.
- Checking file size before emailing. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to share presentations in safe and useful formats

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Export a presentation to PDF.
2. Open Print Preview.
3. Choose handout layout.
4. Save a copy to OneDrive.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: sending a PDF version of slides to a family member who does not have PowerPoint.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Export a presentation to PDF.
2. Open Print Preview.
3. Choose handout layout.
4. Save a copy to OneDrive.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To share presentations in safe and useful formats.
2. Microsoft PowerPoint, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. sending a PDF version of slides to a family member who does not have PowerPoint.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Sharing, Exporting to PDF, and Printing Handouts: Share presentations in safe and useful formats.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced sharing, exporting to pdf, and printing handouts. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10-L07 Creating a Complete Senior-Friendly Presentation

Learning Objectives

By the end of this lesson, the learner can:

- Combine text, pictures, notes, and sharing into one project. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Planning before making slides. Notice this idea on the screen and connect it to a real task.
- Beginning, middle, and end. Notice this idea on the screen and connect it to a real task.
- Using pictures with purpose. Notice this idea on the screen and connect it to a real task.
- Final checking list. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to combine text, pictures, notes, and sharing into one project

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Plan five slides on paper first.
2. Create the slides in PowerPoint.
3. Add speaker notes.
4. Export to PDF and check it.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: creating a five-slide presentation called “My Favorite Places in Japan”.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Plan five slides on paper first.
2. Create the slides in PowerPoint.
3. Add speaker notes.
4. Export to PDF and check it.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: “I check first, then I click.”

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To combine text, pictures, notes, and sharing into one project.
2. Microsoft PowerPoint, Microsoft 365, OneDrive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. creating a five-slide presentation called “My Favorite Places in Japan”.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Creating a Complete Senior-Friendly Presentation: Combine text, pictures, notes, and sharing into one project.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced creating a complete senior-friendly presentation. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M10 Module Review - Microsoft PowerPoint

Module Purpose

The purpose of M10 Microsoft PowerPoint is to help a senior learner create clear slides for family, community, school, or club presentations. This module is written for senior beginners who may forget steps, worry about mistakes, or feel nervous when a screen changes. The module uses simple English and Japan-focused examples, including Microsoft PowerPoint, Microsoft 365, OneDrive.

Lesson Numbering and Titles

- M10-L01 Getting Started with PowerPoint - Understand slides, layouts, title slides, and presentation files.
- M10-L02 Creating Slides with Clear Text - Write short slide text that people can read easily.
- M10-L03 Pictures, Icons, and Slide Layouts - Add visuals without making slides crowded.
- M10-L04 Design, Themes, Fonts, and Colors - Choose a clean design that is easy for seniors to read.
- M10-L05 Speaker Notes and Presenting - Present with confidence using notes, practice, and simple controls.
- M10-L06 Sharing, Exporting to PDF, and Printing Handouts - Share presentations in safe and useful formats.
- M10-L07 Creating a Complete Senior-Friendly Presentation - Combine text, pictures, notes, and sharing into one project.

Big Ideas to Remember

1. One task at a time. Do not mix too many actions.
2. Check the place. Know which app, folder, account, file, or printer you are using.
3. Use clear names. A clear name is better than a clever name.
4. Preview before final action. Preview before printing, sending, exporting, or sharing.
5. Safety first.

M10 Module Quiz - Microsoft PowerPoint

1. In M10-L01, what is the main skill?
2. Give one real-life example for Getting Started with PowerPoint.
3. In M10-L02, what is the main skill?
4. Give one real-life example for Creating Slides with Clear Text.
5. In M10-L03, what is the main skill?
6. Give one real-life example for Pictures, Icons, and Slide Layouts.
7. In M10-L04, what is the main skill?
8. Give one real-life example for Design, Themes, Fonts, and Colors.
9. In M10-L05, what is the main skill?
10. Give one real-life example for Speaker Notes and Presenting.
11. In M10-L06, what is the main skill?
12. Give one real-life example for Sharing, Exporting to PDF, and Printing Handouts.
13. In M10-L07, what is the main skill?
14. Give one real-life example for Creating a Complete Senior-Friendly Presentation.
15. Why should a senior learner use practice files first?
16. What should you check before sharing something?
17. What should you do before printing?
18. What should you do if an email or cloud link looks suspicious?
19. Why are clear titles and file names useful?
20. Which services are used as examples in this module?

M10 Practical Assessment - Microsoft PowerPoint

Assessment Purpose

This practical assessment checks whether the learner can use Microsoft PowerPoint skills in a calm and safe way. The assessment should use practice accounts and sample files only. Do not use real bank, payment, My Number Card, password, or medical information.

Tools and Examples

Suggested tools/examples: Microsoft PowerPoint, Microsoft 365, OneDrive.

Performance Tasks

- Task 1: Complete a safe practice activity from M10-L01 Getting Started with PowerPoint. Expected result: the learner can understand slides, layouts, title slides, and presentation files.
- Task 2: Complete a safe practice activity from M10-L02 Creating Slides with Clear Text. Expected result: the learner can write short slide text that people can read easily.
- Task 3: Complete a safe practice activity from M10-L03 Pictures, Icons, and Slide Layouts. Expected result: the learner can add visuals without making slides crowded.
- Task 4: Complete a safe practice activity from M10-L04 Design, Themes, Fonts, and Colors. Expected result: the learner can choose a clean design that is easy for seniors to read.
- Task 5: Complete a safe practice activity from M10-L05 Speaker Notes and Presenting. Expected result: the learner can present with confidence using notes, practice, and simple controls.
- Task 6: Complete a safe practice activity from M10-L06 Sharing, Exporting to PDF, and Printing Handouts. Expected result: the learner can share presentations in safe and useful formats.
- Task 7: Complete a safe practice activity from **M10-L07 Creating a

M10 Module Flashcards - Microsoft PowerPoint

Use these flashcards for quick review. Read the front first, then cover the back and try to explain it in your own words.

1. Getting Started with PowerPoint - Understand slides, layouts, title slides, and presentation files.
2. PowerPoint as a slide tool - A key idea in M10-L01. It helps the learner complete tasks more safely and clearly.
3. Slide thumbnails and main slide area - A key idea in M10-L01. It helps the learner complete tasks more safely and clearly.
4. Creating Slides with Clear Text - Write short slide text that people can read easily.
5. One idea per slide - A key idea in M10-L02. It helps the learner complete tasks more safely and clearly.
6. Large readable text - A key idea in M10-L02. It helps the learner complete tasks more safely and clearly.
7. Pictures, Icons, and Slide Layouts - Add visuals without making slides crowded.
8. Insert pictures from computer - A key idea in M10-L03. It helps the learner complete tasks more safely and clearly.
9. Use icons or shapes simply - A key idea in M10-L03. It helps the learner complete tasks more safely and clearly.
10. Design, Themes, Fonts, and Colors - Choose a clean design that is easy for seniors to read.
11. Theme selection - A key idea in M10-L04. It helps the learner complete tasks more safely and clearly.
12. Font size and contrast - A key idea in M10-L04. It helps the learner complete tasks more safely and clearly.
13. Speaker Notes and Presenting - Present with confidence using notes, practice, and simple controls.
14. Slide Show mode - A key idea in M10-L05. It helps the learner complete tasks more safely and clearly.
15. Next and previous slide - A key idea in M10-L05. It helps the learner complete tasks more safely and clearly.
16. Sharing, Exporting to PDF, and Printing Handouts - Share presentations in safe and useful formats.
17. PowerPoint file versus PDF - A key idea in M10-L06. It helps the learner complete tasks more safely and clearly.
18. OneDrive sharing - A key idea in M10-L06. It helps the learner complete tasks more safely and clearly.
19. Creating a Complete Senior-Friendly Presentation - Combine text, pictures, notes, and sharing into one project.
20. Planning before making slides - A key idea in M10-L07. It helps the learner complete tasks more safely and clearly.
21. Beginning, middle, and end - A key idea in M10-L07. It helps the learner complete tasks more safely and clearly.
22. Stop-check-click - Pause, check the screen, then click only when ready.
23. Practice file - A safe file used for learning instead of a real private file.

- 24. View-only sharing - Permission that lets someone see a file but not change it.
- 25. Preview - A final check screen before printing, sending, or exporting.
- 26. Clear file name - A name that includes topic and date so the file is easy to find later.
- 27. Ask for help - The correct action when money, password, identity, banking, or urgent warning appears.

Review Method

Use five cards per day. A senior learner should not try to memorize all cards in one sitting. Repetition over many days is better than one long study session.

M10 Cheat Sheet - Microsoft PowerPoint

Main Tools / Examples

Microsoft PowerPoint, Microsoft 365, OneDrive

Universal Senior-Friendly Routine

1. Say the task: "I am doing ____."
2. Check the app, account, file, folder, printer, or recipient.
3. Do one action at a time.
4. Preview or confirm the result.
5. Save, send, share, print, or close only after checking.

Lesson Quick Guide

M10-L01 Getting Started with PowerPoint - Goal: Understand slides, layouts, title slides, and presentation files. - Remember: PowerPoint as a slide tool. - Daily example: making a simple self-introduction slide deck for a community class. ### M10-L02 Creating Slides with Clear Text - Goal: Write short slide text that people can read easily. - Remember: One idea per slide. - Daily example: explaining how to use Gmail in three simple slides for a friend. ### M10-L03 Pictures, Icons, and Slide Layouts - Goal: Add visuals without making slides crowded. - Remember: Insert pictures from computer. - Daily example: making a travel memory slide with one photo from Kyoto and a short caption. ### M10-L04 Design, Themes, Fonts, and Colors - Goal: Choose a clean design that is easy for seniors to read. - Remember: Theme selection. - Daily example: designing a health information slide deck

M11 Cloud Storage

M11-L01 What Cloud Storage Means

Learning Objectives

By the end of this lesson, the learner can:

- Understand cloud storage and how it differs from files only on one computer. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Cloud storage as a secure online file cabinet. Notice this idea on the screen and connect it to a real task.
- Internet account and password. Notice this idea on the screen and connect it to a real task.
- Local file versus cloud file. Notice this idea on the screen and connect it to a real task.
- Benefits and limits of cloud storage. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand cloud storage and how it differs from files only on one computer

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Look at a file saved on the computer.
2. Open OneDrive or Google Drive in a browser.
3. Notice files can appear online.
4. Explain in one sentence why cloud storage helps when a computer breaks.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: saving a Word document in OneDrive so it can be opened from another computer.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Look at a file saved on the computer.
2. Open OneDrive or Google Drive in a browser.
3. Notice files can appear online.
4. Explain in one sentence why cloud storage helps when a computer breaks.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand cloud storage and how it differs from files only on one computer.
2. OneDrive, Google Drive, Microsoft 365, Gmail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. saving a Word document in OneDrive so it can be opened from another computer.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- What Cloud Storage Means: Understand cloud storage and how it differs from files only on one computer.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced what cloud storage means. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11-L02 OneDrive Basics with Microsoft 365

Learning Objectives

By the end of this lesson, the learner can:

- Use onedrive to save microsoft office files and keep them organized. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- OneDrive home, My files, Recent, Shared, Recycle bin. Notice this idea on the screen and connect it to a real task.
- Autosave in Word, Excel, PowerPoint. Notice this idea on the screen and connect it to a real task.
- Folders and file names. Notice this idea on the screen and connect it to a real task.
- Opening OneDrive from Windows or browser. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use OneDrive to save Microsoft Office files and keep them organized

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open OneDrive.
2. Create a folder named "Practice Documents".
3. Upload or create one Word file.
4. Rename the file with a clear date.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: saving a Microsoft Word letter to OneDrive and finding it later from Recent.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open OneDrive.
2. Create a folder named "Practice Documents".
3. Upload or create one Word file.
4. Rename the file with a clear date.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots.
- Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu.
- Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help.
- Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To use OneDrive to save Microsoft Office files and keep them organized.
2. OneDrive, Google Drive, Microsoft 365, Gmail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. saving a Microsoft Word letter to OneDrive and finding it later from Recent.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- OneDrive Basics with Microsoft 365: Use onedrive to save microsoft office files and keep them organized.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced onedrive basics with microsoft 365. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11-L03 Google Drive Basics with Gmail

Learning Objectives

By the end of this lesson, the learner can:

- Use google drive for uploaded files, folders, and simple sharing. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Google Drive home, My Drive, Shared with me, Recent, Trash. Notice this idea on the screen and connect it to a real task.
- Upload files and folders. Notice this idea on the screen and connect it to a real task.
- Google account connection to Gmail. Notice this idea on the screen and connect it to a real task.
- Previewing files without downloading. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use Google Drive for uploaded files, folders, and simple sharing

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open Google Drive.
2. Create a folder named “Family Photos Practice”.
3. Upload one safe practice file.
4. Use search to find it by name.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: storing a scanned PDF in Google Drive and attaching it later in Gmail.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Google Drive.
2. Create a folder named “Family Photos Practice”.
3. Upload one safe practice file.
4. Use search to find it by name.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: “I check first, then I click.”

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To use Google Drive for uploaded files, folders, and simple sharing.
2. OneDrive, Google Drive, Microsoft 365, Gmail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. storing a scanned PDF in Google Drive and attaching it later in Gmail.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Google Drive Basics with Gmail: Use google drive for uploaded files, folders, and simple sharing.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced google drive basics with gmail. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11-L04 Upload, Download, Rename, Move, and Delete Files

Learning Objectives

By the end of this lesson, the learner can:

- Manage files in cloud storage without losing them. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Upload from computer. Notice this idea on the screen and connect it to a real task.
- Download to computer. Notice this idea on the screen and connect it to a real task.
- Rename and move. Notice this idea on the screen and connect it to a real task.
- Trash and restore. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to manage files in cloud storage without losing them

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Upload one test document.
2. Rename it with your initials and date.
3. Move it into a practice folder.
4. Delete it and restore it from trash.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: cleaning up old travel files after a trip to Osaka.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Upload one test document.
2. Rename it with your initials and date.
3. Move it into a practice folder.
4. Delete it and restore it from trash.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To manage files in cloud storage without losing them.
2. OneDrive, Google Drive, Microsoft 365, Gmail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. cleaning up old travel files after a trip to Osaka.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Upload, Download, Rename, Move, and Delete Files: Manage files in cloud storage without losing them.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced upload, download, rename, move, and delete files. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11-L05 Sharing Files and Folders Safely

Learning Objectives

By the end of this lesson, the learner can:

- Share only the right files with the right people. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- View-only versus edit permission. Notice this idea on the screen and connect it to a real task.
- Specific person sharing versus link sharing. Notice this idea on the screen and connect it to a real task.
- Expiration and removing access when available. Notice this idea on the screen and connect it to a real task.
- Why public links can be risky. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to share only the right files with the right people

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Choose a practice file.
2. Open the Share menu.
3. Select view-only permission.
4. Cancel before sending if this is classroom practice.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: sharing a PDF document with a family member while preventing accidental editing.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Choose a practice file.
2. Open the Share menu.
3. Select view-only permission.
4. Cancel before sending if this is classroom practice.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.

- Keep practice separate from real private documents.

Quiz Answers

1. To share only the right files with the right people.
2. OneDrive, Google Drive, Microsoft 365, Gmail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. sharing a PDF document with a family member while preventing accidental editing.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Sharing Files and Folders Safely: Share only the right files with the right people.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced sharing files and folders safely. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11-L06 Sync, Backup, Phone Photos, and Recovery

Learning Objectives

By the end of this lesson, the learner can:

- Understand automatic syncing and protect important files. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such as

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Sync folder on Windows. Notice this idea on the screen and connect it to a real task.
- Phone photo backup choices. Notice this idea on the screen and connect it to a real task.
- Version history and recycle bin. Notice this idea on the screen and connect it to a real task.
- What cloud backup can and cannot protect. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand automatic syncing and protect important files

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Find the OneDrive or Google Drive sync folder.
2. Check whether a file has a cloud status icon.
3. Look at recycle bin/trash.
4. Restore a deleted test file.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: recovering a deleted Excel budget from OneDrive recycle bin.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Find the OneDrive or Google Drive sync folder.
2. Check whether a file has a cloud status icon.
3. Look at recycle bin/trash.
4. Restore a deleted test file.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand automatic syncing and protect important files.

2. OneDrive, Google Drive, Microsoft 365, Gmail.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. recovering a deleted Excel budget from OneDrive recycle bin.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Sync, Backup, Phone Photos, and Recovery: Understand automatic syncing and protect important files.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced sync, backup, phone photos, and recovery. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11-L07 Daily Cloud Storage Workflow

Learning Objectives

By the end of this lesson, the learner can:

- Combine cloud storage with email, office, phone, and printing tasks. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Save Office documents to cloud. Notice this idea on the screen and connect it to a real task.
- Attach cloud files to email. Notice this idea on the screen and connect it to a real task.
- Scan to cloud. Notice this idea on the screen and connect it to a real task.
- Organize by year and topic. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to combine cloud storage with email, Office, phone, and printing tasks

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Create folders named 2026-Documents, 2026-Photos, and 2026-Receipts.
2. Upload one document into the correct folder.
3. Create a view-only sharing link.
4. Write a note explaining where the file is stored.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: saving a scanned city office form in Google Drive and emailing it from Gmail.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Create folders named 2026-Documents, 2026-Photos, and 2026-Receipts.
2. Upload one document into the correct folder.
3. Create a view-only sharing link.
4. Write a note explaining where the file is stored.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To combine cloud storage with email, Office, phone, and printing tasks.
2. OneDrive, Google Drive, Microsoft 365, Gmail.

3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. saving a scanned city office form in Google Drive and emailing it from Gmail.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Daily Cloud Storage Workflow: Combine cloud storage with email, office, phone, and printing tasks.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced daily cloud storage workflow. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M11 Module Review - Cloud Storage

Module Purpose

The purpose of M11 Cloud Storage is to help a senior learner store, find, share, sync, and recover files using common cloud services. This module is written for senior beginners who may forget steps, worry about mistakes, or feel nervous when a screen changes. The module uses simple English and Japan-focused examples, including OneDrive, Google Drive, Microsoft 365, Gmail.

Lesson Numbering and Titles

- M11-L01 What Cloud Storage Means - Understand cloud storage and how it differs from files only on one computer.
- M11-L02 OneDrive Basics with Microsoft 365 - Use onedrive to save microsoft office files and keep them organized.
- M11-L03 Google Drive Basics with Gmail - Use google drive for uploaded files, folders, and simple sharing.
- M11-L04 Upload, Download, Rename, Move, and Delete Files - Manage files in cloud storage without losing them.
- M11-L05 Sharing Files and Folders Safely - Share only the right files with the right people.
- M11-L06 Sync, Backup, Phone Photos, and Recovery - Understand automatic syncing and protect important files.
- M11-L07 Daily Cloud Storage Workflow - Combine cloud storage with email, office, phone, and printing tasks.

Big Ideas to Remember

1. One task at a time. Do not mix too many actions.
2. Check the place. Know which app, folder, account, file, or printer you are using.
3. Use clear names. A clear name is better than a clever name.
4. **Preview before

M11 Module Quiz - Cloud Storage

1. In M11-L01, what is the main skill?
2. Give one real-life example for What Cloud Storage Means.
3. In M11-L02, what is the main skill?
4. Give one real-life example for OneDrive Basics with Microsoft 365.
5. In M11-L03, what is the main skill?
6. Give one real-life example for Google Drive Basics with Gmail.
7. In M11-L04, what is the main skill?
8. Give one real-life example for Upload, Download, Rename, Move, and Delete Files.
9. In M11-L05, what is the main skill?
10. Give one real-life example for Sharing Files and Folders Safely.
11. In M11-L06, what is the main skill?
12. Give one real-life example for Sync, Backup, Phone Photos, and Recovery.
13. In M11-L07, what is the main skill?
14. Give one real-life example for Daily Cloud Storage Workflow.
15. Why should a senior learner use practice files first?
16. What should you check before sharing something?
17. What should you do before printing?
18. What should you do if an email or cloud link looks suspicious?
19. Why are clear titles and file names useful?
20. Which services are used as examples in this module?

M11 Practical Assessment - Cloud Storage

Assessment Purpose

This practical assessment checks whether the learner can use Cloud Storage skills in a calm and safe way. The assessment should use practice accounts and sample files only. Do not use real bank, payment, My Number Card, password, or medical information.

Tools and Examples

Suggested tools/examples: OneDrive, Google Drive, Microsoft 365, Gmail.

Performance Tasks

- Task 1: Complete a safe practice activity from M11-L01 What Cloud Storage Means. Expected result: the learner can understand cloud storage and how it differs from files only on one computer. - Task 2: Complete a safe practice activity from M11-L02 OneDrive Basics with Microsoft 365. Expected result: the learner can use OneDrive to save Microsoft Office files and keep them organized. - Task 3: Complete a safe practice activity from M11-L03 Google Drive Basics with Gmail. Expected result: the learner can use Google Drive for uploaded files, folders, and simple sharing. - Task 4: Complete a safe practice activity from M11-L04 Upload, Download, Rename, Move, and Delete Files. Expected result: the learner can manage files in cloud storage without losing them. - Task 5: Complete a safe practice activity from M11-L05 Sharing Files and Folders Safely. Expected result: the learner can share only the right files with the right people. - Task 6: Complete a safe practice activity from M11-L06 Sync, Backup, Phone Photos, and Recovery. Expected result: the learner can understand automatic syncing and protect important files. -

M11 Module Flashcards - Cloud Storage

Use these flashcards for quick review. Read the front first, then cover the back and try to explain it in your own words.

1. What Cloud Storage Means - Understand cloud storage and how it differs from files only on one computer.
2. Cloud storage as a secure online file cabinet - A key idea in M11-L01. It helps the learner complete tasks more safely and clearly.
3. Internet account and password - A key idea in M11-L01. It helps the learner complete tasks more safely and clearly.
4. OneDrive Basics with Microsoft 365 - Use onedrive to save microsoft office files and keep them organized.
5. OneDrive home, My files, Recent, Shared, Recycle bin - A key idea in M11-L02. It helps the learner complete tasks more safely and clearly.
6. Autosave in Word, Excel, PowerPoint - A key idea in M11-L02. It helps the learner complete tasks more safely and clearly.
7. Google Drive Basics with Gmail - Use google drive for uploaded files, folders, and simple sharing.
8. Google Drive home, My Drive, Shared with me, Recent, Trash - A key idea in M11-L03. It helps the learner complete tasks more safely and clearly.
9. Upload files and folders - A key idea in M11-L03. It helps the learner complete tasks more safely and clearly.
10. Upload, Download, Rename, Move, and Delete Files - Manage files in cloud storage without losing them.
11. Upload from computer - A key idea in M11-L04. It helps the learner complete tasks more safely and clearly.
12. Download to computer - A key idea in M11-L04. It helps the learner complete tasks more safely and clearly.
13. Sharing Files and Folders Safely - Share only the right files with the right people.
14. View-only versus edit permission - A key idea in M11-L05. It helps the learner complete tasks more safely and clearly.
15. Specific person sharing versus link sharing - A key idea in M11-L05. It helps the learner complete tasks more safely and clearly.
16. Sync, Backup, Phone Photos, and Recovery - Understand automatic syncing and protect important files.
17. Sync folder on Windows - A key idea in M11-L06. It helps the learner complete tasks more safely and clearly.
18. Phone photo backup choices - A key idea in M11-L06. It helps the learner complete tasks more safely and clearly.
19. Daily Cloud Storage Workflow - Combine cloud storage with email, office, phone, and printing tasks.
20. Save Office documents to cloud - A key idea in M11-L07. It helps the learner complete tasks more safely and clearly.
21. Attach cloud files to email - A key idea in M11-L07. It helps the learner complete tasks more safely and clearly.
22. Stop-check-click - Pause, check the screen, then click only when ready.
23. Practice file - A safe file used for learning instead of a real private file.

- 24. View-only sharing - Permission that lets someone see a file but not change it.
- 25. Preview - A final check screen before printing, sending, or exporting.
- 26. Clear file name - A name that includes topic and date so the file is easy to find later.
- 27. Ask for help - The correct action when money, password, identity, banking, or urgent warning appears.

Review Method

Use five cards per day. A senior learner should not try to memorize all cards in one sitting. Repetition over many days is better than one long study session.

M11 Cheat Sheet - Cloud Storage

Main Tools / Examples

OneDrive, Google Drive, Microsoft 365, Gmail

Universal Senior-Friendly Routine

1. Say the task: "I am doing ____."
2. Check the app, account, file, folder, printer, or recipient.
3. Do one action at a time.
4. Preview or confirm the result.
5. Save, send, share, print, or close only after checking.

Lesson Quick Guide

M11-L01 What Cloud Storage Means - Goal: Understand cloud storage and how it differs from files only on one computer. - Remember: Cloud storage as a secure online file cabinet. - Daily example: saving a Word document in OneDrive so it can be opened from another computer. ###

M11-L02 OneDrive Basics with Microsoft 365 - Goal: Use onedrive to save microsoft office files and keep them organized. - Remember: OneDrive home, My files, Recent, Shared, Recycle bin. - Daily example: saving a Microsoft Word letter to OneDrive and finding it later from Recent. ###

M11-L03 Google Drive Basics with Gmail - Goal: Use google drive for uploaded files, folders, and simple sharing. - Remember: Google Drive home, My Drive, Shared with me, Recent, Trash. - Daily example: storing a scanned PDF in Google Drive and attaching it later in Gmail. ###

M11-L04 Upload, Download,

M12 Printing & Scanning

M12-L01 Printer and Scanner Basics

Learning Objectives

By the end of this lesson, the learner can:

- Understand printer types, scanner types, paper, ink, and pdf/jpeg output. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Printer, scanner, all-in-one device. Notice this idea on the screen and connect it to a real task.
- Inkjet, laser, and photo printing in simple terms. Notice this idea on the screen and connect it to a real task.
- A4 paper, envelopes, and photo paper. Notice this idea on the screen and connect it to a real task.
- Scan output: PDF for documents and JPEG for photos. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand printer types, scanner types, paper, ink, and PDF/JPEG output

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Look at the printer and find power, paper tray, and output tray.
2. Check the paper size.
3. Open the scanner lid or feeder carefully.
4. Decide whether the result should be PDF or JPEG.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: printing a Word document on A4 paper and scanning a clinic form as PDF.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Look at the printer and find power, paper tray, and output tray.
2. Check the paper size.
3. Open the scanner lid or feeder carefully.
4. Decide whether the result should be PDF or JPEG.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand printer types, scanner types, paper, ink, and PDF/JPEG output.

2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Before sharing, check the recipient, permission, and file name.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. printing a Word document on A4 paper and scanning a clinic form as PDF.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Printer and Scanner Basics: Understand printer types, scanner types, paper, ink, and pdf/jpeg output.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced printer and scanner basics. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12-L02 Printing from Windows, Word, Excel, and PDF

Learning Objectives

By the end of this lesson, the learner can:

- Print from common apps while checking preview first. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Print command and keyboard shortcut. Notice this idea on the screen and connect it to a real task.
- Printer selection. Notice this idea on the screen and connect it to a real task.
- Print Preview. Notice this idea on the screen and connect it to a real task.
- Page range and number of copies. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to print from common apps while checking preview first
↓
Open the correct tool
↓
Do one small action
↓
Check the result
↓
Finish safely

Step-by-Step Instructions

1. Open a practice Word or PDF file.
2. Choose Print.
3. Check the selected printer.
4. Use Print Preview and print only one copy.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: printing a one-page appointment reminder from Outlook or Gmail.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open a practice Word or PDF file.
2. Choose Print.
3. Check the selected printer.
4. Use Print Preview and print only one copy.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To print from common apps while checking preview first.
2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. printing a one-page appointment reminder from Outlook or Gmail.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Printing from Windows, Word, Excel, and PDF: Print from common apps while checking preview first.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced printing from windows, word, excel, and pdf. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12-L03 Important Print Settings

Learning Objectives

By the end of this lesson, the learner can:

- Use paper size, orientation, color, black-and-white, and double-sided settings. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- A4 versus letter size. Notice this idea on the screen and connect it to a real task.
- Portrait versus landscape. Notice this idea on the screen and connect it to a real task.
- Color versus black-and-white. Notice this idea on the screen and connect it to a real task.
- Single-sided versus double-sided. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to use paper size, orientation, color, black-and-white, and double-sided settings

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Open Print settings.
2. Choose A4.
3. Choose portrait or landscape based on the document.
4. Choose black-and-white for a practice document to save ink.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: printing an Excel budget in landscape mode so all columns fit.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Open Print settings.
2. Choose A4.
3. Choose portrait or landscape based on the document.
4. Choose black-and-white for a practice document to save ink.
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To use paper size, orientation, color, black-and-white, and double-sided settings.
2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.

3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. printing an Excel budget in landscape mode so all columns fit.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Important Print Settings: Use paper size, orientation, color, black-and-white, and double-sided settings.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced important print settings. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12-L04 Scanning Documents to PDF or JPEG

Learning Objectives

By the end of this lesson, the learner can:

- Scan paper documents and save them with clear names. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Flatbed scanner and document feeder. Notice this idea on the screen and connect it to a real task.
- Resolution in simple terms. Notice this idea on the screen and connect it to a real task.
- PDF for forms, JPEG for photos. Notice this idea on the screen and connect it to a real task.
- File naming after scanning. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to scan paper documents and save them with clear names
↓
Open the correct tool
↓
Do one small action
↓
Check the result
↓
Finish safely

Step-by-Step Instructions

1. Place a document straight on the scanner.
2. Choose PDF for a paper document.
3. Preview the scan.
4. Save as "2026-06-Clinic-Form.pdf".

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: scanning a My Number Card-related instruction sheet for personal records without sharing sensitive details.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Place a document straight on the scanner.
2. Choose PDF for a paper document.
3. Preview the scan.
4. Save as "2026-06-Clinic-Form.pdf".
5. Write one sentence in your notebook about what you practiced.

At the end, explain the task in your own words. A simple explanation is enough.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To scan paper documents and save them with clear names.
2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. scanning a My Number Card-related instruction sheet for personal records without sharing sensitive details.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Scanning Documents to PDF or JPEG: Scan paper documents and save them with clear names.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced scanning documents to pdf or jpeg. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12-L05 Convenience Store Printing in Japan

Learning Objectives

By the end of this lesson, the learner can:

- Understand basic workflow for printing outside home in Japan. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Why convenience store printing is useful. Notice this idea on the screen and connect it to a real task.
- PDF preparation before going. Notice this idea on the screen and connect it to a real task.
- USB, smartphone app, or cloud upload depending on service. Notice this idea on the screen and connect it to a real task.
- Privacy habit: delete files after printing when possible. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to understand basic workflow for printing outside home in Japan

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Prepare a PDF file before leaving home.
2. Check the file name.
3. Bring the file on a phone or USB if appropriate.
4. After printing, confirm no pages are left behind.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: printing a travel document or application form at a convenience store when no home printer is available.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Prepare a PDF file before leaving home.
2. Check the file name.
3. Bring the file on a phone or USB if appropriate.
4. After printing, confirm no pages are left behind.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To understand basic workflow for printing outside home in Japan.
2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Use view-only permission when you do not want another person to change your file.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. printing a travel document or application form at a convenience store when no home printer is available.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Convenience Store Printing in Japan: Understand basic workflow for printing outside home in Japan.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced convenience store printing in Japan. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12-L06 Troubleshooting Printer and Scanner Problems

Learning Objectives

By the end of this lesson, the learner can:

- Solve common problems calmly without pressing random buttons. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese daily-life task such

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Printer offline. Notice this idea on the screen and connect it to a real task.
- Paper jam. Notice this idea on the screen and connect it to a real task.
- Low ink or toner. Notice this idea on the screen and connect it to a real task.
- Scanner cannot find device. Notice this idea on the screen and connect it to a real task.
- Wrong printer selected. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to solve common problems calmly without pressing random buttons

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Read the error message slowly.
2. Check power and cable or Wi-Fi.
3. Check paper tray and paper jam areas.
4. Restart the printer and try one test page.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: fixing a “printer offline” message before printing a Word document.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Read the error message slowly.
2. Check power and cable or Wi-Fi.
3. Check paper tray and paper jam areas.
4. Restart the printer and try one test page.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: “I check first, then I click.”

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To solve common problems calmly without pressing random buttons.
2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Keep personal numbers, banking details, and passwords out of practice files.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. fixing a “printer offline” message before printing a Word document.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Troubleshooting Printer and Scanner Problems: Solve common problems calmly without pressing random buttons.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced troubleshooting printer and scanner problems. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12-L07 Complete Paperwork Workflow: Scan, Save, Share, Print

Learning Objectives

By the end of this lesson, the learner can:

- Combine scanning, cloud storage, email, and printing into one safe workflow. - Recognize the important words and screen areas. - Use a slow step-by-step routine instead of guessing. - Connect the skill to a Japanese

Why This Matters

This skill matters because daily life now mixes paper, email, cloud storage, Microsoft 365, and printing. A senior may need to reply to family, save a document, prepare a clinic form, share a file, or print a PDF. The goal is calm control, not speed.

Prerequisites

Before starting, the learner should be able to:

- Turn on the computer and sign in. - Click, scroll, and type a short sentence. - Open a browser or Microsoft 365 app. - Use practice files or drafts during learning. - Ask for help when

Lesson Content

Main ideas in this lesson:

- Scan to PDF. Notice this idea on the screen and connect it to a real task.
- Save to OneDrive or Google Drive. Notice this idea on the screen and connect it to a real task.
- Email attachment or share link. Notice this idea on the screen and connect it to a real task.
- Print a copy for personal records. Notice this idea on the screen and connect it to a real task.

Use this routine every time: say the task, find the place, do one small action, check the result, finish safely. Forgetting a button is normal. Remembering the routine is more important.

Visual Explanation

Need to combine scanning, cloud storage, email, and printing into one safe workflow

↓

Open the correct tool

↓

Do one small action

↓

Check the result

↓

Finish safely

Step-by-Step Instructions

1. Scan one practice document.
2. Save it in a cloud folder named “Important Documents”.
3. Attach it to a draft email to yourself.
4. Print one copy if needed.

After the steps, pause and check the result. This prevents wrong attachments, wrong printers, wrong folders, and accidental sharing.

Guided Example

Example situation: scanning a signed form, saving it to Google Drive, emailing it through Gmail, and printing a copy for a folder.

The learner opens the correct tool, reads the screen slowly, and looks for familiar words from the lesson. If a file, address, link, or printer is involved, they check it twice before the final action. A helper should guide with questions, not take the mouse immediately.

Practice Exercise

Use a safe practice account, practice file, or draft. Do not use private information.

1. Scan one practice document.
2. Save it in a cloud folder named "Important Documents".
3. Attach it to a draft email to yourself.
4. Print one copy if needed.
5. Write one sentence in your notebook about what you practiced.

Challenge Exercise

Repeat the task with one small change, such as a different safe file, folder name, subject line, slide title, or print setting. If the learner feels lost for more than two minutes, stop and return to the normal steps.

Common Mistakes

- Clicking too fast.
- Forgetting to check the file name, email address, folder name, or printer name.
- Practicing with an important real document instead of a safe test file.
- Closing before checking that the work was saved or sent correctly.

Troubleshooting

- Problem: I cannot find the button. Try this: Look for similar words, icons, or three dots. - Problem: The screen is different. Try this: Focus on the task goal and find the same function in a nearby menu. - Problem: I made a mistake. Try this: Use Undo if available. For real files or accounts, stop and ask for help. - Problem: I am not sure if this is safe.

Memory Reinforcement

- Say the task out loud before clicking. This slows the hands and helps the brain remember.
- Use the same folder names again and again. Repetition is more helpful than clever organization.
- Repeat: "I check first, then I click."

Quick Notes

- Use clear names for files, folders, subjects, and slides.
- Check before sending, sharing, deleting, or printing.
- Stop if a screen asks for money, passwords, urgent login, or personal numbers.
- Keep practice separate from real private documents.

Quiz Answers

1. To combine scanning, cloud storage, email, and printing into one safe workflow.
2. Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.
3. Slow work helps the learner notice mistakes before final actions.
4. Check the file, folder, address, printer, permission, or preview.
5. Do not rush when a message says “urgent”. Urgency is often used in scams.
6. Look for similar words or icons and ask for help before changing settings.
7. They protect real private documents while learning.
8. scanning a signed form, saving it to Google Drive, emailing it through Gmail, and printing a copy for a folder.
9. Stop and ask a trusted person for help.
10. Confirm the result and save or close safely.

Flashcards

- Complete Paperwork Workflow: Combine scanning, cloud storage, email, and printing into one safe workflow.
- Practice file: A safe sample file for learning.
- Preview: A check before printing, sending, or exporting.
- View-only: A sharing setting that prevents editing.
- Stop-check-click: Pause, check carefully, then click.

Summary

In this lesson, the learner practiced complete paperwork workflow: scan, save, share, print. The most important habit is to work slowly, check the result, and finish safely. Confidence comes from repeated safe practice.

M12 Module Review - Printing & Scanning

Module Purpose

The purpose of M12 Printing & Scanning is to help a senior learner print, scan, save, and share paper documents safely and confidently. This module is written for senior beginners who may forget steps, worry about mistakes, or feel nervous when a screen changes. The module uses simple English and Japan-focused examples, including Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.

Lesson Numbering and Titles

- M12-L01 Printer and Scanner Basics - Understand printer types, scanner types, paper, ink, and pdf/jpeg output.
- M12-L02 Printing from Windows, Word, Excel, and PDF - Print from common apps while checking preview first.
- M12-L03 Important Print Settings - Use paper size, orientation, color, black-and-white, and double-sided settings.
- M12-L04 Scanning Documents to PDF or JPEG - Scan paper documents and save them with clear names.
- M12-L05 Convenience Store Printing in Japan - Understand basic workflow for printing outside home in Japan.
- M12-L06 Troubleshooting Printer and Scanner Problems - Solve common problems calmly without pressing random buttons.
- M12-L07 Complete Paperwork Workflow: Scan, Save, Share, Print - Combine scanning, cloud storage, email, and printing into one safe workflow.

Big Ideas to Remember

1. One task at a time. Do not mix too many actions.
2. Check the place. Know which app, folder, account, file, or printer you are using.
3. Use clear names. A clear name is better than a clever name.
- 4.

M12 Module Quiz - Printing & Scanning

1. In M12-L01, what is the main skill?
2. Give one real-life example for Printer and Scanner Basics.
3. In M12-L02, what is the main skill?
4. Give one real-life example for Printing from Windows, Word, Excel, and PDF.
5. In M12-L03, what is the main skill?
6. Give one real-life example for Important Print Settings.
7. In M12-L04, what is the main skill?
8. Give one real-life example for Scanning Documents to PDF or JPEG.
9. In M12-L05, what is the main skill?
10. Give one real-life example for Convenience Store Printing in Japan.
11. In M12-L06, what is the main skill?
12. Give one real-life example for Troubleshooting Printer and Scanner Problems.
13. In M12-L07, what is the main skill?
14. Give one real-life example for Complete Paperwork Workflow: Scan, Save, Share, Print.
15. Why should a senior learner use practice files first?
16. What should you check before sharing something?
17. What should you do before printing?
18. What should you do if an email or cloud link looks suspicious?
19. Why are clear titles and file names useful?
20. Which services are used as examples in this module?

M12 Practical Assessment - Printing & Scanning

Assessment Purpose

This practical assessment checks whether the learner can use Printing & Scanning skills in a calm and safe way. The assessment should use practice accounts and sample files only. Do not use real bank, payment, My Number Card, password, or medical information.

Tools and Examples

Suggested tools/examples: Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive.

Performance Tasks

- Task 1: Complete a safe practice activity from M12-L01 Printer and Scanner Basics. Expected result: the learner can understand printer types, scanner types, paper, ink, and PDF/JPEG output. - Task 2: Complete a safe practice activity from M12-L02 Printing from Windows, Word, Excel, and PDF. Expected result: the learner can print from common apps while checking preview first. - Task 3: Complete a safe practice activity from M12-L03 Important Print Settings. Expected result: the learner can use paper size, orientation, color, black-and-white, and double-sided settings. - Task 4: Complete a safe practice activity from M12-L04 Scanning Documents to PDF or JPEG. Expected result: the learner can scan paper documents and save them with clear names. - Task 5: Complete a safe practice activity from M12-L05 Convenience Store Printing in Japan. Expected result: the learner can understand basic workflow for printing outside home in Japan. - Task 6: Complete a safe practice activity from M12-L06 Troubleshooting Printer and Scanner Problems. Expected result: the learner can solve common problems calmly without pressing random buttons. - Task

M12 Module Flashcards - Printing & Scanning

Use these flashcards for quick review. Read the front first, then cover the back and try to explain it in your own words.

1. Printer and Scanner Basics - Understand printer types, scanner types, paper, ink, and pdf/jpeg output.
2. Printer, scanner, all-in-one device - A key idea in M12-L01. It helps the learner complete tasks more safely and clearly.
3. Inkjet, laser, and photo printing in simple terms - A key idea in M12-L01. It helps the learner complete tasks more safely and clearly.
4. Printing from Windows, Word, Excel, and PDF - Print from common apps while checking preview first.
5. Print command and keyboard shortcut - A key idea in M12-L02. It helps the learner complete tasks more safely and clearly.
6. Printer selection - A key idea in M12-L02. It helps the learner complete tasks more safely and clearly.
7. Important Print Settings - Use paper size, orientation, color, black-and-white, and double-sided settings.
8. A4 versus letter size - A key idea in M12-L03. It helps the learner complete tasks more safely and clearly.
9. Portrait versus landscape - A key idea in M12-L03. It helps the learner complete tasks more safely and clearly.
10. Scanning Documents to PDF or JPEG - Scan paper documents and save them with clear names.
11. Flatbed scanner and document feeder - A key idea in M12-L04. It helps the learner complete tasks more safely and clearly.
12. Resolution in simple terms - A key idea in M12-L04. It helps the learner complete tasks more safely and clearly.
13. Convenience Store Printing in Japan - Understand basic workflow for printing outside home in Japan.
14. Why convenience store printing is useful - A key idea in M12-L05. It helps the learner complete tasks more safely and clearly.
15. PDF preparation before going - A key idea in M12-L05. It helps the learner complete tasks more safely and clearly.
16. Troubleshooting Printer and Scanner Problems - Solve common problems calmly without pressing random buttons.
17. Printer offline - A key idea in M12-L06. It helps the learner complete tasks more safely and clearly.
18. Paper jam - A key idea in M12-L06. It helps the learner complete tasks more safely and clearly.
19. Complete Paperwork Workflow: Scan, Save, Share, Print - Combine scanning, cloud storage, email, and printing into one safe workflow.
20. Scan to PDF - A key idea in M12-L07. It helps the learner complete tasks more safely and clearly.

21. Save to OneDrive or Google Drive - A key idea in M12-L07. It helps the learner complete tasks more safely and clearly.
22. Stop-check-click - Pause, check the screen, then click only when ready.
23. Practice file - A safe file used for learning instead of a real private file.
24. View-only sharing - Permission that lets someone see a file but not change it.
25. Preview - A final check screen before printing, sending, or exporting.
26. Clear file name - A name that includes topic and date so the file is easy to find later.
27. Ask for help - The correct action when money, password, identity, banking, or urgent warning appears.

Review Method

Use five cards per day. A senior learner should not try to memorize all cards in one sitting. Repetition over many days is better than one long study session.

M12 Cheat Sheet - Printing & Scanning

Main Tools / Examples

Windows 11 printing, Microsoft Word, Excel, PowerPoint, PDF, OneDrive, Google Drive

Universal Senior-Friendly Routine

1. Say the task: "I am doing ____."
2. Check the app, account, file, folder, printer, or recipient.
3. Do one action at a time.
4. Preview or confirm the result.
5. Save, send, share, print, or close only after checking.

Lesson Quick Guide

M12-L01 Printer and Scanner Basics - Goal: Understand printer types, scanner types, paper, ink, and pdf/jpeg output. - Remember: Printer, scanner, all-in-one device. - Daily example: printing a Word document on A4 paper and scanning a clinic form as PDF. ###

M12-L02 Printing from Windows, Word, Excel, and PDF - Goal: Print from common apps while checking preview first. - Remember: Print command and keyboard shortcut. - Daily example: printing a one-page appointment reminder from Outlook or Gmail. ###

M12-L03 Important Print Settings - Goal: Use paper size, orientation, color, black-and-white, and double-sided settings. - Remember: A4 versus letter size. - Daily example: printing an Excel budget in landscape mode so all columns fit. ###

M12-L04 Scanning Documents to PDF or JPEG - Goal: Scan paper documents and save them with clear names. - Remember: Flatbed scanner and document

M13 Android Smartphones

M13-L01 Android Phone Parts and Home Screen

Learning Objectives

- Understand phone navigation in daily life.
- Practice Android Phone Parts and Home Screen slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Phone Parts and Home Screen matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: Home screen, apps, swipe, tap, notification.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Only install apps from trusted places such as Google Play. Do not install apps from unknown SMS links.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Unlock the Android phone with PIN, pattern, fingerprint, or face unlock.
2. Look at the Home screen and find the app icons.
3. Swipe up or tap the app drawer to see all apps.
4. Tap Settings, then return to Home.
5. Swipe down once to see notifications, then swipe up to close them.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The teacher asks the learner to find LINE on the Home screen, open it, then press Home without sending any message.

Practice Exercise

1. Open the correct app or setting for Android Phone Parts and Home Screen.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Android safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Phone Parts and Home Screen with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L02 Android Touch Gestures and Navigation

Learning Objectives

- Understand touch control in daily life.
- Practice Android Touch Gestures and Navigation slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Touch Gestures and Navigation matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: tap, long press, drag, swipe, back gesture.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not long-press unknown links or images in suspicious messages. Long press can open extra actions.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Practice one tap on a safe icon such as Clock.
2. Practice swipe left and right on the Home screen.
3. Practice the Back gesture or Back button.
4. Practice long press on an empty Home screen area, then cancel.
5. Practice recent apps and close only a practice app.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner opens Calculator, presses Back, opens Recent Apps, and returns Home.

Practice Exercise

1. Open the correct app or setting for Android Touch Gestures and Navigation.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Android safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Touch Gestures and Navigation with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L03 Android Settings, Wi-Fi, and Mobile Data

Learning Objectives

- Understand connection settings in daily life.
- Practice Android Settings, Wi-Fi, and Mobile Data slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Settings, Wi-Fi, and Mobile Data matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: Wi-Fi, mobile data, airplane mode, Bluetooth, hotspot.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not join unknown free Wi-Fi for banking or payments. Public Wi-Fi can be unsafe.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Settings.
2. Tap Network & internet or Connections.
3. Check Wi-Fi is on.
4. Connect to a trusted Wi-Fi name.
5. Check mobile data is on or off depending on the plan.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner connects to home Wi-Fi, opens a website, then turns Wi-Fi off and sees the difference.

Practice Exercise

1. Open the correct app or setting for Android Settings, Wi-Fi, and Mobile Data.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Android Settings safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Settings, Wi-Fi, and Mobile Data with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L04 Google Account and Play Store Basics

Learning Objectives

- Understand account and app installation in daily life.
- Practice Google Account and Play Store Basics slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Google Account and Play Store Basics matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: Google Account, Play Store, install, update, permissions.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A fake app can steal data. Check app name, developer, reviews, and official source before installing.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Play Store.
2. Search for a known app such as LINE or PayPay.
3. Look at the app name and developer.
4. Find the Install or Update button.
5. Read permission requests before allowing.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner searches for PayPay, checks that it is the official app, then stops before installing if not needed.

Practice Exercise

1. Open the correct app or setting for Google Account and Play Store Basics.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Google Play safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Google Account and Play Store Basics with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L05 Calls, Contacts, SMS, and LINE on Android

Learning Objectives

- Understand communication in daily life.
- Practice Calls, Contacts, SMS, and LINE on Android slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Calls, Contacts, SMS, and LINE on Android matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: contact, SMS, call log, block, friend.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Scam SMS often pretends to be delivery, tax, bank, or payment notices. Do not tap links in unexpected SMS.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Phone and view Contacts.
2. Add a practice contact if allowed.
3. Open Messages and identify a normal SMS.
4. Open LINE and view the Friends tab.
5. Practice sending a simple LINE sticker to a trusted person.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner receives a practice LINE message from a family member and replies “OK” without opening any external link.

Practice Exercise

1. Open the correct app or setting for Calls, Contacts, SMS, and LINE on Android.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use LINE safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Calls, Contacts, SMS, and LINE on Android with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L06 Android Camera and Photos

Learning Objectives

- Understand photo management in daily life.
- Practice Android Camera and Photos slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Camera and Photos matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: camera, gallery, share, delete, backup.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Be careful when sharing photos. Photos can reveal faces, location, documents, cards, or home details.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Camera.
2. Take one practice photo.
3. Open Photos or Gallery.
4. Find the photo.
5. Share the photo to a trusted LINE chat if safe.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner takes a photo of a cup, sends it to a family LINE group, then deletes only the practice photo.

Practice Exercise

1. Open the correct app or setting for Android Camera and Photos.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Google Photos safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Camera and Photos with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L07 Android Maps, Translation, and Daily Travel

Learning Objectives

- Understand travel support in daily life.
- Practice Android Maps, Translation, and Daily Travel slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Maps, Translation, and Daily Travel matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: map, route, GPS, translation, offline.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not share live location with strangers. Location is private information.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Google Maps.
2. Search for a known place such as a station.
3. Tap Directions.
4. Choose walking, train, or car.
5. Open Google Translate and translate a short phrase.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner searches for the nearest train station and checks the walking route, then closes Maps.

Practice Exercise

1. Open the correct app or setting for Android Maps, Translation, and Daily Travel.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Google Maps safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Maps, Translation, and Daily Travel with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L08 Android Accessibility for Senior Eyes and Hands

Learning Objectives

- Understand accessibility in daily life.
- Practice Android Accessibility for Senior Eyes and Hands slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Accessibility for Senior Eyes and Hands matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: text size, display size, magnification, voice input, TalkBack.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Accessibility helps comfort. It is not cheating. It makes the phone easier and safer.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Settings.
2. Search for Accessibility.
3. Increase text size one step.
4. Turn on bold text or high contrast if available.
5. Practice voice input in a safe note.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner increases text size, opens LINE, checks readability, and adjusts again if needed.

Practice Exercise

1. Open the correct app or setting for Android Accessibility for Senior Eyes and Hands.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Android Settings safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Accessibility for Senior Eyes and Hands with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L09 Android Backup, Updates, and Storage

Learning Objectives

- Understand maintenance in daily life.
- Practice Android Backup, Updates, and Storage slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Backup, Updates, and Storage matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: backup, update, storage, cache, cloud.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Updates protect the phone. Backups protect memories. Both should be done from official settings only.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Settings.
2. Find System Update or Software Update.
3. Check if an update is available.
4. Open Storage and check free space.
5. Open Google account backup settings.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks storage and learns which photos or apps use the most space without deleting anything yet.

Practice Exercise

1. Open the correct app or setting for Android Backup, Updates, and Storage.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Android Settings safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Backup, Updates, and Storage with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13-L10 Android Safety Checklist Before Payments or Banking

Learning Objectives

- Understand safe smartphone use in daily life.
- Practice Android Safety Checklist Before Payments or Banking slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Android Safety Checklist Before Payments or Banking matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Android Smartphones. The goal is calm use, not fast tapping.

Important words: screen lock, biometrics, official app, one-time code, logout.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Never share a bank password, cash card PIN, one-time password, or SMS code. A real bank will not ask for it by phone or message.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Check the phone has a screen lock.
2. Open the payment or banking app from the Home screen only.
3. Check the app name and screen title.
4. Read the amount or account name carefully.
5. Cancel if the request came from a message link.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner opens PayPay from the Home screen, checks balance, then closes the app without sending money.

Practice Exercise

1. Open the correct app or setting for Android Safety Checklist Before Payments or Banking.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Android safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Android Safety Checklist Before Payments or Banking with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M13 Module Review - Android Smartphones

Purpose

Review the module slowly. The goal is confidence and safe habits, not speed.

Lesson Review

- M13-L01 Android Phone Parts and Home Screen
- M13-L02 Android Touch Gestures and Navigation
- M13-L03 Android Settings, Wi-Fi, and Mobile Data
- M13-L04 Google Account and Play Store Basics
- M13-L05 Calls, Contacts, SMS, and LINE on Android
- M13-L06 Android Camera and Photos
- M13-L07 Android Maps, Translation, and Daily Travel
- M13-L08 Android Accessibility for Senior Eyes and Hands
- M13-L09 Android Backup, Updates, and Storage
- M13-L10 Android Safety Checklist Before Payments or Banking

Main Safety Ideas

- Open official apps or trusted bookmarks.
- Read the screen title before tapping.
- Stop when money, passwords, PINs, one-time codes, My Number details, or card information appear.
- Do not use links from unexpected SMS, email, or LINE messages.
- Ask trusted help early. Stopping is safety, not failure.

Review Activity

Use three cards: Safe, Check, and Stop. Read examples such as a normal family LINE message, a fake bank SMS, a Rakuten order notice inside the official app, a QR sticker on a public sign, or a support pop-up. The learner chooses a card and explains why.

Confidence Checklist - I can find the official app. - I can read before tapping. - I can stop at a confirmation screen. - I can protect passwords and codes. - I can ask for help without

M13 Module Quiz - Android Smartphones

1. In Android Phone Parts and Home Screen, what is the safest first action?
2. Why should a learner be careful with Android?
3. In Android Touch Gestures and Navigation, what is the safest first action?
4. Why should a learner be careful with Android?
5. In Android Settings, Wi-Fi, and Mobile Data, what is the safest first action?
6. Why should a learner be careful with Android Settings?
7. In Google Account and Play Store Basics, what is the safest first action?
8. Why should a learner be careful with Google Play?
9. In Calls, Contacts, SMS, and LINE on Android, what is the safest first action?
10. Why should a learner be careful with LINE?
11. In Android Camera and Photos, what is the safest first action?
12. Why should a learner be careful with Google Photos?
13. In Android Maps, Translation, and Daily Travel, what is the safest first action?
14. Why should a learner be careful with Google Maps?
15. In Android Accessibility for Senior Eyes and Hands, what is the safest first action?
16. Why should a learner be careful with Android Settings?
17. In Android Backup, Updates, and Storage, what is the safest first action?
18. Why should a learner be careful with Android Settings?
19. In Android Safety Checklist Before Payments or Banking, what is the safest first action?
20. Why should a learner be careful with Android?

M13 Practical Assessment - Android Smartphones

Goal

The learner demonstrates safe practical use. Safe stopping receives credit.

Safety Rules

- Use demo accounts or supervised real accounts only.
- Do not reveal real passwords, PINs, bank balances, My Number details, or card numbers.
- Do not complete real payments, transfers, purchases, or account changes unless clearly approved.

Tasks

1. Open the correct official app or setting for one lesson task.
2. Read the screen title and explain what the next button does.
3. Find Back, Cancel, Close, or Home.
4. Identify whether the task includes money, personal information, password, PIN, or code.
5. Sort five mock messages into Safe, Check, or Stop.

Rubric

Skill	Pass
Official app	Opens from Home screen, trusted store, or bookmark
Screen reading	Reads title and final button before tapping
Secret protection	Does not share passwords, PINs, or codes
Scam response	Stops and verifies suspicious requests
Confidence	Can ask for help calmly

Teacher Notes

Praise careful checking. Repeat weak tasks with the same example and one new example.

M13 Flashcards - Android Smartphones

Use these cards for short daily review. Ask the learner to answer in their own words.

Cards - Front: Official app Back: An app installed from the correct store or opened from a known source. - Front: Stop, Check, Confirm Back: Pause, inspect the request, and verify through a separate trusted channel. - Front: One-time code Back: A temporary secret code. Never share it with another person. - Front: Confirmation screen Back: The screen where you check details before final action. - Front: Phishing Back: A fake message or site that tries to steal information. - Front: Smishing Back: Phishing through SMS text message. - Front: QR scam Back: A QR code that sends you to a fake or dangerous site. - Front: Tech support scam Back: A fake helper who tries to get money, codes, or remote control. - Front: Bank transfer safety Back: Check bank name, branch, account number, recipient, amount, and fee. - Front: My Number safety Back: Use official government services and protect My Number Card details. - Front: Android Back: Practice example for Android Phone Parts and Home Screen: phone navigation. - Front: M13-L01 Back: Main lesson: Android Phone Parts and Home Screen. - Front: Android Back: Practice example

M13 Cheat Sheet - Android Smartphones

Universal Routine

1. Open the official app or trusted bookmark.
2. Read the screen title.
3. Check person, amount, link, password, PIN, code, or permission.
4. Stop if anything feels strange.
5. Close the app and lock the phone.

Red Flags

- Urgent messages: today, final notice, account locked, unpaid, police, refund.
- Requests for password, PIN, SMS code, one-time password, My Number Card photo, or cash card details.
- Money request from someone who refuses a normal phone call.
- QR sticker placed over another QR code.
- Support person asking for remote control.
- Bank transfer requested to fix a problem or receive a prize.

Safe Alternatives

- Use LINE only with known contacts.
- Use PayPay, Rakuten, Mercari, and bank apps from the Home screen.
- Use official bank phone numbers from bank cards or official websites.
- Use Mynaportal/My Number services only from official apps and official guidance.

Lesson Map - M13-L01 Android Phone Parts and Home Screen - M13-L02 Android Touch Gestures and Navigation - M13-L03 Android Settings, Wi-Fi, and Mobile Data - M13-L04 Google Account and Play Store Basics - M13-L05 Calls, Contacts, SMS, and LINE on Android - M13-L06 Android Camera and Photos -

M14 iPhone Basics

M14-L01 iPhone Buttons, Home Screen, and Control Center

Learning Objectives

- Understand iPhone navigation in daily life.
- Practice iPhone Buttons, Home Screen, and Control Center slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

iPhone Buttons, Home Screen, and Control Center matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: Side button, Home screen, Control Center, swipe, tap.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not approve sign-in or payment prompts you did not start.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Wake the iPhone with the Side button.
2. Unlock with passcode, Face ID, or Touch ID.
3. Swipe between Home screens.
4. Open Control Center.
5. Return to Home.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner opens Clock, returns Home, and opens Control Center to change brightness.

Practice Exercise

1. Open the correct app or setting for iPhone Buttons, Home Screen, and Control Center.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use iPhone safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced iPhone Buttons, Home Screen, and Control Center with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L02 Apple ID and App Store Basics

Learning Objectives

- Understand Apple account and apps in daily life.
- Practice Apple ID and App Store Basics slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Apple ID and App Store Basics matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: Apple ID, App Store, Get, Update, subscription.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not give Apple ID password or verification code to anyone. Be careful with subscriptions.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open App Store.
2. Search for a known app.
3. Check app name and developer.
4. Find Get, Open, or Update.
5. Open Account icon and view updates.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner searches for Mercari, checks the official app, and learns the difference between Get and Open.

Practice Exercise

1. Open the correct app or setting for Apple ID and App Store Basics.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use App Store safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Apple ID and App Store Basics with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L03 iPhone Wi-Fi, Cellular, and Bluetooth

Learning Objectives

- Understand connection settings in daily life.
- Practice iPhone Wi-Fi, Cellular, and Bluetooth slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

iPhone Wi-Fi, Cellular, and Bluetooth matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: Wi-Fi, Cellular, Bluetooth, Airplane Mode, Personal Hotspot.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Avoid banking or payment actions on unknown public Wi-Fi. Use mobile data if unsure.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Settings.
2. Tap Wi-Fi and choose trusted Wi-Fi.
3. Tap Cellular and check mobile data.
4. Find Bluetooth and paired devices.
5. Check Airplane Mode is off.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner connects to home Wi-Fi and turns Bluetooth on only for known earphones.

Practice Exercise

1. Open the correct app or setting for iPhone Wi-Fi, Cellular, and Bluetooth.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use iPhone Settings safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced iPhone Wi-Fi, Cellular, and Bluetooth with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L04 Phone, Messages, FaceTime, and LINE on iPhone

Learning Objectives

- Understand communication in daily life.
- Practice Phone, Messages, FaceTime, and LINE on iPhone slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Phone, Messages, FaceTime, and LINE on iPhone matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: contact, message, FaceTime, block, report.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Scam SMS can appear in the same app as real messages. A familiar app does not mean every message is safe.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Phone and view Recents.
2. Open Contacts and find a trusted contact.
3. Open Messages and identify SMS.
4. Open LINE and send a safe practice message.
5. Find how to block unknown senders or report spam.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner replies to a family LINE message, then identifies a fake delivery SMS example without tapping it.

Practice Exercise

1. Open the correct app or setting for Phone, Messages, FaceTime, and LINE on iPhone.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use LINE safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Phone, Messages, FaceTime, and LINE on iPhone with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L05 iPhone Camera, Photos, and iCloud

Learning Objectives

- Understand photo management in daily life.
- Practice iPhone Camera, Photos, and iCloud slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

iPhone Camera, Photos, and iCloud matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: camera, album, share sheet, iCloud, delete.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not photograph My Number Card, cash cards, or passwords unless there is a very clear official reason.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Camera and take a practice photo.
2. Open Photos and find Recents.
3. Use Share button carefully.
4. Create or view an album.
5. Delete the practice photo.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner photographs a pen, shares it to a trusted LINE chat, and deletes the test photo.

Practice Exercise

1. Open the correct app or setting for iPhone Camera, Photos, and iCloud.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Photos safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced iPhone Camera, Photos, and iCloud with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L06 Safari and Safe Web Browsing on iPhone

Learning Objectives

- Understand web browsing in daily life.
- Practice Safari and Safe Web Browsing on iPhone slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Safari and Safe Web Browsing on iPhone matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: Safari, address bar, tab, bookmark, private browsing.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A fake website can copy a real logo. Use official apps or saved bookmarks for important services.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Safari.
2. Tap the address bar.
3. Search for a safe topic.
4. Open a new tab.
5. Close a tab.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner opens the official weather page from a bookmark and closes extra tabs.

Practice Exercise

1. Open the correct app or setting for Safari and Safe Web Browsing on iPhone.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Safari safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Safari and Safe Web Browsing on iPhone with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L07 Maps, Transit, and Translation on iPhone

Learning Objectives

- Understand travel support in daily life.
- Practice Maps, Transit, and Translation on iPhone slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Maps, Transit, and Translation on iPhone matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: route, transit, location, translation, share ETA.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Share location only with trusted people and only when needed.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Maps.
2. Search for a station or city office.
3. Tap Directions.
4. Choose transit or walking.
5. Open Translate and translate a simple phrase.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks a route to a hospital and practices reading arrival time.

Practice Exercise

1. Open the correct app or setting for Maps, Transit, and Translation on iPhone.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Apple Maps safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Maps, Transit, and Translation on iPhone with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L08 Wallet, Suica, and Daily Payment Preparation

Learning Objectives

- Understand wallet basics in daily life.
- Practice Wallet, Suica, and Daily Payment Preparation slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Wallet, Suica, and Daily Payment Preparation matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: Wallet, card, balance, Face ID, double-click.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not add a card while someone is coaching you by phone. Fraudsters may guide victims step by step.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Wallet.
2. View cards without making a payment.
3. Check Suica or PASMO balance if available.
4. Practice double-click only if safe.
5. Cancel before any real purchase.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner opens Wallet at home, reads the Suica balance, and closes it without paying.

Practice Exercise

1. Open the correct app or setting for Wallet, Suica, and Daily Payment Preparation.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Apple Wallet safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Wallet, Suica, and Daily Payment Preparation with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L09 My Number Card and iPhone Government Services

Learning Objectives

- Understand government service access in daily life.
- Practice My Number Card and iPhone Government Services slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

My Number Card and iPhone Government Services matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: NFC scan, 4-digit PIN, certificate, government service, official app.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Only use official Mynaportal/My Number services. Ignore links in strange emails or SMS claiming urgent My Number problems.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open the official Mynaportal app if installed.
2. Check that the learner has My Number Card ready.
3. Read the screen before entering the 4-digit PIN.
4. Practice card scanning only with teacher guidance.
5. Close the app after practice.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner learns where the iPhone reads the card and practices positioning without submitting any application.

Practice Exercise

1. Open the correct app or setting for My Number Card and iPhone Government Services.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Mynaportal safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced My Number Card and iPhone Government Services with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14-L10 iPhone Security, Backup, and Emergency Habits

Learning Objectives

- Understand security and maintenance in daily life.
- Practice iPhone Security, Backup, and Emergency Habits slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

iPhone Security, Backup, and Emergency Habits matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of iPhone Basics. The goal is calm use, not fast tapping.

Important words: passcode, Face ID, Find My, backup, update.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A strong passcode and updates are more important than many complicated apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Settings.
2. Check Face ID/Touch ID & Passcode.
3. Check Software Update.
4. Check iCloud Backup.
5. Find Emergency SOS settings.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks whether iCloud Backup is on and learns how to update iOS safely.

Practice Exercise

1. Open the correct app or setting for iPhone Security, Backup, and Emergency Habits.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use iPhone Settings safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced iPhone Security, Backup, and Emergency Habits with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M14 Module Review - iPhone Basics

Purpose

Review the module slowly. The goal is confidence and safe habits, not speed.

Lesson Review

- M14-L01 iPhone Buttons, Home Screen, and Control Center
- M14-L02 Apple ID and App Store Basics
- M14-L03 iPhone Wi-Fi, Cellular, and Bluetooth
- M14-L04 Phone, Messages, FaceTime, and LINE on iPhone
- M14-L05 iPhone Camera, Photos, and iCloud
- M14-L06 Safari and Safe Web Browsing on iPhone
- M14-L07 Maps, Transit, and Translation on iPhone
- M14-L08 Wallet, Suica, and Daily Payment Preparation
- M14-L09 My Number Card and iPhone Government Services
- M14-L10 iPhone Security, Backup, and Emergency Habits

Main Safety Ideas

- Open official apps or trusted bookmarks.
- Read the screen title before tapping.
- Stop when money, passwords, PINs, one-time codes, My Number details, or card information appear.
- Do not use links from unexpected SMS, email, or LINE messages.
- Ask trusted help early. Stopping is safety, not failure.

Review Activity

Use three cards: Safe, Check, and Stop. Read examples such as a normal family LINE message, a fake bank SMS, a Rakuten order notice inside the official app, a QR sticker on a public sign, or a support pop-up. The learner chooses a card and explains why.

Confidence Checklist - I can find the official app. - I can read before tapping. - I can stop at a confirmation screen. - I can protect passwords and codes. - I can ask

M14 Module Quiz - iPhone Basics

1. In iPhone Buttons, Home Screen, and Control Center, what is the safest first action?
2. Why should a learner be careful with iPhone?
3. In Apple ID and App Store Basics, what is the safest first action?
4. Why should a learner be careful with App Store?
5. In iPhone Wi-Fi, Cellular, and Bluetooth, what is the safest first action?
6. Why should a learner be careful with iPhone Settings?
7. In Phone, Messages, FaceTime, and LINE on iPhone, what is the safest first action?
8. Why should a learner be careful with LINE?
9. In iPhone Camera, Photos, and iCloud, what is the safest first action?
10. Why should a learner be careful with Photos?
11. In Safari and Safe Web Browsing on iPhone, what is the safest first action?
12. Why should a learner be careful with Safari?
13. In Maps, Transit, and Translation on iPhone, what is the safest first action?
14. Why should a learner be careful with Apple Maps?
15. In Wallet, Suica, and Daily Payment Preparation, what is the safest first action?
16. Why should a learner be careful with Apple Wallet?
17. In My Number Card and iPhone Government Services, what is the safest first action?
18. Why should a learner be careful with Mynaportal?
19. In iPhone Security, Backup, and Emergency Habits, what is the safest first action?
20. Why should a learner be careful with iPhone Settings?

M14 Practical Assessment - iPhone Basics

Goal

The learner demonstrates safe practical use. Safe stopping receives credit.

Safety Rules

- Use demo accounts or supervised real accounts only.
- Do not reveal real passwords, PINs, bank balances, My Number details, or card numbers.
- Do not complete real payments, transfers, purchases, or account changes unless clearly approved.

Tasks

1. Open the correct official app or setting for one lesson task.
2. Read the screen title and explain what the next button does.
3. Find Back, Cancel, Close, or Home.
4. Identify whether the task includes money, personal information, password, PIN, or code.
5. Sort five mock messages into Safe, Check, or Stop.

Rubric

Skill	Pass
Official app	Opens from Home screen, trusted store, or bookmark
Screen reading	Reads title and final button before tapping
Secret protection	Does not share passwords, PINs, or codes
Scam response	Stops and verifies suspicious requests
Confidence	Can ask for help calmly

Teacher Notes

Praise careful checking. Repeat weak tasks with the same example and one new example.

M14 Flashcards - iPhone Basics

Use these cards for short daily review. Ask the learner to answer in their own words.

Cards - Front: Official app Back: An app installed from the correct store or opened from a known source. - Front: Stop, Check, Confirm Back: Pause, inspect the request, and verify through a separate trusted channel. - Front: One-time code Back: A temporary secret code. Never share it with another person. - Front: Confirmation screen Back: The screen where you check details before final action. - Front: Phishing Back: A fake message or site that tries to steal information. - Front: Smishing Back: Phishing through SMS text message. - Front: QR scam Back: A QR code that sends you to a fake or dangerous site. - Front: Tech support scam Back: A fake helper who tries to get money, codes, or remote control. - Front: Bank transfer safety Back: Check bank name, branch, account number, recipient, amount, and fee. - Front: My Number safety Back: Use official government services and protect My Number Card details. - Front: iPhone Back: Practice example for iPhone Buttons, Home Screen, and Control Center: iPhone navigation. - Front: M14-L01 Back: Main lesson: iPhone Buttons, Home Screen, and Control Center. - Front: App Store

M14 Cheat Sheet - iPhone Basics

Universal Routine

1. Open the official app or trusted bookmark.
2. Read the screen title.
3. Check person, amount, link, password, PIN, code, or permission.
4. Stop if anything feels strange.
5. Close the app and lock the phone.

Red Flags

- Urgent messages: today, final notice, account locked, unpaid, police, refund.
- Requests for password, PIN, SMS code, one-time password, My Number Card photo, or cash card details.
- Money request from someone who refuses a normal phone call.
- QR sticker placed over another QR code.
- Support person asking for remote control.
- Bank transfer requested to fix a problem or receive a prize.

Safe Alternatives

- Use LINE only with known contacts.
- Use PayPay, Rakuten, Mercari, and bank apps from the Home screen.
- Use official bank phone numbers from bank cards or official websites.
- Use Mynaportal/My Number services only from official apps and official guidance.

Lesson Map - M14-L01 iPhone Buttons, Home Screen, and Control Center - M14-L02 Apple ID and App Store Basics - M14-L03 iPhone Wi-Fi, Cellular, and Bluetooth - M14-L04 Phone, Messages, FaceTime, and LINE on iPhone - M14-L05 iPhone Camera, Photos, and iCloud - M14-L06 Safari and Safe Web Browsing

M15 Digital Payments

M15-L01 What Are Digital Payments?

Learning Objectives

- Understand cashless payment basics in daily life.
- Practice What Are Digital Payments? slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

What Are Digital Payments? matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: cashless, QR code, balance, charge, receipt.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Treat digital money like cash. If you send it to the wrong person, it may be hard to recover.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Compare cash, card, QR payment, and transport IC payment.
2. Open a payment app in practice mode if available.
3. Find balance and transaction history.
4. Find help or support.
5. Close the app without paying.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner looks at PayPay balance at home and explains why it is not the same as a bank account.

Practice Exercise

1. Open the correct app or setting for What Are Digital Payments?.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced What Are Digital Payments? with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L02 PayPay Basic Setup and Screen Reading

Learning Objectives

- Understand PayPay navigation in daily life.
- Practice PayPay Basic Setup and Screen Reading slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

PayPay Basic Setup and Screen Reading matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: home screen, balance, charge, send, scan.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Never tell another person your PayPay verification code. Scammers use codes to take over accounts.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open PayPay from the Home screen.
2. Find Balance.
3. Find Scan and Pay.
4. Find Send/Receive but do not use it.
5. Find transaction history.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner opens PayPay, reads the balance, checks history, then closes the app.

Practice Exercise

1. Open the correct app or setting for PayPay Basic Setup and Screen Reading.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced PayPay Basic Setup and Screen Reading with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L03 Paying by QR Code at a Store

Learning Objectives

- Understand QR payment at stores in daily life.
- Practice Paying by QR Code at a Store slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Paying by QR Code at a Store matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: QR code, barcode, scan, amount, receipt.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Check the store name and amount before confirming. Do not scan random QR stickers on walls or posters.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Tell the cashier you want to pay with PayPay.
2. Open the official PayPay app.
3. Show barcode or scan the store QR depending on the store.
4. Check amount.
5. Tap Pay only after checking.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: In a classroom role-play, the teacher acts as cashier and the learner practices stopping at the amount confirmation.

Practice Exercise

1. Open the correct app or setting for Paying by QR Code at a Store.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Paying by QR Code at a Store with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L04 Charging Money and Managing Payment Balance

Learning Objectives

- Understand charging and budgeting in daily life.
- Practice Charging Money and Managing Payment Balance slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Charging Money and Managing Payment Balance matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: charge, bank link, ATM, budget, auto-charge.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Small balance is safer for beginners. Do not keep more money in a payment app than you are comfortable losing.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open PayPay or another payment app.
2. Find Charge.
3. Review charge methods.
4. Choose a small practice amount only if real practice is approved.
5. Check balance after charging.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner compares charging from bank account and ATM cash, then chooses the safer method for their comfort.

Practice Exercise

1. Open the correct app or setting for Charging Money and Managing Payment Balance.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Charging Money and Managing Payment Balance with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L05 Sending and Receiving Money Safely

Learning Objectives

- Understand personal remittance in daily life.
- Practice Sending and Receiving Money Safely slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Sending and Receiving Money Safely matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: send, receive, recipient, request, warning.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Never send money because of a sudden LINE, SMS, or phone request. Call the person using a known number first.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Send/Receive.
2. Search for a trusted practice recipient.
3. Check the recipient name and icon.
4. Enter a small test amount only if approved.
5. Read warning messages.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner receives a request supposedly from a grandchild. The correct action is to call the grandchild directly before sending.

Practice Exercise

1. Open the correct app or setting for Sending and Receiving Money Safely.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay Send safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Sending and Receiving Money Safely with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L06 Rakuten Pay, Points, and Receipts

Learning Objectives

- Understand points and receipts in daily life.
- Practice Rakuten Pay, Points, and Receipts slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Rakuten Pay, Points, and Receipts matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: points, campaign, receipt, history, limited-time points.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not buy something only because of points. Points are a bonus, not a reason to overspend.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Rakuten Pay if installed.
2. Find points balance.
3. Find payment history.
4. Read a campaign screen carefully.
5. Close pop-ups without joining anything.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks Rakuten points and decides whether points are regular or limited-time.

Practice Exercise

1. Open the correct app or setting for Rakuten Pay, Points, and Receipts.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten Pay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Rakuten Pay, Points, and Receipts with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L07 Transport IC and Smartphone Payments

Learning Objectives

- Understand transport payment basics in daily life.
- Practice Transport IC and Smartphone Payments slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Transport IC and Smartphone Payments matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: IC card, tap payment, balance, charge, gate.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: At train gates, keep calm. If the gate does not open, go to station staff instead of repeatedly tapping.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Wallet or mobile IC app.
2. Check balance.
3. Learn where to tap the phone.
4. Practice at home with a mock reader card.
5. Review what to do if balance is low.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks Suica balance before leaving home and plans to charge before travel.

Practice Exercise

1. Open the correct app or setting for Transport IC and Smartphone Payments.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Mobile Suica safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Transport IC and Smartphone Payments with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L08 Payment App Security and Privacy

Learning Objectives

- Understand payment security in daily life.
- Practice Payment App Security and Privacy slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Payment App Security and Privacy matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: PIN, biometrics, notification, history, privacy.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Turn on app lock or biometric confirmation if available. Review notifications for unexpected payments.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open payment app settings.
2. Find security settings.
3. Turn on passcode or biometric lock if available.
4. Check notification settings.
5. Review payment history for unknown payments.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks the last five transactions and marks which are familiar.

Practice Exercise

1. Open the correct app or setting for Payment App Security and Privacy.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Payment App Security and Privacy with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L09 Digital Payment Problems and Refunds

Learning Objectives

- Understand problem solving in daily life.
- Practice Digital Payment Problems and Refunds slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Digital Payment Problems and Refunds matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: refund, duplicate payment, support, receipt, transaction ID.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: For problems, contact the store or official app support. Do not trust support phone numbers from random search results or SMS.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Find transaction history.
2. Open one transaction.
3. Locate transaction ID or receipt.
4. Take a screenshot if safe.
5. Find official Help inside the app.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner practices explaining, “I think I paid twice. Here is my receipt screen.”

Practice Exercise

1. Open the correct app or setting for Digital Payment Problems and Refunds.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay Help safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Digital Payment Problems and Refunds with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15-L10 Digital Payment Review and Senior Safety Routine

Learning Objectives

- Understand complete payment routine in daily life.
- Practice Digital Payment Review and Senior Safety Routine slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Digital Payment Review and Senior Safety Routine matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Digital Payments. The goal is calm use, not fast tapping.

Important words: routine, budget, confirm, receipt, lock screen.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: The best payment user is not the fastest user. The best payment user checks calmly.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open the official payment app.
2. Check balance.
3. Confirm store and amount.
4. Pay only when ready.
5. Check receipt screen.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner performs a full role-play payment and explains every check before tapping.

Practice Exercise

1. Open the correct app or setting for Digital Payment Review and Senior Safety Routine.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use PayPay safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Digital Payment Review and Senior Safety Routine with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M15 Module Review - Digital Payments

Purpose

Review the module slowly. The goal is confidence and safe habits, not speed.

Lesson Review

- M15-L01 What Are Digital Payments?
- M15-L02 PayPay Basic Setup and Screen Reading
- M15-L03 Paying by QR Code at a Store
- M15-L04 Charging Money and Managing Payment Balance
- M15-L05 Sending and Receiving Money Safely
- M15-L06 Rakuten Pay, Points, and Receipts
- M15-L07 Transport IC and Smartphone Payments
- M15-L08 Payment App Security and Privacy
- M15-L09 Digital Payment Problems and Refunds
- M15-L10 Digital Payment Review and Senior Safety Routine

Main Safety Ideas

- Open official apps or trusted bookmarks.
- Read the screen title before tapping.
- Stop when money, passwords, PINs, one-time codes, My Number details, or card information appear.
- Do not use links from unexpected SMS, email, or LINE messages.
- Ask trusted help early. Stopping is safety, not failure.

Review Activity

Use three cards: Safe, Check, and Stop. Read examples such as a normal family LINE message, a fake bank SMS, a Rakuten order notice inside the official app, a QR sticker on a public sign, or a support pop-up. The learner chooses a card and explains why.

Confidence Checklist

- I can find the official app.
- I can read before tapping.
- I can stop at a confirmation screen.
- I can protect passwords and codes.
- I can ask for help without shame.

M15 Module Quiz - Digital Payments

1. In What Are Digital Payments?, what is the safest first action?
2. Why should a learner be careful with PayPay?
3. In PayPay Basic Setup and Screen Reading, what is the safest first action?
4. Why should a learner be careful with PayPay?
5. In Paying by QR Code at a Store, what is the safest first action?
6. Why should a learner be careful with PayPay?
7. In Charging Money and Managing Payment Balance, what is the safest first action?
8. Why should a learner be careful with PayPay?
9. In Sending and Receiving Money Safely, what is the safest first action?
10. Why should a learner be careful with PayPay Send?
11. In Rakuten Pay, Points, and Receipts, what is the safest first action?
12. Why should a learner be careful with Rakuten Pay?
13. In Transport IC and Smartphone Payments, what is the safest first action?
14. Why should a learner be careful with Mobile Suica?
15. In Payment App Security and Privacy, what is the safest first action?
16. Why should a learner be careful with PayPay?
17. In Digital Payment Problems and Refunds, what is the safest first action?
18. Why should a learner be careful with PayPay Help?
19. In Digital Payment Review and Senior Safety Routine, what is the safest first action?
20. Why should a learner be careful with PayPay?

M15 Practical Assessment - Digital Payments

Goal

The learner demonstrates safe practical use. Safe stopping receives credit.

Safety Rules

- Use demo accounts or supervised real accounts only.
- Do not reveal real passwords, PINs, bank balances, My Number details, or card numbers.
- Do not complete real payments, transfers, purchases, or account changes unless clearly approved.

Tasks

1. Open the correct official app or setting for one lesson task.
2. Read the screen title and explain what the next button does.
3. Find Back, Cancel, Close, or Home.
4. Identify whether the task includes money, personal information, password, PIN, or code.
5. Sort five mock messages into Safe, Check, or Stop.

Rubric

Skill	Pass
Official app	Opens from Home screen, trusted store, or bookmark
Screen reading	Reads title and final button before tapping
Secret protection	Does not share passwords, PINs, or codes
Scam response	Stops and verifies suspicious requests
Confidence	Can ask for help calmly

Teacher Notes

Praise careful checking. Repeat weak tasks with the same example and one new example.

M15 Flashcards - Digital Payments

Use these cards for short daily review. Ask the learner to answer in their own words.

Cards - Front: Official app Back: An app installed from the correct store or opened from a known source. - Front: Stop, Check, Confirm Back: Pause, inspect the request, and verify through a separate trusted channel. - Front: One-time code Back: A temporary secret code. Never share it with another person. - Front: Confirmation screen Back: The screen where you check details before final action. - Front: Phishing Back: A fake message or site that tries to steal information. - Front: Smishing Back: Phishing through SMS text message. - Front: QR scam Back: A QR code that sends you to a fake or dangerous site. - Front: Tech support scam Back: A fake helper who tries to get money, codes, or remote control. - Front: Bank transfer safety Back: Check bank name, branch, account number, recipient, amount, and fee. - Front: My Number safety Back: Use official government services and protect My Number Card details. - Front: PayPay Back: Practice example for What Are Digital Payments?: cashless payment basics. - Front: M15-L01 Back: Main lesson: What Are Digital Payments?. - Front: PayPay Back: Practice example for PayPay Basic

M15 Cheat Sheet - Digital Payments

Universal Routine

1. Open the official app or trusted bookmark.
2. Read the screen title.
3. Check person, amount, link, password, PIN, code, or permission.
4. Stop if anything feels strange.
5. Close the app and lock the phone.

Red Flags

- Urgent messages: today, final notice, account locked, unpaid, police, refund.
- Requests for password, PIN, SMS code, one-time password, My Number Card photo, or cash card details.
- Money request from someone who refuses a normal phone call.
- QR sticker placed over another QR code.
- Support person asking for remote control.
- Bank transfer requested to fix a problem or receive a prize.

Safe Alternatives

- Use LINE only with known contacts.
- Use PayPay, Rakuten, Mercari, and bank apps from the Home screen.
- Use official bank phone numbers from bank cards or official websites.
- Use Mynaportal/My Number services only from official apps and official guidance.

M16 Online Shopping

M16-L01 Online Shopping Basics and Safe Mindset

Learning Objectives

- Understand shopping basics in daily life.
- Practice Online Shopping Basics and Safe Mindset slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Online Shopping Basics and Safe Mindset matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: cart, checkout, delivery, review, seller.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A cheap price is not always a good deal. Safety, return rules, and seller trust matter.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open a trusted shopping app or website.
2. Search for a simple item.
3. Read product title.
4. Read price and shipping fee.
5. Find seller name and reviews.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner searches Rakuten for tea and compares two listings without purchasing.

Practice Exercise

1. Open the correct app or setting for Online Shopping Basics and Safe Mindset.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Online Shopping Basics and Safe Mindset with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L02 Rakuten Ichiba Product Search and Reviews

Learning Objectives

- Understand Rakuten shopping in daily life.
- Practice Rakuten Ichiba Product Search and Reviews slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Rakuten Ichiba Product Search and Reviews matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: search, filter, review, shipping, coupon.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Be careful with coupons and campaigns. Read conditions before using them.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Rakuten Ichiba.
2. Search for a household item.
3. Use filter or sort.
4. Read star rating and reviews.
5. Check shipping cost and estimated delivery.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner compares two rice cooker listings and explains which seller looks safer.

Practice Exercise

1. Open the correct app or setting for Rakuten Ichiba Product Search and Reviews.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten Ichiba safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Rakuten Ichiba Product Search and Reviews with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L03 Amazon Japan and Delivery Choices

Learning Objectives

- Understand delivery shopping in daily life.
- Practice Amazon Japan and Delivery Choices slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Amazon Japan and Delivery Choices matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: Prime, delivery date, pickup, seller, return.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Check whether Amazon or a third-party seller is selling the item. Return rules may differ.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Amazon Japan.
2. Search for a safe item.
3. Check seller and shipping source.
4. Check delivery date.
5. Find return policy.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner finds a phone cable and checks whether it is sold by Amazon.co.jp or another seller.

Practice Exercise

1. Open the correct app or setting for Amazon Japan and Delivery Choices.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Amazon Japan safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Amazon Japan and Delivery Choices with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L04 Mercari Buying Basics

Learning Objectives

- Understand buying used goods in daily life.
- Practice Mercari Buying Basics slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Mercari Buying Basics matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: listing, seller rating, condition, shipping included, comment.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Used items need careful reading. Look at photos, description, condition, and seller rating.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Mercari.
2. Search for a simple item.
3. Open a listing.
4. Read item condition.
5. Check seller rating.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner compares two used camera bags on Mercari and identifies missing information.

Practice Exercise

1. Open the correct app or setting for Mercari Buying Basics.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Mercari safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Mercari Buying Basics with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L05 Mercari Selling Basics

Learning Objectives

- Understand selling used goods in daily life.
- Practice Mercari Selling Basics slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Mercari Selling Basics matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: listing, photo, price, shipping method, anonymous delivery.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not share personal address or bank details in comments. Use official Mercari process.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open Sell screen.
2. Take or choose safe item photos.
3. Write a clear title.
4. Choose condition honestly.
5. Choose shipping method.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner drafts a listing for a book with honest condition notes.

Practice Exercise

1. Open the correct app or setting for Mercari Selling Basics.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Mercari safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Mercari Selling Basics with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L06 Payment, Delivery, and Order Tracking

Learning Objectives

- Understand order management in daily life.
- Practice Payment, Delivery, and Order Tracking slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Payment, Delivery, and Order Tracking matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: order history, tracking, delivery notice, invoice, cancel.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Fake delivery SMS is common. Track orders from the shopping app or official delivery site, not SMS links.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open order history in a shopping app.
2. Find order status.
3. Find tracking number.
4. Open official tracking only from app or known site.
5. Check delivery date.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner tracks a practice order and learns not to trust a random “redelivery fee” SMS.

Practice Exercise

1. Open the correct app or setting for Payment, Delivery, and Order Tracking.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Payment, Delivery, and Order Tracking with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L07 Returns, Cancellations, and Customer Support

Learning Objectives

- Understand shopping support in daily life.
- Practice Returns, Cancellations, and Customer Support slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Returns, Cancellations, and Customer Support matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: return, cancel, refund, support chat, policy.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Real support will not ask for passwords or SMS codes. Support may ask for order number, not secret codes.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Find order history.
2. Open help for the order.
3. Read return window.
4. Find contact seller or customer support.
5. Prepare polite message.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner writes a polite message about a damaged item with order number and photo.

Practice Exercise

1. Open the correct app or setting for Returns, Cancellations, and Customer Support.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten Support safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Returns, Cancellations, and Customer Support with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L08 Avoiding Fake Shops and Shopping Scams

Learning Objectives

- Understand shopping safety in daily life.
- Practice Avoiding Fake Shops and Shopping Scams slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Avoiding Fake Shops and Shopping Scams matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: fake shop, too cheap, bank transfer only, company information, URL.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: If a shop accepts only bank transfer and the price is unbelievably low, stop and check carefully.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Look at the shop name and URL.
2. Check company information and contact details.
3. Check payment methods.
4. Search for reviews outside the shop if needed.
5. Avoid buying from suspicious sites.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner sees a luxury bag at 90% off and explains why it is suspicious.

Practice Exercise

1. Open the correct app or setting for Avoiding Fake Shops and Shopping Scams.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Online Shopping safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Avoiding Fake Shops and Shopping Scams with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L09 Managing Addresses, Cards, and Personal Information

Learning Objectives

- Understand personal data safety in daily life.
- Practice Managing Addresses, Cards, and Personal Information slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Managing Addresses, Cards, and Personal Information matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: address book, payment method, card, profile, privacy.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Never upload My Number Card or residence card photos to a shopping seller chat unless an official legal process clearly requires it.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open account settings in a shopping app.
2. Find address book.
3. Check saved payment methods.
4. Remove old addresses if safe.
5. Check privacy and notification settings.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner removes an old delivery address and confirms the current address is correct.

Practice Exercise

1. Open the correct app or setting for Managing Addresses, Cards, and Personal Information.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten Account safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Managing Addresses, Cards, and Personal Information with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16-L10 Online Shopping Review and Senior Buying Routine

Learning Objectives

- Understand complete shopping routine in daily life.
- Practice Online Shopping Review and Senior Buying Routine slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Online Shopping Review and Senior Buying Routine matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Shopping. The goal is calm use, not fast tapping.

Important words: search, compare, cart, checkout, receipt.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not shop when tired, rushed, angry, or scared. Scammers use emotion.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Search product.
2. Compare seller, price, shipping, and reviews.
3. Read return policy.
4. Check total price at checkout.
5. Confirm address and payment method.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner completes a mock purchase checklist without buying anything real.

Practice Exercise

1. Open the correct app or setting for Online Shopping Review and Senior Buying Routine.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Rakuten safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Online Shopping Review and Senior Buying Routine with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M16 Module Review - Online Shopping

Purpose

Review the module slowly. The goal is confidence and safe habits, not speed.

Lesson Review

- M16-L01 Online Shopping Basics and Safe Mindset
- M16-L02 Rakuten Ichiba Product Search and Reviews
- M16-L03 Amazon Japan and Delivery Choices
- M16-L04 Mercari Buying Basics
- M16-L05 Mercari Selling Basics
- M16-L06 Payment, Delivery, and Order Tracking
- M16-L07 Returns, Cancellations, and Customer Support
- M16-L08 Avoiding Fake Shops and Shopping Scams
- M16-L09 Managing Addresses, Cards, and Personal Information
- M16-L10 Online Shopping Review and Senior Buying Routine

Main Safety Ideas

- Open official apps or trusted bookmarks.
- Read the screen title before tapping.
- Stop when money, passwords, PINs, one-time codes, My Number details, or card information appear.
- Do not use links from unexpected SMS, email, or LINE messages.
- Ask trusted help early. Stopping is safety, not failure.

Review Activity

Use three cards: Safe, Check, and Stop. Read examples such as a normal family LINE message, a fake bank SMS, a Rakuten order notice inside the official app, a QR sticker on a public sign, or a support pop-up. The learner chooses a card and explains why.

Confidence Checklist

- I can find the official app.
- I can read before tapping.
- I can stop at a confirmation screen.
- I can protect passwords and codes.
- I can ask for help without shame.

M16 Module Quiz - Online Shopping

1. In Online Shopping Basics and Safe Mindset, what is the safest first action?
2. Why should a learner be careful with Rakuten?
3. In Rakuten Ichiba Product Search and Reviews, what is the safest first action?
4. Why should a learner be careful with Rakuten Ichiba?
5. In Amazon Japan and Delivery Choices, what is the safest first action?
6. Why should a learner be careful with Amazon Japan?
7. In Mercari Buying Basics, what is the safest first action?
8. Why should a learner be careful with Mercari?
9. In Mercari Selling Basics, what is the safest first action?
10. Why should a learner be careful with Mercari?
11. In Payment, Delivery, and Order Tracking, what is the safest first action?
12. Why should a learner be careful with Rakuten?
13. In Returns, Cancellations, and Customer Support, what is the safest first action?
14. Why should a learner be careful with Rakuten Support?
15. In Avoiding Fake Shops and Shopping Scams, what is the safest first action?
16. Why should a learner be careful with Online Shopping?
17. In Managing Addresses, Cards, and Personal Information, what is the safest first action?
18. Why should a learner be careful with Rakuten Account?
19. In Online Shopping Review and Senior Buying Routine, what is the safest first action?
20. Why should a learner be careful with Rakuten?

M16 Practical Assessment - Online Shopping

Goal

The learner demonstrates safe practical use. Safe stopping receives credit.

Safety Rules

- Use demo accounts or supervised real accounts only.
- Do not reveal real passwords, PINs, bank balances, My Number details, or card numbers.
- Do not complete real payments, transfers, purchases, or account changes unless clearly approved.

Tasks

1. Open the correct official app or setting for one lesson task.
2. Read the screen title and explain what the next button does.
3. Find Back, Cancel, Close, or Home.
4. Identify whether the task includes money, personal information, password, PIN, or code.
5. Sort five mock messages into Safe, Check, or Stop.

Rubric

Skill	Pass
Official app	Opens from Home screen, trusted store, or bookmark
Screen reading	Reads title and final button before tapping
Secret protection	Does not share passwords, PINs, or codes
Scam response	Stops and verifies suspicious requests
Confidence	Can ask for help calmly

Teacher Notes

Praise careful checking. Repeat weak tasks with the same example and one new example.

M16 Flashcards - Online Shopping

Use these cards for short daily review. Ask the learner to answer in their own words.

Cards - Front: Official app Back: An app installed from the correct store or opened from a known source. - Front: Stop, Check, Confirm Back: Pause, inspect the request, and verify through a separate trusted channel. - Front: One-time code Back: A temporary secret code. Never share it with another person. - Front: Confirmation screen Back: The screen where you check details before final action. - Front: Phishing Back: A fake message or site that tries to steal information. - Front: Smishing Back: Phishing through SMS text message. - Front: QR scam Back: A QR code that sends you to a fake or dangerous site. - Front: Tech support scam Back: A fake helper who tries to get money, codes, or remote control. - Front: Bank transfer safety Back: Check bank name, branch, account number, recipient, amount, and fee. - Front: My Number safety Back: Use official government services and protect My Number Card details. - Front: Rakuten Back: Practice example for Online Shopping Basics and Safe Mindset: shopping basics. - Front: M16-L01 Back: Main lesson: Online Shopping Basics and Safe Mindset. - Front: Rakuten Ichiba Back: Practice

M16 Cheat Sheet - Online Shopping

Universal Routine

1. Open the official app or trusted bookmark.
2. Read the screen title.
3. Check person, amount, link, password, PIN, code, or permission.
4. Stop if anything feels strange.
5. Close the app and lock the phone.

Red Flags

- Urgent messages: today, final notice, account locked, unpaid, police, refund.
- Requests for password, PIN, SMS code, one-time password, My Number Card photo, or cash card details.
- Money request from someone who refuses a normal phone call.
- QR sticker placed over another QR code.
- Support person asking for remote control.
- Bank transfer requested to fix a problem or receive a prize.

Safe Alternatives

- Use LINE only with known contacts.
- Use PayPay, Rakuten, Mercari, and bank apps from the Home screen.
- Use official bank phone numbers from bank cards or official websites.
- Use Mynaportal/My Number services only from official apps and official guidance.

Lesson Map - M16-L01 Online Shopping Basics and Safe Mindset - M16-L02 Rakuten Ichiba Product Search and Reviews - M16-L03 Amazon Japan and Delivery Choices - M16-L04 Mercari Buying Basics - M16-L05 Mercari Selling Basics - M16-L06 Payment, Delivery, and Order Tracking - M16-L07 Returns, Cancellations, and Customer Support

M17 Cybersecurity

M17-L01 Senior Cybersecurity Mindset

Learning Objectives

- Understand safe thinking in daily life.
- Practice Senior Cybersecurity Mindset slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Senior Cybersecurity Mindset matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: scam, phishing, verification, privacy, trust.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Security begins with pause. You are allowed to ignore, delete, or verify unexpected requests.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Learn the Stop, Check, Confirm rule.
2. Identify pressure words such as urgent, today only, account locked, unpaid, police, or refund.
3. Practice saying no politely.
4. Choose a trusted helper list.
5. Write emergency phone numbers separately.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: A message says “Your account will close today.” The learner stops and opens the official app instead of tapping.

Practice Exercise

1. Open the correct app or setting for Senior Cybersecurity Mindset.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Cybersecurity safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Senior Cybersecurity Mindset with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L02 Passwords, PINs, and Passkeys

Learning Objectives

- Understand account security in daily life.
- Practice Passwords, PINs, and Passkeys slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Passwords, PINs, and Passkeys matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: password, PIN, passkey, password manager, reuse.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not reuse the same password for shopping, banking, and email. One stolen password can open many doors.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. List account types without writing passwords.
2. Learn what makes a password strong.
3. Turn on password manager if supported.
4. Practice making a passphrase.
5. Identify which codes must never be shared.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: The learner creates a practice passphrase from words, not a real password, and learns why birthdays are weak.

Practice Exercise

1. Open the correct app or setting for Passwords, PINs, and Passkeys.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Password Manager safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Passwords, PINs, and Passkeys with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L03 Two-Factor Authentication and SMS Codes

Learning Objectives

- Understand login protection in daily life.
- Practice Two-Factor Authentication and SMS Codes slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Two-Factor Authentication and SMS Codes matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: 2FA, SMS code, one-time password, authenticator, approval prompt.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A real support worker does not need your one-time code. The code is for your device only.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Trigger a safe demo sign-in if possible.
2. Receive or view a code.
3. Read the service name.
4. Enter it only into the app you started.
5. Reject unexpected login prompts.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A caller asks for a 6-digit code. The learner says, "I cannot share codes," and hangs up.

Practice Exercise

1. Open the correct app or setting for Two-Factor Authentication and SMS Codes.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Authentication safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Two-Factor Authentication and SMS Codes with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L04 Scam SMS and Delivery Smishing

Learning Objectives

- Understand smishing defense in daily life.
- Practice Scam SMS and Delivery Smishing slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Scam SMS and Delivery Smishing matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: smishing, delivery notice, redelivery, short URL, malware.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Many delivery scam SMS messages use fear or convenience. Official tracking is safer than SMS links.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open a practice SMS screenshot.
2. Find sender name or phone number.
3. Look for pressure or strange URL.
4. Do not tap the link.
5. Open official delivery app/site separately if checking.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: “Package redelivery fee unpaid” arrives. The learner checks the shopping app order history instead.

Practice Exercise

1. Open the correct app or setting for Scam SMS and Delivery Smishing.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use SMS safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Scam SMS and Delivery Smishing with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L05 Scam Emails and Fake Login Pages

Learning Objectives

- Understand phishing email defense in daily life.
- Practice Scam Emails and Fake Login Pages slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Scam Emails and Fake Login Pages matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: phishing, sender, link preview, attachment, fake login.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A fake email can use a real logo. Logos are easy to copy. Behavior is more important than design.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open a practice email screenshot.
2. Check sender address.
3. Read greeting and pressure words.
4. Hover or long-press link only in teacher demo, not on real suspicious mail.
5. Do not open attachments.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: An email says Rakuten points will expire unless you log in. The learner opens Rakuten app directly instead.

Practice Exercise

1. Open the correct app or setting for Scam Emails and Fake Login Pages.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Email safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Scam Emails and Fake Login Pages with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L06 QR Code Scams and Safe Scanning

Learning Objectives

- Understand QR scam defense in daily life.
- Practice QR Code Scams and Safe Scanning slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

QR Code Scams and Safe Scanning matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: QR code, quishing, scan, URL preview, sticker.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not scan random QR stickers placed over official signs. A QR code is just a hidden link.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Look at the QR code location.
2. Check whether it is printed cleanly or stuck on top.
3. Scan only when the place is trusted.
4. Read URL preview before opening.
5. Cancel if it asks for card or login unexpectedly.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A QR sticker on a parking meter looks newly pasted. The learner chooses not to scan and asks staff.

Practice Exercise

1. Open the correct app or setting for QR Code Scams and Safe Scanning.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use QR Codes safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced QR Code Scams and Safe Scanning with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L07 Tech Support Scams and Remote Control Danger

Learning Objectives

- Understand tech support defense in daily life.
- Practice Tech Support Scams and Remote Control Danger slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Tech Support Scams and Remote Control Danger matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: pop-up, remote support, gift card, bank transfer, support number.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Never let an unknown caller remotely control your phone or computer. Remote control can expose banking and photos.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Recognize fake virus pop-ups.
2. Do not call numbers shown in scary pop-ups.
3. Close browser or restart device.
4. Never install remote control apps for strangers.
5. Contact official support through known channels.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A loud browser page says “Your iPhone is infected.” The learner closes the tab and asks a trusted person.

Practice Exercise

1. Open the correct app or setting for Tech Support Scams and Remote Control Danger.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Support Scam safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Tech Support Scams and Remote Control Danger with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L08 Banking Fraud and Money Transfer Scams

Learning Objectives

- Understand bank fraud defense in daily life.
- Practice Banking Fraud and Money Transfer Scams slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Banking Fraud and Money Transfer Scams matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: bank transfer, cash card PIN, one-time password, mule account, fraud desk.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Banks, police, and city offices do not ask you to transfer money to “protect” it. That is a scam pattern.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Learn common bank fraud stories.
2. Check request source.
3. Never share PIN or one-time password.
4. Call official bank number on card or website.
5. If money was sent, contact bank and police quickly.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: Someone says your account is hacked and asks you to move money. The learner calls the bank directly.

Practice Exercise

1. Open the correct app or setting for Banking Fraud and Money Transfer Scams.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Online Banking safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Banking Fraud and Money Transfer Scams with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L09 AI Scams, Voice Cloning, and Deepfake Video

Learning Objectives

- Understand AI scam awareness in daily life.
- Practice AI Scams, Voice Cloning, and Deepfake Video slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

AI Scams, Voice Cloning, and Deepfake Video matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: deepfake, voice clone, AI message, secret word, verification call.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A voice can be fake. A video can be fake. Use a family secret word and call back using the real saved number.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Learn how AI can copy writing style, voice, or face.
2. Create a family verification phrase.
3. Practice responding to urgent money requests.
4. Call back using saved contact, not the incoming call link.
5. Report suspicious impersonation.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A “grandchild” voice asks for money after an accident. The learner asks the secret question and calls the saved number.

Practice Exercise

1. Open the correct app or setting for AI Scams, Voice Cloning, and Deepfake Video.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use AI Scam safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced AI Scams, Voice Cloning, and Deepfake Video with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L10 LINE Safety, Privacy, and Friend Requests

Learning Objectives

- Understand messaging safety in daily life.
- Practice LINE Safety, Privacy, and Friend Requests slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

LINE Safety, Privacy, and Friend Requests matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: friend request, timeline, group invite, block, report.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not add unknown accounts just because they use a friendly photo or familiar name.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open LINE settings.
2. Review privacy settings.
3. Check friend requests.
4. Block a practice unknown account if safe.
5. Review group invite settings.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A fake account uses a family member photo. The learner calls the real family member before replying.

Practice Exercise

1. Open the correct app or setting for LINE Safety, Privacy, and Friend Requests.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use LINE safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced LINE Safety, Privacy, and Friend Requests with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L11 Smartphone Malware, App Permissions, and Updates

Learning Objectives

- Understand malware prevention in daily life.
- Practice Smartphone Malware, App Permissions, and Updates slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Smartphone Malware, App Permissions, and Updates matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: malware, permission, update, unknown app, security patch.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Malware often enters through fake apps, unsafe links, or unnecessary permissions.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open app permissions.
2. Check which apps can use camera, microphone, and location.
3. Remove apps not used if safe.
4. Check system updates.
5. Avoid installing APK files or configuration profiles from strangers.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A flashlight app asks for contacts and SMS. The learner explains why that is suspicious.

Practice Exercise

1. Open the correct app or setting for Smartphone Malware, App Permissions, and Updates.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Phone Security safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Smartphone Malware, App Permissions, and Updates with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L12 Public Wi-Fi, Bluetooth, and Travel Security

Learning Objectives

- Understand network safety in daily life.
- Practice Public Wi-Fi, Bluetooth, and Travel Security slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Public Wi-Fi, Bluetooth, and Travel Security matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: public Wi-Fi, VPN, Bluetooth, hotspot, HTTPS.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Avoid banking on public Wi-Fi. If urgent, use mobile data or a trusted network.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Identify trusted and unknown networks.
2. Turn off auto-join for unknown Wi-Fi.
3. Turn off Bluetooth when not needed.
4. Check website lock icon for normal browsing.
5. Use mobile data for banking.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: At a cafe, the learner wants to check MUFG. The safer choice is mobile data, not unknown free Wi-Fi.

Practice Exercise

1. Open the correct app or setting for Public Wi-Fi, Bluetooth, and Travel Security.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Network Security safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Public Wi-Fi, Bluetooth, and Travel Security with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L13 Privacy, Personal Information, and My Number Safety

Learning Objectives

- Understand personal information protection in daily life.
- Practice Privacy, Personal Information, and My Number Safety slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Privacy, Personal Information, and My Number Safety matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: personal information, My Number, identity theft, document photo, consent.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: My Number information is sensitive. Use official government apps and offices, not random links.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Learn what personal information means.
2. Identify sensitive documents.
3. Avoid sending document photos in chats.
4. Use official Mynaportal app or city office guidance.
5. Ask why information is needed before sharing.
6. Close the app or return to the Home screen when finished.

7. Lock the phone before putting it away.

Guided Example

Example: A message says My Number was used illegally and asks for card photos. The learner does not reply and checks official channels.

Practice Exercise

1. Open the correct app or setting for Privacy, Personal Information, and My Number Safety.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Privacy safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.

6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Privacy, Personal Information, and My Number Safety with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17-L14 Cybersecurity Emergency Response Plan

Learning Objectives

- Understand recovery after trouble in daily life.
- Practice Cybersecurity Emergency Response Plan slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Cybersecurity Emergency Response Plan matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Cybersecurity. The goal is calm use, not fast tapping.

Important words: incident, freeze account, report, evidence, recovery.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Fast reporting can reduce damage. Shame is not useful. Action is useful.

Cybersecurity rule: criminals use fear, urgency, fake kindness, and fake authority. Stop before tapping links, sharing codes, sending money, or installing apps.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Stop using the suspicious link or app.
2. Take screenshots if safe.
3. Change password from another safe device if needed.
4. Call bank/card company using official number.
5. Report to police or consumer center.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner entered a password on a fake site. The class practices the first 30 minutes response checklist.

Practice Exercise

1. Open the correct app or setting for Cybersecurity Emergency Response Plan.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Incident Response safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Cybersecurity Emergency Response Plan with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M17 Module Review - Cybersecurity

Purpose

Review the module slowly. The goal is confidence and safe habits, not speed.

Lesson Review

- M17-L01 Senior Cybersecurity Mindset
- M17-L02 Passwords, PINs, and Passkeys
- M17-L03 Two-Factor Authentication and SMS Codes
- M17-L04 Scam SMS and Delivery Smishing
- M17-L05 Scam Emails and Fake Login Pages
- M17-L06 QR Code Scams and Safe Scanning
- M17-L07 Tech Support Scams and Remote Control Danger
- M17-L08 Banking Fraud and Money Transfer Scams
- M17-L09 AI Scams, Voice Cloning, and Deepfake Video
- M17-L10 LINE Safety, Privacy, and Friend Requests
- M17-L11 Smartphone Malware, App Permissions, and Updates
- M17-L12 Public Wi-Fi, Bluetooth, and Travel Security
- M17-L13 Privacy, Personal Information, and My Number Safety
- M17-L14 Cybersecurity Emergency Response Plan

Main Safety Ideas

- Open official apps or trusted bookmarks.
- Read the screen title before tapping.
- Stop when money, passwords, PINs, one-time codes, My Number details, or card information appear.
- Do not use links from unexpected SMS, email, or LINE messages.
- Ask trusted help early. Stopping is safety, not failure.

Review Activity

Use three cards: Safe, Check, and Stop. Read examples such as a normal family LINE message, a fake bank SMS, a Rakuten order notice inside the official app, a QR sticker on a public sign, or a support pop-up. The learner chooses a card and explains why.

Confidence Checklist - I can find the official app. -

M17 Module Quiz - Cybersecurity

1. In Senior Cybersecurity Mindset, what is the safest first action?
2. Why should a learner be careful with Cybersecurity?
3. In Passwords, PINs, and Passkeys, what is the safest first action?
4. Why should a learner be careful with Password Manager?
5. In Two-Factor Authentication and SMS Codes, what is the safest first action?
6. Why should a learner be careful with Authentication?
7. In Scam SMS and Delivery Smishing, what is the safest first action?
8. Why should a learner be careful with SMS?
9. In Scam Emails and Fake Login Pages, what is the safest first action?
10. Why should a learner be careful with Email?
11. In QR Code Scams and Safe Scanning, what is the safest first action?
12. Why should a learner be careful with QR Codes?
13. In Tech Support Scams and Remote Control Danger, what is the safest first action?
14. Why should a learner be careful with Support Scam?
15. In Banking Fraud and Money Transfer Scams, what is the safest first action?
16. Why should a learner be careful with Online Banking?
17. In AI Scams, Voice Cloning, and Deepfake Video, what is the safest first action?
18. Why should a learner be careful with AI Scam?
19. In LINE Safety, Privacy, and Friend Requests, what is the safest first action?
20. Why should a learner be careful with LINE?

M17 Practical Assessment - Cybersecurity

Goal

The learner demonstrates safe practical use. Safe stopping receives credit.

Safety Rules

- Use demo accounts or supervised real accounts only.
- Do not reveal real passwords, PINs, bank balances, My Number details, or card numbers.
- Do not complete real payments, transfers, purchases, or account changes unless clearly approved.

Tasks

1. Open the correct official app or setting for one lesson task.
2. Read the screen title and explain what the next button does.
3. Find Back, Cancel, Close, or Home.
4. Identify whether the task includes money, personal information, password, PIN, or code.
5. Sort five mock messages into Safe, Check, or Stop.

Rubric

Skill	Pass
Official app	Opens from Home screen, trusted store, or bookmark
Screen reading	Reads title and final button before tapping
Secret protection	Does not share passwords, PINs, or codes
Scam response	Stops and verifies suspicious requests
Confidence	Can ask for help calmly

Teacher Notes

Praise careful checking. Repeat weak tasks with the same example and one new example.

M17 Flashcards - Cybersecurity

Use these cards for short daily review. Ask the learner to answer in their own words.

Cards - Front: Official app Back: An app installed from the correct store or opened from a known source. - Front: Stop, Check, Confirm Back: Pause, inspect the request, and verify through a separate trusted channel. - Front: One-time code Back: A temporary secret code. Never share it with another person. - Front: Confirmation screen Back: The screen where you check details before final action. - Front: Phishing Back: A fake message or site that tries to steal information. - Front: Smishing Back: Phishing through SMS text message. - Front: QR scam Back: A QR code that sends you to a fake or dangerous site. - Front: Tech support scam Back: A fake helper who tries to get money, codes, or remote control. - Front: Bank transfer safety Back: Check bank name, branch, account number, recipient, amount, and fee. - Front: My Number safety Back: Use official government services and protect My Number Card details. - Front: Cybersecurity Back: Practice example for Senior Cybersecurity Mindset: safe thinking. - Front: M17-L01 Back: Main lesson: Senior Cybersecurity Mindset. - Front: Password Manager Back: Practice example for Passwords, PINs, and Passkeys:

M17 Cheat Sheet - Cybersecurity

Universal Routine

1. Open the official app or trusted bookmark.
2. Read the screen title.
3. Check person, amount, link, password, PIN, code, or permission.
4. Stop if anything feels strange.
5. Close the app and lock the phone.

Red Flags

- Urgent messages: today, final notice, account locked, unpaid, police, refund.
- Requests for password, PIN, SMS code, one-time password, My Number Card photo, or cash card details.
- Money request from someone who refuses a normal phone call.
- QR sticker placed over another QR code.
- Support person asking for remote control.
- Bank transfer requested to fix a problem or receive a prize.

Safe Alternatives

- Use LINE only with known contacts.
- Use PayPay, Rakuten, Mercari, and bank apps from the Home screen.
- Use official bank phone numbers from bank cards or official websites.
- Use Mynaportal/My Number services only from official apps and official guidance.

Lesson Map - M17-L01 Senior Cybersecurity Mindset - M17-L02 Passwords, PINs, and Passkeys - M17-L03 Two-Factor Authentication and SMS Codes - M17-L04 Scam SMS and Delivery Smishing - M17-L05 Scam Emails and Fake Login Pages - M17-L06 QR Code Scams and Safe Scanning - M17-L07 Tech Support Scams and

M17 Cybersecurity Scam Defense Playbook

Purpose

This playbook gives extra detail for teachers, family helpers, and senior learners after M17 lessons. It is written for Japan-based daily life. It focuses on simple recognition and safe response, not technical hacking.

The safest pattern is Stop, Check, Confirm:

1. Stop when the message creates fear, urgency, surprise money, refund, punishment, romance, family emergency, or account trouble.
2. Check the request. Is it asking for money, password, PIN, SMS code, one-time password, card number, My Number information, remote control, or an app install?
3. Confirm using another trusted path. Open the official app yourself, call the saved family number, call the bank number printed on the card, or visit the branch/city office.

Scam SMS Detailed Guide

Scam SMS is also called smishing. Seniors often receive fake delivery messages, fake unpaid tax messages, fake bank messages, fake credit card messages, fake pension messages, and fake payment app messages.

Common signs:

- The message says a package cannot be delivered, but the learner did not order anything.
- The link is short, strange, or not the normal company website.
- The message says payment is needed now.
- The message says an account will stop today.
- The message asks the learner to install an app from outside the official store.
- The message asks for SMS verification code or one-time password.

Safe response:

1. Do not tap the link.
2. Do not reply.
3. Open the shopping app or delivery app separately.
4. If the learner expects a package, check the order history inside Rakuten, Amazon Japan, Mercari, or the official delivery site.
5. Delete or report the SMS after confirming it is not needed.

Japan example: a fake Japan Post, Yamato, or Sagawa SMS may say redelivery is required. The learner should check from the official order history or official delivery site, not from the SMS link.

Scam Email Detailed Guide

Scam emails can look professional. They may include correct logos, Japanese text, and official-looking buttons. Modern scam emails may be written by AI, so spelling mistakes are no longer a reliable warning sign.

Common signs:

- The sender address is slightly strange.

- The email creates urgency: “Your account will be suspended.”
- The button goes to a login page.
- The email asks for credit card number, password, 3D Secure information, or one-time password.
- The attachment is unexpected.
- The message says a reward, refund, or points will disappear unless the learner logs in.

Safe response:

1. Do not press the email button.
2. Do not open unexpected attachments.
3. Open the official app directly, such as Rakuten, Mercari, PayPay, MUFG, SMBC, or Japan Post Bank.
4. Check notifications inside the official app.
5. Report phishing if the app or email provider supports it.

Japan example: a fake Rakuten or Mercari email may say there is an account problem. The learner should open the official app directly and check notices there.

QR Scam Detailed Guide

A QR code is a hidden link. It can open a safe website or a dangerous website. A criminal may print a fake QR code and place it over a real one on a poster, payment sign, restaurant table, parking sign, or event flyer.

Common signs:

- The QR code is a sticker placed on top of another code.
- The QR code is in a public place with no staff nearby.
- The screen after scanning asks for card details unexpectedly.
- The page asks the learner to log in to a bank, payment app, or email account.
- The URL preview looks unrelated to the place.

Safe response:

1. Look at the physical QR code before scanning.
2. Do not scan codes that look pasted over.
3. Read the URL preview before opening.
4. If payment is involved, ask staff or use the official app.
5. If the page asks for card information unexpectedly, close it.

Japan example: PayPay QR payment at a store should show a normal store payment flow. A random QR sticker on a wall should not be trusted.

Tech Support Scam Detailed Guide

A tech support scam pretends that the phone or computer has a virus, serious error, or legal problem. The scammer wants the learner to call a number, buy gift cards, transfer money, install remote control software, or reveal codes.

Common signs:

- A browser page makes a loud warning sound.
- A pop-up says “Do not close this window.”
- A phone caller says they are from Microsoft, Apple, Google, police, bank, or security center.

- The person asks to install AnyDesk, TeamViewer, remote support software, or a configuration profile.
- The person asks the learner to open online banking while screen sharing.
- The person asks for gift cards, convenience store payment, or bank transfer.

Safe response:

1. Do not call the number shown in the warning.
2. Close the browser tab or restart the device.
3. Do not install remote control apps for strangers.
4. Do not open banking while someone is watching the screen.
5. Ask a trusted family member, teacher, or official support channel.

Banking Fraud Detailed Guide

Banking fraud often uses fear and authority. The scammer may pretend to be a bank employee, police officer, city office worker, delivery company, credit card company, or family member.

Common stories:

- “Your account is hacked. Move your money to a safe account.”
- “Your cash card must be replaced. Tell me the PIN.”
- “A refund is available. Go to the ATM.”
- “Your bank account is frozen. Login from this link.”
- “Your son/daughter/grandchild needs money now.”
- “You must pay tax, pension, or legal fee today.”

Safe response:

1. Do not share cash card PIN, online banking password, one-time password, or SMS code.
2. Do not transfer money because of a call or message.
3. Call the bank using the number on the bank card or official website.
4. For family emergency money requests, call the person using the saved number.
5. If money was sent, contact the bank immediately and then police.

AI Scam and Deepfake Detailed Guide

AI can make scam messages more believable. It can write natural Japanese, copy a person’s writing style, clone a voice, create a fake photo, or make a fake video. Seniors should not rely only on “I recognize the voice” or “the message sounds normal.”

Common signs:

- A family member suddenly asks for money and says they cannot talk normally.
- A voice call sounds like a family member but avoids personal questions.
- A video is short, emotional, and pushes immediate payment.
- The caller asks to keep the situation secret.
- The person refuses a normal callback.

Safe family rule:

- Create a family secret phrase or question.
- Do not use obvious answers such as birthday, pet name, or address.
- If an emergency request comes, call back using the saved contact.

- If the caller says “do not call anyone,” treat that as a red flag.
- Agree that no family member will be angry if the senior verifies first.

Example family phrase method:

1. Choose a private phrase such as “blue rice cooker.”
2. Teach trusted family that money requests require the phrase.
3. If a strange call happens, ask for the phrase.
4. Still call back using the saved number before sending money.

My Number Card and Government Service Safety

My Number Card and Mynaportal are useful, but the information is sensitive. A scam may say the learner’s My Number was misused, tax is unpaid, insurance is blocked, or government points are expiring.

Safe response:

1. Do not open government links from strange SMS or email.
2. Use the official Mynaportal app or official city office guidance.
3. Do not send My Number Card photos in chat.
4. Do not reveal My Number PIN to another person.
5. If unsure, call the city office or official My Number support number from trusted sources.

Family Helper Rules

Family helpers should protect dignity. Do not take the phone away unless there is immediate danger. Let the senior do safe steps while the helper watches.

Good helper behavior:

- Sit beside the learner, not above them.
- Ask, “What do you see?” before touching the phone.
- Do not ask the learner to say passwords aloud.
- Teach the reason, not only the tap.
- Praise stopping and checking.
- Write simple steps without secrets.

Bad helper behavior:

- Rushing.
- Laughing at mistakes.
- Taking over every task.
- Saving passwords in unsafe places.
- Teaching shortcuts before safety.

Emergency Response Checklist

Use this when the learner may have tapped a scam link, entered information, installed an app, sent money, or shared a code.

First 5 minutes:

1. Stop using the suspicious page or app.
2. Disconnect from the scammer. Hang up if needed.
3. Do not delete messages yet if they are evidence.

4. Screenshot the message if safe.
5. Tell a trusted person.

First 30 minutes:

1. If banking or payment is involved, contact the bank, card company, or payment app from official contact information.
2. If a password was entered, change it from a safe device.
3. If the same password was used elsewhere, change those accounts too.
4. If remote control software was installed, disconnect internet and get trusted technical help.
5. If money was sent, ask the bank about stopping or tracing the transfer.

Same day:

1. Report to police consultation #9110 or local police if fraud may have happened.
2. Report phishing to the related service if possible.
3. Check bank and payment history.
4. Watch for follow-up scams. Criminals may call again pretending to help recover money.
5. Review the lesson calmly. Do not blame the learner.

Teacher Practice Scenarios

Use these short scenarios for class. Ask the learner to answer Safe, Check, or Stop.

1. A known daughter sends a normal LINE photo from her usual account.
2. An SMS says Japan Post redelivery requires a small fee today.
3. A PayPay screen inside the official app shows normal payment history.
4. A caller says they are police and asks for cash card PIN.
5. A QR code sticker is placed over a restaurant menu QR.
6. A fake Microsoft warning tells the learner to call a phone number.
7. A grandchild voice asks for money and says not to tell parents.
8. A Rakuten email asks the learner to login from a button to keep points.
9. The official bank app asks for Face ID after the learner opened it.
10. A Mercari seller asks for bank transfer outside Mercari.

Suggested answers: 1 Safe, 2 Stop, 3 Safe/Check, 4 Stop, 5 Stop, 6 Stop, 7 Stop, 8 Stop, 9 Safe/Check, 10 Stop.

Final Rule

The senior learner should remember this sentence:

“I do not need to prove I am fast. I need to protect myself.”

M18 Online Banking

M18-L01 Online Banking Basics in Japan

Learning Objectives

- Understand banking basics in daily life.
- Practice Online Banking Basics in Japan slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Online Banking Basics in Japan matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: balance, transfer, statement, login, branch.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Online banking is convenient, but it must be used slowly. Money screens need double checking.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Compare ATM, branch, and online banking.
2. Open a demo or official banking app if available.
3. Find balance screen.
4. Find statement/history.
5. Close without transferring money.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks a sample balance screen and identifies available balance and transaction history.

Practice Exercise

1. Open the correct app or setting for Online Banking Basics in Japan.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Online Banking safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Online Banking Basics in Japan with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L02 Setting Up Banking Apps Safely

Learning Objectives

- Understand bank app setup in daily life.
- Practice Setting Up Banking Apps Safely slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Setting Up Banking Apps Safely matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: app store, identity verification, cash card, initial password, terms.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Install bank apps only from official app stores or bank pages. Do not use links from SMS.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Search the bank app in official store.
2. Check developer name.
3. Read setup requirements.
4. Prepare cash card and documents only if needed.
5. Do setup in a quiet place.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner checks the official MUFG app listing and learns to avoid fake search ads.

Practice Exercise

1. Open the correct app or setting for Setting Up Banking Apps Safely.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Bank App safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Setting Up Banking Apps Safely with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L03 Logging In, Authentication, and One-Time Passwords

Learning Objectives

- Understand secure login in daily life.
- Practice Logging In, Authentication, and One-Time Passwords slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Logging In, Authentication, and One-Time Passwords matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: login ID, password, one-time password, token, biometrics.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: One-time passwords protect transfers. Never read them to another person.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open the banking app directly.
2. Enter login method if practicing with demo.
3. Read authentication prompt.
4. Approve only if you started the login.
5. Log out or close app after use.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner receives an unexpected login approval and chooses Reject.

Practice Exercise

1. Open the correct app or setting for Logging In, Authentication, and One-Time Passwords.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Online Banking safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Logging In, Authentication, and One-Time Passwords with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L04 Checking Balance and Transaction History

Learning Objectives

- Understand account checking in daily life.
- Practice Checking Balance and Transaction History slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Checking Balance and Transaction History matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: balance, available balance, deposit, withdrawal, memo.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Checking history helps catch fraud early. Small unknown payments matter too.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open the bank app.
2. Find balance.
3. Open transaction history.
4. Read dates and amounts.
5. Mark unknown transactions for checking.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner reviews five sample transactions and identifies salary, shopping, ATM withdrawal, and unknown item.

Practice Exercise

1. Open the correct app or setting for Checking Balance and Transaction History.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Bank App safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Checking Balance and Transaction History with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L05 Domestic Transfers and Furikomi Safety

Learning Objectives

- Understand bank transfer safety in daily life.
- Practice Domestic Transfers and Furikomi Safety slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Domestic Transfers and Furikomi Safety matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: furikomi, recipient, branch code, account number, fee.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A bank transfer is serious. Wrong transfers can be hard to cancel.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open transfer screen only for practice.
2. Enter no real account unless supervised.
3. Check bank name, branch, account type, account number, recipient name.
4. Check fee and amount.
5. Stop at confirmation screen.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner practices reading a transfer confirmation and finds the recipient name before confirming.

Practice Exercise

1. Open the correct app or setting for Domestic Transfers and Furikomi Safety.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Furikomi safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Domestic Transfers and Furikomi Safety with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L06 Paying Bills, Taxes, and Public Fees Online

Learning Objectives

- Understand bill payment in daily life.
- Practice Paying Bills, Taxes, and Public Fees Online slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Paying Bills, Taxes, and Public Fees Online matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: Pay-easy, bill number, tax notice, deadline, receipt.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Scammers copy tax and pension notices. Pay from official bank app or official government instructions.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Look at a sample bill.
2. Find payment number and deadline.
3. Open official bank bill payment area.
4. Enter sample numbers only.
5. Check receipt storage.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner reads a sample resident tax notice and identifies which information should be entered.

Practice Exercise

1. Open the correct app or setting for Paying Bills, Taxes, and Public Fees Online.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Online Banking safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Paying Bills, Taxes, and Public Fees Online with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L07 Cards, ATMs, and Online Banking Together

Learning Objectives

- Understand ATM and online banking connection in daily life.
- Practice Cards, ATMs, and Online Banking Together slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Cards, ATMs, and Online Banking Together matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: cash card, PIN, ATM, daily limit, lost card.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Your cash card PIN is private. Bank staff do not need to know it.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Review cash card safety.
2. Learn daily transfer limits.
3. Learn how ATM and app history connect.
4. Find lost card contact method.
5. Write bank emergency number in paper contacts.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner imagines losing a card and practices which official number to call.

Practice Exercise

1. Open the correct app or setting for Cards, ATMs, and Online Banking Together.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Banking safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.

9. Close the app or sign out if needed, then lock the phone.

10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Cards, ATMs, and Online Banking Together with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L08 Bank Fraud Alerts and Official Contact Methods

Learning Objectives

- Understand bank warnings in daily life.
- Practice Bank Fraud Alerts and Official Contact Methods slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Bank Fraud Alerts and Official Contact Methods matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: fraud alert, official number, call back, account freeze, phishing.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Do not trust a phone number inside a suspicious message. Use the bank card, bank app, or official website.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Find official contact in bank app or card.
2. Recognize fake urgent alerts.
3. Practice calling back safely.
4. Learn when to freeze card/account.
5. Save official number if appropriate.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: A message says “SMBC account locked.” The learner opens SMBC app directly or calls official number.

Practice Exercise

1. Open the correct app or setting for Bank Fraud Alerts and Official Contact Methods.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Bank Security safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Bank Fraud Alerts and Official Contact Methods with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L09 Online Banking for Family Support and Caregivers

Learning Objectives

- Understand safe help from family in daily life.
- Practice Online Banking for Family Support and Caregivers slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Online Banking for Family Support and Caregivers matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: caregiver, permission, power of attorney, privacy, support.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: Family help must still respect privacy and legal rules. Do not casually share login details.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Decide who is trusted for support.
2. Create rules for helping without sharing passwords.
3. Use speakerphone only with trusted people.
4. Visit bank branch for formal support options.
5. Keep records of support actions.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: An adult child helps check a screen, but the senior types the password privately.

Practice Exercise

1. Open the correct app or setting for Online Banking for Family Support and Caregivers.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Family Support safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.
7. No. Passwords and security codes must stay private.

8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Online Banking for Family Support and Caregivers with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18-L10 Online Banking Review and Monthly Safety Routine

Learning Objectives

- Understand monthly banking routine in daily life.
- Practice Online Banking Review and Monthly Safety Routine slowly and safely.
- Know when to stop, check, and ask for trusted help.

Why This Matters

Online Banking Review and Monthly Safety Routine matters because seniors use phones for family, shopping, payments, banking, travel, and government services in Japan. A simple routine protects money, privacy, photos, LINE messages, bank accounts, and confidence.

Prerequisites

- A charged phone or practice device.
- Wi-Fi or mobile data is available.
- A notebook is ready for step notes, but not for passwords or secret codes.

Lesson Content

This lesson is part of Online Banking. The goal is calm use, not fast tapping.

Important words: monthly check, statement, unknown transaction, backup contact, safe logout.

Use the senior rule: look first, then tap. Read the app name, screen title, amount, person, or setting before continuing.

Safety note: A monthly routine catches mistakes early and builds confidence.

Visual Explanation

Phone safety flow:

1. Open the official app.
2. Read the screen title.
3. Check details: person, amount, link, code, or permission.
4. Confirm only when you are sure.
5. Close and lock the phone when finished.

Step-by-Step Instructions

1. Open bank app from Home screen.
2. Check balance and history.
3. Confirm no unknown transfers.
4. Check registered phone/email.
5. Review transfer limit.
6. Close the app or return to the Home screen when finished.
7. Lock the phone before putting it away.

Guided Example

Example: The learner completes a monthly banking checklist and writes “checked” in a notebook without writing balances.

Practice Exercise

1. Open the correct app or setting for Online Banking Review and Monthly Safety Routine.
2. Point to the screen title and read it out loud.
3. Find Back, Cancel, Close, or Home.
4. Repeat once more slowly and say what you checked.

Challenge Exercise

Explain the task to another person before touching the phone. If money, personal information, or a code appears, stop at the confirmation screen and explain why it is important.

Common Mistakes

- Tapping too fast because the screen feels familiar.
- Pressing a blue or red button without reading the words.
- Opening a service from a link in SMS or email instead of the official app.
- Sharing a password, PIN, SMS code, or one-time code with another person.

Troubleshooting

- If the app will not open, check battery, internet connection, and whether the phone needs an update. - If the screen is different from the lesson, look for similar words such as Settings, Account, Help, or Search. - If the text is too small, increase text size in accessibility settings or use screen zoom. - If a code does not arrive, wait a few minutes and check the phone number.

Memory Reinforcement

- Say the action out loud: 'I am opening the official app.'
- Use the three-check habit: app name, screen title, final button.
- Practice the same task three times on different days.

Quick Notes

- Slow is safe.
- Official app is safer than message links.
- Passwords and codes are private.
- When money is involved, confirm twice.
- A strange screen is a reason to stop, not a reason to hurry.

Quiz Answers

1. To use Online Banking safely and confidently for daily life.
2. No. Stop, read slowly, and check before tapping.
3. Check that you are using the official app or official website.
4. Read the screen one more time and confirm the name, amount, or setting.
5. Do not continue. Ask a trusted person or contact the official support channel.
6. Practice builds memory and reduces fear.

7. No. Passwords and security codes must stay private.
8. Open the official app, a saved bookmark, or type the known address yourself.
9. Close the app or sign out if needed, then lock the phone.
10. Slow is safe. Do one step at a time.

Flashcards

- Front: Slow is safe

Back: Take time to read before tapping.

- Front: Official app

Back: The app installed from Google Play, App Store, or the service provider.

- Front: Confirmation screen

Back: The final screen that asks you to check details before continuing.

- Front: SMS code

Back: A temporary code that must not be shared.

- Front: Back button

Back: A safe way to leave the current screen without continuing.

Summary

The learner practiced Online Banking Review and Monthly Safety Routine with a slow safety routine: open the official place, read the screen, check details, stop if unsure, and lock the phone after use.

M18 Module Review - Online Banking

Purpose

Review the module slowly. The goal is confidence and safe habits, not speed.

Lesson Review

- M18-L01 Online Banking Basics in Japan
- M18-L02 Setting Up Banking Apps Safely
- M18-L03 Logging In, Authentication, and One-Time Passwords
- M18-L04 Checking Balance and Transaction History
- M18-L05 Domestic Transfers and Furikomi Safety
- M18-L06 Paying Bills, Taxes, and Public Fees Online
- M18-L07 Cards, ATMs, and Online Banking Together
- M18-L08 Bank Fraud Alerts and Official Contact Methods
- M18-L09 Online Banking for Family Support and Caregivers
- M18-L10 Online Banking Review and Monthly Safety Routine

Main Safety Ideas

- Open official apps or trusted bookmarks.
- Read the screen title before tapping.
- Stop when money, passwords, PINs, one-time codes, My Number details, or card information appear.
- Do not use links from unexpected SMS, email, or LINE messages.
- Ask trusted help early. Stopping is safety, not failure.

Review Activity

Use three cards: Safe, Check, and Stop. Read examples such as a normal family LINE message, a fake bank SMS, a Rakuten order notice inside the official app, a QR sticker on a public sign, or a support pop-up. The learner chooses a card and explains why.

Confidence Checklist - I can find the official app. - I can read before tapping. - I can stop at a confirmation screen. - I can protect passwords and codes. - I can ask for help

M18 Module Quiz - Online Banking

1. In Online Banking Basics in Japan, what is the safest first action?
2. Why should a learner be careful with Online Banking?
3. In Setting Up Banking Apps Safely, what is the safest first action?
4. Why should a learner be careful with Bank App?
5. In Logging In, Authentication, and One-Time Passwords, what is the safest first action?
6. Why should a learner be careful with Online Banking?
7. In Checking Balance and Transaction History, what is the safest first action?
8. Why should a learner be careful with Bank App?
9. In Domestic Transfers and Furikomi Safety, what is the safest first action?
10. Why should a learner be careful with Furikomi?
11. In Paying Bills, Taxes, and Public Fees Online, what is the safest first action?
12. Why should a learner be careful with Online Banking?
13. In Cards, ATMs, and Online Banking Together, what is the safest first action?
14. Why should a learner be careful with Banking?
15. In Bank Fraud Alerts and Official Contact Methods, what is the safest first action?
16. Why should a learner be careful with Bank Security?
17. In Online Banking for Family Support and Caregivers, what is the safest first action?
18. Why should a learner be careful with Family Support?
19. In Online Banking Review and Monthly Safety Routine, what is the safest first action?
20. Why should a learner be careful with Online Banking?

M18 Practical Assessment - Online Banking

Goal

The learner demonstrates safe practical use. Safe stopping receives credit.

Safety Rules

- Use demo accounts or supervised real accounts only.
- Do not reveal real passwords, PINs, bank balances, My Number details, or card numbers.
- Do not complete real payments, transfers, purchases, or account changes unless clearly approved.

Tasks

1. Open the correct official app or setting for one lesson task.
2. Read the screen title and explain what the next button does.
3. Find Back, Cancel, Close, or Home.
4. Identify whether the task includes money, personal information, password, PIN, or code.
5. Sort five mock messages into Safe, Check, or Stop.

Rubric

Skill	Pass
Official app	Opens from Home screen, trusted store, or bookmark
Screen reading	Reads title and final button before tapping
Secret protection	Does not share passwords, PINs, or codes
Scam response	Stops and verifies suspicious requests
Confidence	Can ask for help calmly

Teacher Notes

Praise careful checking. Repeat weak tasks with the same example and one new example.

M18 Flashcards - Online Banking

Use these cards for short daily review. Ask the learner to answer in their own words.

Cards - Front: Official app Back: An app installed from the correct store or opened from a known source. - Front: Stop, Check, Confirm Back: Pause, inspect the request, and verify through a separate trusted channel. - Front: One-time code Back: A temporary secret code. Never share it with another person. - Front: Confirmation screen Back: The screen where you check details before final action. - Front: Phishing Back: A fake message or site that tries to steal information. - Front: Smishing Back: Phishing through SMS text message. - Front: QR scam Back: A QR code that sends you to a fake or dangerous site. - Front: Tech support scam Back: A fake helper who tries to get money, codes, or remote control. - Front: Bank transfer safety Back: Check bank name, branch, account number, recipient, amount, and fee. - Front: My Number safety Back: Use official government services and protect My Number Card details. - Front: Online Banking Back: Practice example for Online Banking Basics in Japan: banking basics. - Front: M18-L01 Back: Main lesson: Online Banking Basics in Japan. - Front: Bank App Back: Practice example

M18 Cheat Sheet - Online Banking

Universal Routine

1. Open the official app or trusted bookmark.
2. Read the screen title.
3. Check person, amount, link, password, PIN, code, or permission.
4. Stop if anything feels strange.
5. Close the app and lock the phone.

Red Flags

- Urgent messages: today, final notice, account locked, unpaid, police, refund.
- Requests for password, PIN, SMS code, one-time password, My Number Card photo, or cash card details.
- Money request from someone who refuses a normal phone call.
- QR sticker placed over another QR code.
- Support person asking for remote control.
- Bank transfer requested to fix a problem or receive a prize.

Safe Alternatives

- Use LINE only with known contacts.
- Use PayPay, Rakuten, Mercari, and bank apps from the Home screen.
- Use official bank phone numbers from bank cards or official websites.
- Use Mynaportal/My Number services only from official apps and official guidance.

Lesson Map - M18-L01 Online Banking Basics in Japan - M18-L02 Setting Up Banking Apps Safely - M18-L03 Logging In, Authentication, and One-Time Passwords - M18-L04 Checking Balance and Transaction History - M18-L05 Domestic Transfers and Furikomi Safety - M18-L06 Paying Bills, Taxes, and Public Fees Online - M18-L07

M19 Artificial Intelligence

M19-L01 What AI Is in Everyday Life

Learning Objectives

- Explain everyday ai in simple words.
- Use everyday ai for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

What AI Is in Everyday Life is a practical lesson about recognize AI in phones, websites, shops, maps, cameras, and messages. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about everyday ai is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. voice assistant, camera translation, maps recommendation can use AI-style technology to guess what the

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to everyday ai. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as LINE translation, PayPay spending notice, or Rakuten recommendations. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8. Ask a follow-up question

Guided Example

Scenario: Mrs. Tanaka wants help with everyday ai but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with recognize AI in phones, websites, shops, maps, cameras, and

messages. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any

Practice Exercise

- Ask an AI or smart tool to explain everyday ai in simple English.
- Ask for an example using LINE translation.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using PayPay spending notice or Rakuten recommendations. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in three

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Everyday AI. 2. Say one safe use: recognize AI in phones, websites, shops, maps, cameras, and messages. 3. Say one danger: private information or wrong

Quick Notes

- Everyday AI should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use everyday ai safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. LINE translation
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website,

app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced everyday ai through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M19-L02 How AI Answers Work and Why Mistakes Happen

Learning Objectives

- Explain ai mistakes in simple words.
- Use ai mistakes for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

How AI Answers Work and Why Mistakes Happen is a practical lesson about understand predictions, patterns, hallucinations, and why checking matters. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about ai mistakes is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

M19-L04 Privacy, Safety, and Good AI Habits

Learning Objectives

- Explain privacy in simple words.
- Use privacy for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Privacy, Safety, and Good AI Habits is a practical lesson about protect personal information while using AI tools. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about privacy is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. voice assistant, camera translation, maps recommendation can use AI-style technology to guess what the user wants. LINE translation

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to privacy.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as LINE translation, PayPay spending notice, or Rakuten recommendations.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the useful parts.
8. Ask a follow-up question if

Guided Example

Scenario: Mrs. Tanaka wants help with privacy but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with protect personal information while using AI tools. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data. It does

Practice Exercise

- Ask an AI or smart tool to explain privacy in simple English.
- Ask for an example using LINE translation.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using PayPay spending notice or Rakuten recommendations. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in three

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

In this lesson, the learner practiced privacy through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M19-L05 AI Practice Routine for Seniors

Learning Objectives

- Explain practice routine in simple words.
- Use practice routine for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

AI Practice Routine for Seniors is a practical lesson about build a simple weekly AI practice routine with confidence. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about practice routine is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. voice assistant, camera translation, maps recommendation can use AI-style technology to guess what the user wants.

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to practice routine. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as LINE translation, PayPay spending notice, or Rakuten recommendations. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8. Ask a follow-up question

Guided Example

Scenario: Mrs. Tanaka wants help with practice routine but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with build a simple weekly AI practice routine with confidence. Use simple

English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain practice routine in simple English.
- Ask for an example using LINE translation.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using PayPay spending notice or Rakuten recommendations.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the process to another person in three

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help.
- The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Practice routine. 2. Say one safe use: build a simple weekly AI practice routine with confidence. 3. Say one danger: private information or wrong answers.

Quick Notes

- Practice routine should make life easier, not more stressful.
- A slower user is often a safer user.
- AI can help explain, summarize, translate, plan, and draft.
- AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use practice routine safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. LINE translation
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks.
- Prompt: The message or instruction you give to an AI tool.
- Context: Extra background information that helps the AI understand your situation.
- Hallucination: An AI answer that sounds confident but may be wrong or invented.
- Verification: Checking information with trusted sources before acting.
- Official source: A trusted website, app, letter, phone number, or office from the real organization.
- Private data: Information that can identify you or

access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced practice routine through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M19 Module Review - Artificial Intelligence

Module Purpose

This module helps seniors practice understanding everyday AI and using it safely for daily life. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M19-L01: What AI Is in Everyday Life - recognize AI in phones, websites, shops, maps, cameras, and messages.
- M19-L02: How AI Answers Work and Why Mistakes Happen - understand predictions, patterns, hallucinations, and why checking matters.
- M19-L03: Everyday AI for Home, Travel, Shopping, and Learning - use AI for small useful tasks without sharing private data.
- M19-L04: Privacy, Safety, and Good AI Habits - protect personal information while using AI tools.
- M19-L05: AI Practice Routine for Seniors - build a simple weekly AI practice routine with confidence.

Big Ideas

- AI is a helpful assistant, not a human expert. It can save time, but important answers must be checked.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: LINE translation, PayPay spending notice, Rakuten recommendations, Mercari item

M19 Module Quiz - Artificial Intelligence

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can LINE translation be used safely in practice?
7. What does "official source" mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M19 Practical Assessment - Artificial Intelligence

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include LINE translation, PayPal spending notice, Rakuten recommendations, and Mercari item suggestions.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct assessment behavior is to avoid sharing these items.

M19 Flashcards - Artificial Intelligence

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M19 Cheat Sheet - Artificial Intelligence

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.
- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.
- Practicing computer and smartphone steps.

Do Not Use AI As The Final Authority For

- Medical treatment.
- Bank transfer decisions.

- Investments.
- Pension, tax, immigration, or government applications.
- Legal documents.
- Emergency decisions.
- Identity verification.

Never Share Casually

- Passwords.
- PINs.
- One-time passwords or SMS codes.
- My Number or photos of My Number Card.
- Full bank details or card details.
- Private medical records.
- Full home address when not necessary.
- Photos of passports, residence cards, or insurance cards.

Pause-Check-Confirm

1. Pause: Do not click, pay, reply, or share immediately. 2. Check: Who sent this? Is it urgent? Does it ask for money, codes, or login? 3. Confirm: Open

M20 ChatGPT

M20-L01 Getting Started with ChatGPT

Learning Objectives

- Explain getting started in simple words.
- Use getting started for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Getting Started with ChatGPT is a practical lesson about open ChatGPT, understand the chat screen, and ask a safe first question. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about getting started is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. ChatGPT web app, ChatGPT mobile app, voice chat can use AI-style technology to guess

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to getting started.
3. Start with a safe question that does not include private information.
4. Use a simple

prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as planning a Kyoto day trip, translating a LINE message, or summarizing a Rakuten product page. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the

Guided Example

Scenario: Mrs. Tanaka wants help with getting started but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with open ChatGPT, understand the chat screen, and ask a safe first question. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks

Practice Exercise

- Ask an AI or smart tool to explain getting started in simple English.
- Ask for an example using planning a Kyoto day trip.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using translating a LINE message or summarizing a Rakuten product page. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Getting started. 2. Say one safe use: open ChatGPT, understand the chat screen, and ask a safe first question. 3.

Say one danger: private information

Quick Notes

- Getting started should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use getting started safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. planning a Kyoto day trip
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced getting started through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M20-L02 Asking Better Questions

Learning Objectives

- Explain prompting in simple words.
- Use prompting for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Asking Better Questions is a practical lesson about write prompts with goal, context, limits, and desired format. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about prompting is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. ChatGPT web app, ChatGPT mobile app, voice chat can use AI-style technology to guess what the user wants. planning

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to prompting. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as planning a Kyoto day trip, translating a LINE message, or summarizing a Rakuten product page. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful

Guided Example

Scenario: Mrs. Tanaka wants help with prompting but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with write prompts with goal, context, limits, and desired format. Use

simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain prompting in simple English.
- Ask for an example using planning a Kyoto day trip.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using translating a LINE message or summarizing a Rakuten product page.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the process to

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help.
- The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Prompting. 2. Say one safe use: write prompts with goal, context, limits, and desired format. 3. Say one danger: private information or wrong answers. 4.

Quick Notes

- Prompting should make life easier, not more stressful.
- A slower user is often a safer user.
- AI can help explain, summarize, translate, plan, and draft.
- AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use prompting safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. planning a Kyoto day trip
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks.
- Prompt: The message or instruction you give to an AI tool.
- Context: Extra background information that helps the AI understand your situation.
- Hallucination: An AI answer that sounds confident but may be wrong or invented.
- Verification: Checking information with trusted sources before acting.
- Official source: A trusted website,

app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced prompting through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M20-L03 Travel Planning, Translation, and Daily Tasks

Learning Objectives

- Explain daily tasks in simple words.
- Use daily tasks for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Travel Planning, Translation, and Daily Tasks is a practical lesson about use ChatGPT for travel, messages, shopping comparison, and home tasks. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about daily tasks is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for

Practice Exercise

- Ask an AI or smart tool to explain verification in simple English.
- Ask for an example using planning a Kyoto day trip.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using translating a LINE message or summarizing a Rakuten product page.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the process to

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help.
- The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Verification. 2. Say one safe use: use ChatGPT as a guide while relying on official sources and professionals. 3. Say one danger: private information or

Quick Notes

- Verification should make life easier, not more stressful.
- A slower user is often a safer user.
- AI can help explain, summarize, translate, plan, and draft.
- AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use verification safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. planning a Kyoto day trip
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with

tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced verification through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M20-L05 Privacy Settings, Hallucinations, and Review Habits

Learning Objectives

- Explain safety review in simple words.
- Use safety review for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain safety review in simple English.
- Ask for an example using planning a Kyoto day trip.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using translating a LINE message or summarizing a Rakuten product page. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Safety review. 2. Say one safe use: avoid private data sharing and check answers before acting. 3. Say one danger: private information or wrong answers.

Quick Notes

- Safety review should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use safety review safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.

3. Check an official source or ask a qualified person.
4. planning a Kyoto day trip
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced safety review through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M20 Module Review - ChatGPT

Module Purpose

This module helps seniors practice using ChatGPT for questions, planning, writing, translation, and learning. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M20-L01: Getting Started with ChatGPT - open ChatGPT, understand the chat screen, and ask a safe first question.
- M20-L02: Asking Better Questions - write prompts with goal, context, limits, and desired format.
- M20-L03: Travel Planning, Translation, and Daily Tasks - use ChatGPT for travel, messages, shopping comparison, and home tasks.
- M20-L04: Checking Health, Money, and Official Information Safely - use ChatGPT as a guide while relying on official sources and professionals.
- M20-L05: Privacy Settings, Hallucinations, and Review Habits - avoid private data sharing and check answers before acting.

Big Ideas

- ChatGPT works best when you give clear context, ask it to explain simply, and verify important information.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: planning a Kyoto day trip, translating a LINE message, summarizing a

M20 Module Quiz - ChatGPT

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can planning a Kyoto day trip be used safely in practice?
7. What does “official source” mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M20 Practical Assessment - ChatGPT

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include planning a Kyoto day trip, translating a LINE message, summarizing a Rakuten product page, and checking a clinic instruction.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct assessment behavior

M20 Flashcards - ChatGPT

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M20 Cheat Sheet - ChatGPT

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.
- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.
- Practicing computer and smartphone steps.

Do Not Use AI As The Final Authority For

- Medical treatment.
- Bank transfer decisions.
- Investments.
- Pension, tax, immigration, or government applications.
- Legal documents.
- Emergency decisions.
- Identity verification.

Never Share Casually

- Passwords.
- PINs.
- One-time passwords or SMS codes.
- My Number or photos of My Number Card.
- Full bank details or card details.
- Private medical records.
- Full home address when not necessary.
- Photos of passports, residence cards, or insurance cards.

Pause-Check-Confirm

1. Pause: Do not click, pay, reply, or share immediately.
2. Check: Who sent this? Is it urgent? Does it ask for money, codes, or login?
3. Confirm: Open

M21 Gemini

M21-L01 Getting Started with Gemini

Learning Objectives

- Explain getting started in simple words.
- Use getting started for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Getting Started with Gemini is a practical lesson about open Gemini, ask simple questions, and understand the response area. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about getting started is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. Gemini app, Google Search, Google Maps can use AI-style technology to guess what the user wants.

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to getting started. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as finding train ideas in Japan, checking a Japanese sign, or organizing Gmail. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8.

Guided Example

Scenario: Mrs. Tanaka wants help with getting started but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with open Gemini, ask simple questions, and understand the response

area. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any

Practice Exercise

- Ask an AI or smart tool to explain getting started in simple English.
- Ask for an example using finding train ideas in Japan.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using checking a Japanese sign or organizing Gmail. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Getting started. 2. Say one safe use: open Gemini, ask simple questions, and understand the response area. 3. Say one danger: private information or wrong

Quick Notes

- Getting started should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use getting started safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. finding train ideas in Japan
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or

access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced getting started through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M21-L02 Using Gemini with Google Search and Workspace

Learning Objectives

- Explain google tools in simple words.
- Use google tools for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Using Gemini with Google Search and Workspace is a practical lesson about combine Gemini with search, Gmail, Docs, and Sheets carefully. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about google tools is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

M21-L04 Checking Answers and Privacy in Gemini

Learning Objectives

- Explain safety review in simple words.
- Use safety review for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Checking Answers and Privacy in Gemini is a practical lesson about review sources, manage activity, and avoid private data risks. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about safety review is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. Gemini app, Google Search, Google Maps can use AI-style technology to guess what the user

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to safety review.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as finding train ideas in Japan, checking a Japanese sign, or organizing Gmail.

7. Underline or write down only the useful parts.
- 8.

Guided Example

Scenario: Mrs. Tanaka wants help with safety review but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with review sources, manage activity, and avoid private data risks. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain safety review in simple English.
- Ask for an example using finding train ideas in Japan.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using checking a Japanese sign or organizing Gmail. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Safety review. 2. Say one safe use: review sources, manage activity, and avoid private data risks. 3. Say one danger: private information or wrong answers.

Quick Notes

- Safety review should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use safety review safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.

3. Check an official source or ask a qualified person.
4. finding train ideas in Japan
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced safety review through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M21-L05 Gemini Practice Projects for Seniors

Learning Objectives

- Explain practice projects in simple words.
- Use practice projects for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Gemini Practice Projects for Seniors is a practical lesson about complete practical projects using Gemini safely. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about practice projects is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. Gemini app, Google Search, Google Maps can use AI-style technology to guess what the user wants. finding train ideas

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to practice projects. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as finding train ideas in Japan, checking a Japanese sign, or organizing Gmail. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8.

Guided Example

Scenario: Mrs. Tanaka wants help with practice projects but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with complete practical projects using Gemini safely. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data. It does

Practice Exercise

- Ask an AI or smart tool to explain practice projects in simple English.
- Ask for an example using finding train ideas in Japan.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using checking a Japanese sign or organizing Gmail. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Practice projects. 2. Say one safe use: complete practical projects using Gemini safely. 3. Say one danger: private information or wrong answers. 4. Say one

Quick Notes

- Practice projects should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use practice projects safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. finding train ideas in Japan
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced practice projects through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M21 Module Review - Gemini

Module Purpose

This module helps seniors practice using Gemini with Google services for search, travel, translation, and daily questions. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M21-L01: Getting Started with Gemini - open Gemini, ask simple questions, and understand the response area.
- M21-L02: Using Gemini with Google Search and Workspace - combine Gemini with search, Gmail, Docs, and Sheets carefully.
- M21-L03: Translation, Travel, Images, and Smartphone Help - use Gemini for language, travel, photos, and phone help.
- M21-L04: Checking Answers and Privacy in Gemini - review sources, manage activity, and avoid private data risks.
- M21-L05: Gemini Practice Projects for Seniors - complete practical projects using Gemini safely.

Big Ideas

- Gemini can be convenient with Google tools, but it still needs careful checking and privacy awareness.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: finding train ideas in Japan, checking a Japanese sign, organizing Gmail, summarizing a Google Docs note,

M21 Module Quiz - Gemini

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can finding train ideas in Japan be used safely in practice?
7. What does "official source" mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M21 Practical Assessment - Gemini

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include finding train ideas in Japan, checking a Japanese sign, organizing Gmail, and summarizing a Google Docs note.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct assessment behavior is to

M21 Flashcards - Gemini

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M21 Cheat Sheet - Gemini

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.

- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.
- Practicing computer and smartphone steps.

Do Not Use AI As The Final Authority For

- Medical treatment.
- Bank transfer decisions.
- Investments.
- Pension, tax, immigration, or government applications.
- Legal documents.
- Emergency decisions.
- Identity verification.

Never Share Casually

- Passwords.
- PINs.
- One-time passwords or SMS codes.
- My Number or photos of My Number Card.
- Full bank details or card details.
- Private medical records.
- Full home address when not necessary.
- Photos of passports, residence cards, or insurance cards.

Pause-Check-Confirm

1. Pause: Do not click, pay, reply, or share immediately. 2. Check: Who sent this? Is it urgent? Does it ask for money, codes, or login? 3. Confirm: Open

M22 Microsoft Copilot

M22-L01 What Copilot Is and Where It Appears

Learning Objectives

- Explain overview in simple words.
- Use overview for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

What Copilot Is and Where It Appears is a practical lesson about recognize Copilot in Microsoft apps and understand common uses. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about overview is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. Copilot website, Copilot in Edge, Copilot in Windows can use AI-style technology to guess what

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to overview.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as drafting an Outlook email, summarizing a Word handout, or creating a PowerPoint for a community group.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the

Guided Example

Scenario: Mrs. Tanaka wants help with overview but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with recognize Copilot in Microsoft apps and understand common uses. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain overview in simple English.
- Ask for an example using drafting an Outlook email.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using summarizing a Word handout or creating a PowerPoint for a community group.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app

asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. -
The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Overview. 2. Say one safe use: recognize Copilot in Microsoft apps and understand common uses. 3. Say one danger: private information or wrong answers. 4.

Quick Notes

- Overview should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures. -

Quiz Answers

1. To help the learner use overview safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. drafting an Outlook email
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced overview through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M22-L02 Copilot for Windows, Edge, and Web Search

Learning Objectives

- Explain web and windows in simple words.
- Use web and windows for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Office productivity. 2. Say one safe use: use Copilot for office tasks while checking all output. 3. Say one danger: private information or wrong answers.

Quick Notes

- Office productivity should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use office productivity safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. drafting an Outlook email
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced office productivity through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M22-L04 Safe Office Productivity and Privacy

Learning Objectives

- Explain office safety in simple words.
- Use office safety for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Safe Office Productivity and Privacy is a practical lesson about protect documents, email, and personal information when using Copilot. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about office safety is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. Copilot website, Copilot in Edge, Copilot in Windows can use AI-style technology to guess what the

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to office safety. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as drafting an Outlook email, summarizing a Word handout, or creating a PowerPoint for a community group. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only

Guided Example

Scenario: Mrs. Tanaka wants help with office safety but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with protect documents, email, and personal information when using Copilot. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain office safety in simple English.
- Ask for an example using drafting an Outlook email.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using summarizing a Word handout or creating a PowerPoint for a community group.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help.
- The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Office safety. 2. Say one safe use: protect documents, email, and personal information when using Copilot. 3. Say one danger: private information or wrong answers.

Quick Notes

- Office safety should make life easier, not more stressful.
- A slower user is often a safer user.
- AI can help explain, summarize, translate, plan, and draft.
- AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use office safety safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. drafting an Outlook email
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced office safety through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M22-L05 Copilot Practice Projects for Home and Community

Learning Objectives

- Explain practice projects in simple words.
- Use practice projects for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Copilot Practice Projects for Home and Community is a practical lesson about complete useful projects for letters, budgets, slides, and event planning. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about practice projects is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. Copilot website, Copilot in Edge, Copilot in Windows can use AI-style technology to

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to practice projects.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as drafting an Outlook email, summarizing a Word handout, or creating a PowerPoint for a community group.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only

Guided Example

Scenario: Mrs. Tanaka wants help with practice projects but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with complete useful projects for letters, budgets, slides, and event planning. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any

Practice Exercise

- Ask an AI or smart tool to explain practice projects in simple English.
- Ask for an example using drafting an Outlook email.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using summarizing a Word handout or creating a PowerPoint for a community group. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Practice projects. 2. Say one safe use: complete useful projects for letters, budgets, slides, and event planning. 3. Say one danger: private information or wrong

Quick Notes

- Practice projects should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use practice projects safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. drafting an Outlook email
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced practice projects through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M22 Module Review - Microsoft Copilot

Module Purpose

This module helps seniors practice using Copilot in Windows, Edge, and Microsoft 365 for productivity. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M22-L01: What Copilot Is and Where It Appears - recognize Copilot in Microsoft apps and understand common uses.
- M22-L02: Copilot for Windows, Edge, and Web Search - use Copilot for browsing help, simple settings questions, and web summaries.
- M22-L03: Copilot with Word, Excel, Outlook, and PowerPoint - use Copilot for office tasks while checking all output.
- M22-L04: Safe Office Productivity and Privacy - protect documents, email, and personal information when using Copilot.
- M22-L05: Copilot Practice Projects for Home and Community - complete useful projects for letters, budgets, slides, and event planning.

Big Ideas

- Copilot can help with documents and summaries, but users must check facts, tone, and privacy before sending or saving work.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: drafting an Outlook email,

M22 Module Quiz - Microsoft Copilot

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can drafting an Outlook email be used safely in practice?
7. What does “official source” mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M22 Practical Assessment - Microsoft Copilot

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include drafting an Outlook email, summarizing a Word handout, creating a PowerPoint for a community group, and checking a small Excel budget.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct

M22 Flashcards - Microsoft Copilot

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M22 Cheat Sheet - Microsoft Copilot

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.
- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.
- Practicing computer and smartphone steps.

Do Not Use AI As The Final Authority For

- Medical treatment.
- Bank transfer decisions.
- Investments.
- Pension, tax, immigration, or government applications.
- Legal documents.
- Emergency decisions.
- Identity verification.

Never Share Casually

- Passwords.
- PINs.
- One-time passwords or SMS codes.
- My Number or photos of My Number Card.
- Full bank details or card details.
- Private medical records.
- Full home address when not necessary.
- Photos of passports, residence cards, or insurance cards.

Pause-Check-Confirm

1. Pause: Do not click, pay, reply, or share immediately.
2. Check: Who sent this? Is it urgent? Does it ask for money, codes, or login?
3. Confirm: Open

M23 Deepfakes & Misinformation

M23-L01 What Misinformation and Deepfakes Are

Learning Objectives

- Explain definitions in simple words.
- Use definitions for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

What Misinformation and Deepfakes Are is a practical lesson about understand false information, manipulated media, and AI-generated voices or faces. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about definitions is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. reverse image search, official websites, fact-checking sites can use AI-style technology to guess what the user

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to definitions. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as fake LINE emergency message, fake PayPay prize, or fake celebrity investment video. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8. Ask

Guided Example

Scenario: Mrs. Tanaka wants help with definitions but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with understand false information, manipulated media, and AI-generated voices or faces. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain definitions in simple English.
- Ask for an example using fake LINE emergency message.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using fake PayPay prize or fake celebrity investment video.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help.
- The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Definitions. 2. Say one safe use: understand false information, manipulated media, and AI-generated voices or faces. 3. Say one danger: private information or wrong answers.

Quick Notes

- Definitions should make life easier, not more stressful.
- A slower user is often a safer user.
- AI can help explain, summarize, translate, plan, and draft.
- AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use definitions safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. fake LINE emergency message
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced definitions through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M23-L02 Scam Messages, Fake News, and Emotional Tricks

Learning Objectives

- Explain scam psychology in simple words.
- Use scam psychology for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Scam Messages, Fake News, and Emotional Tricks is a practical lesson about recognize pressure tactics in messages, emails, calls, and social media. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about scam psychology is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. reverse image search, official websites, fact-checking sites can use AI-style technology to guess

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to scam psychology.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as fake LINE emergency message, fake PayPay prize, or fake celebrity investment video.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the useful parts.
- 8.

Guided Example

Scenario: Mrs. Tanaka wants help with scam psychology but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with recognize pressure tactics in messages, emails, calls, and social media. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any

Practice Exercise

- Ask an AI or smart tool to explain scam psychology in simple English.
- Ask for an example using fake LINE emergency message.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using fake PayPay prize or fake celebrity investment video. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Scam psychology. 2. Say one safe use: recognize pressure tactics in messages, emails, calls, and social media. 3. Say one danger: private information or wrong

Quick Notes

- Scam psychology should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use scam psychology safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. fake LINE emergency message
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced scam psychology through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M23-L03 How to Fact-Check Images, Videos, and Claims

Learning Objectives

- Explain fact-checking in simple words.
- Use fact-checking for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

How to Fact-Check Images, Videos, and Claims is a practical lesson about use a simple checking process before believing or sharing. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about fact-checking is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. reverse image search, official websites, fact-checking sites can use AI-style technology to guess what the

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to fact-checking. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as fake LINE emergency message, fake PayPay prize, or fake celebrity investment video. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8. Ask

Guided Example

Scenario: Mrs. Tanaka wants help with fact-checking but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with use a simple checking process before believing or sharing. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain fact-checking in simple English.
- Ask for an example using fake LINE emergency message.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using fake PayPay prize or fake celebrity investment video. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Fact-checking. 2. Say one safe use: use a simple checking process before believing or sharing. 3. Say one danger: private information or wrong answers. 4.

Quick Notes

- Fact-checking should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures. -

Quiz Answers

1. To help the learner use fact-checking safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.

In this lesson, the learner practiced fact-checking through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M23-L04 Health, Finance, and Government Information Verification

Learning Objectives

- Explain high-risk topics in simple words.
- Use high-risk topics for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Health, Finance, and Government Information Verification is a practical lesson about verify high-risk information with official sources and professionals. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about high-risk topics is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. reverse image search, official websites, fact-checking sites can use AI-style technology to guess what the user

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to high-risk topics.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as fake LINE emergency message, fake PayPay prize, or fake celebrity investment video.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the useful parts.
- 8.

Guided Example

Scenario: Mrs. Tanaka wants help with high-risk topics but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with verify high-risk information with official sources and professionals. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain high-risk topics in simple English.
- Ask for an example using fake LINE emergency message.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using fake PayPay prize or fake celebrity investment video. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: High-risk topics. 2. Say one safe use: verify high-risk information with official sources and professionals. 3. Say one danger: private information or wrong answers. 4.

Quick Notes

- High-risk topics should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use high-risk topics safely and practically in daily life.

2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. fake LINE emergency message
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced high-risk topics through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M23-L05 Family Safety Plan for Deepfakes and Rumors

Learning Objectives

- Explain family plan in simple words.
- Use family plan for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Family Safety Plan for Deepfakes and Rumors is a practical lesson about create family rules for voice scams, emergency messages, and suspicious posts. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about family plan is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. reverse image search, official websites, fact-checking sites can use AI-style technology to

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to family plan. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as fake LINE emergency message, fake PayPay prize, or fake celebrity investment video. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8.

Guided Example

Scenario: Mrs. Tanaka wants help with family plan but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with create family rules for voice scams, emergency messages, and suspicious posts. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for

Practice Exercise

- Ask an AI or smart tool to explain family plan in simple English.
- Ask for an example using fake LINE emergency message.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using fake PayPay prize or fake celebrity investment video.
- Remove all private details from the task before asking AI.
- Ask the AI for a checklist, not a final decision.
- Find one official source that could confirm the important facts.
- Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly.
- Believing a confident answer without checking it.
- Clicking a link inside a suspicious message before verifying the sender.
- Using AI as a doctor, bank clerk, lawyer, or government officer.
- Getting upset when the first answer is not perfect instead of asking a simpler follow-up question.
- Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps."
- The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words."
- The answer may be wrong.: Check official websites, printed notices, or trusted professionals.
- The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help.
- The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Family plan. 2. Say one safe use: create family rules for voice scams, emergency messages, and suspicious posts. 3. Say one danger: private information or

Quick Notes

- Family plan should make life easier, not more stressful.
- A slower user is often a safer user.
- AI can help explain, summarize, translate, plan, and draft.
- AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use family plan safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. fake LINE emergency message
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with

tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced family plan through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M23 Module Review - Deepfakes & Misinformation

Module Purpose

This module helps seniors practice recognizing fake media, scams, rumors, and misleading claims. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M23-L01: What Misinformation and Deepfakes Are - understand false information, manipulated media, and AI-generated voices or faces.
- M23-L02: Scam Messages, Fake News, and Emotional Tricks - recognize pressure tactics in messages, emails, calls, and social media.
- M23-L03: How to Fact-Check Images, Videos, and Claims - use a simple checking process before believing or sharing.
- M23-L04: Health, Finance, and Government Information Verification - verify high-risk information with official sources and professionals.
- M23-L05: Family Safety Plan for Deepfakes and Rumors - create family rules for voice scams, emergency messages, and suspicious posts.

Big Ideas

- Strong emotions, urgent messages, and requests for money are warning signs. Pause, verify, and ask a trusted person.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: fake LINE emergency message, fake PayPay prize, fake celebrity

M23 Module Quiz - Deepfakes & Misinformation

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can fake LINE emergency message be used safely in practice?
7. What does "official source" mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M23 Practical Assessment - Deepfakes & Misinformation

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include fake LINE emergency message, fake PayPay prize, fake celebrity investment video, and false health cure post.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct assessment behavior is to avoid

M23 Flashcards - Deepfakes & Misinformation

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M23 Cheat Sheet - Deepfakes & Misinformation

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.

- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.
- Practicing computer and smartphone steps.

Do Not Use AI As The Final Authority For

- Medical treatment.
- Bank transfer decisions.
- Investments.
- Pension, tax, immigration, or government applications.
- Legal documents.
- Emergency decisions.
- Identity verification.

Never Share Casually

- Passwords.
- PINs.
- One-time passwords or SMS codes.
- My Number or photos of My Number Card.
- Full bank details or card details.
- Private medical records.
- Full home address when not necessary.
- Photos of passports, residence cards, or insurance cards.

Pause-Check-Confirm

1. Pause: Do not click, pay, reply, or share immediately. 2. Check: Who sent this? Is it urgent? Does it ask for money, codes, or login? 3. Confirm: Open

M24 Future Technology

M24-L01 Smart Homes, Wearables, and Everyday Sensors

Learning Objectives

- Explain smart devices in simple words.
- Use smart devices for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Smart Homes, Wearables, and Everyday Sensors is a practical lesson about understand smart devices, health trackers, and home sensors. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about smart devices is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. smart home device, wearable health tracker, digital ID can use AI-style technology to guess what the

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to smart devices.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as My Number Card, Mynaportal, or IC card and mobile Suica.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the useful parts.
8. Ask a

Guided Example

Scenario: Mrs. Tanaka wants help with smart devices but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with understand smart devices, health trackers, and home sensors. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain smart devices in simple English.
- Ask for an example using My Number Card.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using Mynaportal or IC card and mobile Suica. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Smart devices. 2. Say one safe use: understand smart devices, health trackers, and home sensors. 3. Say one danger: private information or wrong answers. 4.

Quick Notes

- Smart devices should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use smart devices safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. My Number Card
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced smart devices through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M24-L02 Digital Government and My Number Services

Learning Objectives

- Explain government services in simple words.
- Use government services for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Digital Government and My Number Services is a practical lesson about understand digital government services and safe official website habits. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about government services is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. smart home device, wearable health tracker, digital ID can use AI-style technology to guess what

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to government services. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as My Number Card, Mynaportal, or IC card and mobile Suica. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8. Ask a

Guided Example

Scenario: Mrs. Tanaka wants help with government services but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with understand digital government services and safe official website habits. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain government services in simple English.
- Ask for an example using My Number Card.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using Mynaportal or IC card and mobile Suica. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Government services. 2. Say one safe use: understand digital government services and safe official website habits. 3. Say one danger: private information or wrong answers.

Quick Notes

- Government services should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use government services safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. My Number Card
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced government services through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M24-L03 AI Assistants, Robots, and Voice Interfaces

Learning Objectives

- Explain assistants in simple words.
- Use assistants for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

AI Assistants, Robots, and Voice Interfaces is a practical lesson about understand assistants, robots, and voice controls for daily help. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about assistants is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. smart home device, wearable health tracker, digital ID can use AI-style technology to guess what the

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to assistants.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as My Number Card, Mynaportal, or IC card and mobile Suica.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the useful parts.
8. Ask a follow-up

Guided Example

Scenario: Mrs. Tanaka wants help with assistants but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with understand assistants, robots, and voice controls for daily help. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain assistants in simple English.
- Ask for an example using My Number Card.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using Mynaportal or IC card and mobile Suica. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person in

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

In this lesson, the learner practiced assistants through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M24-L04 Cashless, Transportation, and Shopping Technology

Learning Objectives

- Explain modern services in simple words.
- Use modern services for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Cashless, Transportation, and Shopping Technology is a practical lesson about understand cashless payments, tickets, QR codes, and online shopping changes. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about modern services is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. smart home device, wearable health tracker, digital ID can use AI-style technology to guess what

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to modern services. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. In this lesson, the learner practiced modern services through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M24-L05 Preparing for Future Changes Without Fear

Learning Objectives

- Explain future learning in simple words.
- Use future learning for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Preparing for Future Changes Without Fear is a practical lesson about use a calm method to learn new technology step by step. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about future learning is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. smart home device, wearable health tracker, digital ID can use AI-style technology to

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to future learning.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as My Number Card, Mynaportal, or IC card and mobile Suica.
6. Read the answer once without clicking anything. Then read it again slowly.

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Future learning. 2. Say one safe use: use a calm method to learn new technology step by step. 3. Say one danger: private information or

Quick Notes

- Future learning should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures.

Quiz Answers

1. To help the learner use future learning safely and practically in daily life.

2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. My Number Card
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced future learning through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI

M24 Module Review - Future Technology

Module Purpose

This module helps seniors practice understanding new technology without fear and choosing useful tools. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M24-L01: Smart Homes, Wearables, and Everyday Sensors - understand smart devices, health trackers, and home sensors.
- M24-L02: Digital Government and My Number Services - understand digital government services and safe official website habits.
- M24-L03: AI Assistants, Robots, and Voice Interfaces - understand assistants, robots, and voice controls for daily help.
- M24-L04: Cashless, Transportation, and Shopping Technology - understand cashless payments, tickets, QR codes, and online shopping changes.
- M24-L05: Preparing for Future Changes Without Fear - use a calm method to learn new technology step by step.

Big Ideas

- Future technology should make life easier, safer, and more independent. You do not need every new tool; choose what solves a real problem.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: My Number Card, Mynaportal, IC card and

M24 Module Quiz - Future Technology

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can My Number Card be used safely in practice?
7. What does “official source” mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M24 Practical Assessment - Future Technology

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include My Number Card, Mynaportal, IC card and mobile Suica, and smartphone health app.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct assessment behavior is to avoid sharing these items.

M24 Flashcards - Future Technology

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M24 Cheat Sheet - Future Technology

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.
- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.
- Practicing computer and smartphone steps.

Do Not Use AI As The Final Authority For

- Medical treatment.
- Bank transfer decisions.
- Investments.
- Pension, tax, immigration, or government applications.
- Legal documents.
- Emergency decisions.
- Identity verification.

Never Share Casually

- Passwords.
- PINs.
- One-time passwords or SMS codes.
- My Number or photos of My Number Card.
- Full bank details or card details.
- Private medical records.
- Full home address when not necessary.
- Photos of passports, residence cards, or insurance cards.

Pause-Check-Confirm

1. Pause: Do not click, pay, reply, or share immediately.
2. Check: Who sent this? Is it urgent? Does it ask for money, codes, or login?
3. Confirm: Open

M25 Digital Life Mastery

M25-L01 Personal Digital Routine

Learning Objectives

- Explain routine in simple words.
- Use routine for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer. - Can open a web browser or app with help if needed. - Can read simple English instructions slowly. - Has a notebook or printed handout for writing steps. - Understands that private codes and passwords

Lesson Content

Personal Digital Routine is a practical lesson about create a weekly routine for devices, accounts, updates, and messages. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable.

A useful way to think about routine is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. calendar, contacts, password manager can use AI-style technology to guess what the user wants. weekly LINE family check-in

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface. 2. Open the tool or service used in this lesson. If the screen is different, look for words related to routine. 3. Start with a safe question that does not include private information. 4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions." 5. Use one Japan-focused example, such as weekly LINE family check-in, PayPay/Rakuten purchase check, or Mercari safe selling routine. 6. Read the answer once without clicking anything. Then read it again slowly. 7. Underline or write down only the useful parts. 8. Ask

Guided Example

Scenario: Mrs. Tanaka wants help with routine but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with create a weekly routine for devices, accounts, updates, and messages. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private

Practice Exercise

- Ask an AI or smart tool to explain routine in simple English.
- Ask for an example using weekly LINE family check-in.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using PayPay/Rakuten purchase check or Mercari safe selling routine. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

Troubleshooting

- The answer is too long.: Ask: "Please shorten this to 5 simple steps." - The answer uses difficult words.: Ask: "Explain like I am a beginner and define difficult words." - The answer may be wrong.: Check official websites, printed notices, or trusted professionals. - The app asks for permission.: Read the permission slowly. If unsure, choose not now and ask for help. - The learner feels nervous.: Stop for

Memory Reinforcement

Remember the safe AI sentence:

Ask small. Share little. Check important. Practice again.

Use this memory routine after every lesson: 1. Say the lesson topic aloud: Routine. 2. Say one safe use: create a weekly routine for devices, accounts, updates, and messages. 3. Say one danger: private information or wrong answers.

Quick Notes

- Routine should make life easier, not more stressful. - A slower user is often a safer user. - AI can help explain, summarize, translate, plan, and draft. - AI can also make mistakes, especially with dates, prices, rules, health advice, and official procedures. -

Quiz Answers

1. To help the learner use routine safely and practically in daily life.
2. A small task is easier to check, easier to correct, and less stressful.
3. Check an official source or ask a qualified person.
4. weekly LINE family check-in
5. A confident answer that may be wrong, invented, or missing important context.
6. Passwords, PINs, one-time codes, My Number, full bank details, private medical details, and copies of important IDs.
7. Written steps reduce forgetting and make practice calmer.
8. Stop, read the screen slowly, look for similar words, and ask a trusted helper if unsure.
9. Translate ordinary text, then check important or official wording with a person or official source.
10. Review, check important facts, and save only useful notes.

Flashcards

- AI assistant: A computer service that responds to questions, drafts text, summarizes information, or helps with

tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced routine through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M25-L02 Travel, Communication, Shopping, and Banking Workflow

Learning Objectives

- Explain daily workflow in simple words.
- Use daily workflow for one safe daily task.
- Recognize when information must be checked before acting.
- Protect private information while practicing.
- Repeat the task slowly using written steps.

Why This Matters

This lesson matters because many daily services now include AI or smart technology. A senior may meet it inside a phone, a bank app, a shopping page, a map, a translation tool, or a message app. The goal is not to become a technical expert. The goal is to feel calm, know what the tool can do, and know when to stop.

Prerequisites

- Can turn on a smartphone, tablet, or computer.
- Can open a web browser or app with help if needed.
- Can read simple English instructions slowly.
- Has a notebook or printed handout for writing steps.
- Understands that private codes and passwords

Lesson Content

Travel, Communication, Shopping, and Banking Workflow is a practical lesson about combine maps, translation, payments, shopping, and bank safety. The learner should begin with one simple question, one simple example, and one simple safety rule. Seniors often learn best when the same action is repeated many times. Repetition is not a weakness. Repetition is how a new digital habit becomes comfortable. A useful way to think about daily workflow is the three-box method. First, decide the task: what do I want help with? Second, decide the information: what can I safely share? Third, decide the check: how will I confirm the result? This method works for travel planning, translation, shopping help, government forms, health questions, and family messages.

In daily life, the tool may appear in places that do not look special. calendar, contacts, password manager can use AI-style technology to guess what the user wants. weekly LINE

Visual Explanation

Step-by-Step Instructions

1. Sit somewhere quiet and place the phone or computer on a stable surface.
2. Open the tool or service used in this lesson. If the screen is different, look for words related to daily workflow.
3. Start with a safe question that does not include private information.
4. Use a simple prompt pattern: "Please help me with [task]. Explain in simple English. Give step-by-step instructions."
5. Use one Japan-focused example, such as weekly LINE family check-in, PayPay/Rakuten purchase check, or Mercari safe selling routine.
6. Read the answer once without clicking anything. Then read it again slowly.
7. Underline or write down only the useful parts.
- 8.

Guided Example

Scenario: Mrs. Tanaka wants help with daily workflow but does not want to make a mistake. She decides to practice with a safe daily question first.

She writes this prompt:

> I am a senior beginner. Please help me with combine maps, translation, payments, shopping, and bank safety. Use simple English. Give me 5 steps. Do not ask for private information.

The AI gives an answer. Mrs. Tanaka does not copy everything. She checks whether the answer asks for any private data.

Practice Exercise

- Ask an AI or smart tool to explain daily workflow in simple English.
- Ask for an example using weekly LINE family check-in.
- Ask the tool to shorten the answer to five steps.
- Circle any part that must be checked before acting.
- Write one safe prompt in your notebook for future use.

Challenge Exercise

- Create a mini-plan for a real-life task using PayPay/Rakuten purchase check or Mercari safe selling routine. - Remove all private details from the task before asking AI. - Ask the AI for a checklist, not a final decision. - Find one official source that could confirm the important facts. - Teach the process to another person

Common Mistakes

- Typing too much private information because the chat feels friendly. - Believing a confident answer without checking it. - Clicking a link inside a suspicious message before verifying the sender. - Using AI as a doctor, bank clerk, lawyer, or government officer. - Getting upset when the first answer is not perfect instead of asking a simpler follow-up question. - Forgetting to write down

tasks. - Prompt: The message or instruction you give to an AI tool. - Context: Extra background information that helps the AI understand your situation. - Hallucination: An AI answer that sounds confident but may be wrong or invented. - Verification: Checking information with trusted sources before acting. - Official source: A trusted website, app, letter, phone number, or office from the real organization. - Private data: Information that can identify you or access your accounts. - Two-source rule: Check

Summary

In this lesson, the learner practiced capstone through a safe, simple, repeatable routine. The most important point is not to memorize every screen. The most important point is to stay calm, ask clear questions, protect private information, and verify important answers. With practice, AI and

M25 Module Review - Digital Life Mastery

Module Purpose

This module helps seniors practice combining computer, smartphone, internet, AI, safety, and daily workflows. It is written for slow, careful learning. The learner should not rush. The learner should repeat each task several times using safe examples before using it in real life.

Lesson Map

- M25-L01: Personal Digital Routine - create a weekly routine for devices, accounts, updates, and messages.
- M25-L02: Travel, Communication, Shopping, and Banking Workflow - combine maps, translation, payments, shopping, and bank safety.
- M25-L03: Health Information, Documents, and Emergency Preparation - organize health information, documents, and emergency contacts safely.
- M25-L04: Privacy, Passwords, Backups, and Family Support - maintain security with simple repeatable habits and trusted helpers.
- M25-L05: Capstone: Confident Digital Life Plan - complete a final plan showing safe and practical digital independence.

Big Ideas

- Digital mastery means having a calm routine: prepare, check, protect, ask for help, and keep practicing.
- Use technology for small safe tasks first, then slowly build confidence.
- For health, money, government, legal, and safety information, AI is a helper, not the final authority.
- Protect private information before asking any digital tool for help.
- Use the pause-check-confirm habit before clicking, paying, sharing, or replying.

Japan-Focused Practice Contexts

Use familiar examples so the lesson feels connected to real life: weekly LINE family check-in, PayPay/Rakuten purchase check, Mercari safe selling routine, MUFG or SMBC official login habit, Japan Post

M25 Module Quiz - Digital Life Mastery

1. What is the safest first step when learning a new digital tool?
2. What is a hallucination?
3. Which topics require extra checking?
4. Why should you not paste a one-time password into an AI chat?
5. What should you do before clicking a link in a scary LINE message?
6. How can weekly LINE family check-in be used safely in practice?
7. What does "official source" mean?
8. Why should important AI answers be checked with two sources?
9. What is a good prompt for a beginner?
10. What should you do if the AI answer is too difficult?
11. What is the pause-check-confirm habit?
12. Why should seniors avoid rushing when using digital services?
13. What can AI safely help with?
14. What should AI not replace?
15. What should a learner record after practice?
16. Why is travel planning a good AI practice topic?
17. Why is shopping assistance useful but risky?
18. How should health information be handled?
19. What should you do if a voice or video message asks for money urgently?
20. What is the final goal of this module?

M25 Practical Assessment - Digital Life Mastery

Assessment Goal

The learner will show that they can use this module's skills for a realistic daily situation while protecting privacy and checking important information.

Scenario

The learner is preparing for a normal week in Japan. They may need to read a message, plan a small trip, compare a product, understand a notice, or ask for help with a digital service. Practice examples may include weekly LINE family check-in, PayPay/Rakuten purchase check, Mercari safe selling routine, and MUFG or SMBC official login habit.

Task A - Safe Prompt or Search

1. Choose one realistic task.
2. Remove private details from the task.
3. Ask the AI or digital tool for simple step-by-step help.
4. Ask one follow-up question to make the answer easier.
5. Write the final useful steps in a notebook.

Task B - Verification

1. Identify whether the answer includes health, money, government, legal, identity, or safety information.
2. If yes, name the official source or professional who must confirm it.
3. If no, still check one detail such as date, price, address, route, or sender.
4. Explain what could go wrong if the answer was wrong.

Task C - Privacy Check

Before finishing, the learner must say whether they shared any of the following: password, PIN, one-time code, My Number, bank account details, health insurance details, private medical details, full address, or photo of an important document. The correct assessment behavior is

M25 Flashcards - Digital Life Mastery

Use these flashcards for review. Read the front first. Try to answer. Then check the back.

- AI: A computer system that can recognize patterns, make suggestions, or generate text, images, or answers. - Prompt: The instruction or question you type or say to an AI tool. - Context: Background details that help the tool give a better answer. - Hallucination: A confident answer that may be wrong or invented. - Verification: Checking important information before acting. - Official source: The real website, app, paper notice, phone number, or office for an organization. - Private information: Data that can identify you, access your account, or harm you if shared. - Deepfake: A fake or manipulated image, video, or voice that may look or sound real. - Fact-checking: The process of checking if a claim is true, false, outdated, or missing context. - Pause-check-confirm: Stop first, check the risk and source, then confirm before acting. - Two-source rule: Use two reliable sources for important claims. - Trusted helper: A family member, teacher, bank staff, doctor, government office, or other safe person who can help verify. - Safe practice: Using fake or non-private examples while learning. - Digital routine: A repeated set of safe habits for updates,

M25 Cheat Sheet - Digital Life Mastery

Safe AI and Digital Tool Formula

Goal + Context + Format + Safety

Example prompt:

> I am a senior beginner. Help me with [task]. Use simple English. Give step-by-step instructions. Do not ask for private information. Tell me what I must verify.

Use AI For

- Explaining difficult words.
- Translating ordinary messages.
- Planning travel ideas.
- Making shopping comparison checklists.
- Drafting polite messages.
- Summarizing long text.
- Preparing questions for a doctor, bank, or government office.

- ## ## Do Not Use AI As The Final Authority For

- ## ## Never Share Casually

- ## ## Pause-Check-Confirm

...

These short reminders support slow review after the main lessons. They are intentionally simple because senior learners often benefit from calm repeated practice.
